# **Data Acquisition from Distributed Power Plants and Integration into the Business Intelligence System**

Presented by **Dr. Zijad Lemeš, ENTEGA**

# Agenda

- ENTEGA AG - a brief overview
- How we monitor our power plants at present
- Motivation for centralized data acquisition system
- System set-up and architecture
- Summary and outlook

# ENTEGA AG – A Brief Overview

## Portrait

We are **one of the biggest regional suppliers** in Germany.

With our subsidiaries and shareholdings, we cover **the entire value-added chain** of a **sustainable energy supply and modern fundamental public services**.

Our sales subsidiary ENTEGA is one of the **biggest suppliers of carbon-neutral energy in Germany**.

We are investing considerable amounts in the energy turnaround. So far we have invested **850 million € in renewable energy** and gas power stations with low environmental impact.

Our aim: By 2020, we wish to generate all the green power consumed by our ENTEGA private customers from our own plants – this is equivalent to approximately **1.1 billion kWh per year**.

We supply electricity and natural gas to over **600,000 customers**.

The ENTEGA group currently employs about **2,000 persons** – among them **90 trainees**.

# ENTEGA AG – A Brief Overview

## Our Fields of Activity

### Generation

Energy production with low environmental impact from regenerative energy sources and from efficient gas power and heating plants. Heat and contracting

### Trading

Energy trading, portfolio and energy accounting management, direct marketing of power and biogas under the Renewable Energy Act

### Sales

Sales of electricity, natural gas, heat, CO2 compensation solutions, telecommunication services and energy efficiency solutions

## ENTEGA AG

### Networks

Construction and operation of energy and drinking-water networks, energy generation plants, street lighting and traffic installations

### Operation of Public Services

Supply of drinking water, waste water treatment, burning waste, biomass and materials recycling

### Shared Services

Measurement, invoicing and IT services for the energy sector

**Corporate Social Responsibility: ENTEGA Stiftung, ENTEGA NATURpur Institut**

# ENTEGA AG – A Brief Overview

## Key Figures for 2015

Group turnover **1,592.7 million €**

Number of **employees 2,046**

Sales of **electricity 8.8 billion kWh\***

Sales of **natural gas 4.7 billion kWh\***

Sales of **drinking water 13.5 million m<sup>3</sup>**

Amount of **treated waste water 13.7 million m<sup>3</sup>**

Amount of **garbage disposal 209,186 t**

\*Supplies to customers and traded quantities

# ENTEGA AG – A Brief Overview

## Key Figures for 2015

### Renewable Energies

Capacity aim ~ **1.1 billion kWh**

Plant capacity under construction/in operation ~ **255 MW**

Sales of **carbon-neutral natural gas 2.12 billion kWh**

Sales of **green electricity 2.57 billion kWh**

**CO<sub>2</sub> emissions** compensated by carbon-neutral natural gas **444,613 t CO<sub>2</sub>e**

**Energy efficiency potential** identified in consulting projects **7,730 MWh**

# ENTEGA AG – A Brief Overview

## Renewable Power Plants

### Renewable energy sources

11 wind parks

3 solar parks

2 biogas plants

130 PV plants

Currently 255 MW, with  
annual production of  
approx. 700 GWh

# ENTEGA AG – A Brief Overview

## Conventional Power Plants

We also operate several heat plants and heat & power plants in south Hessen.

# ENTEGA AG – A Brief Overview

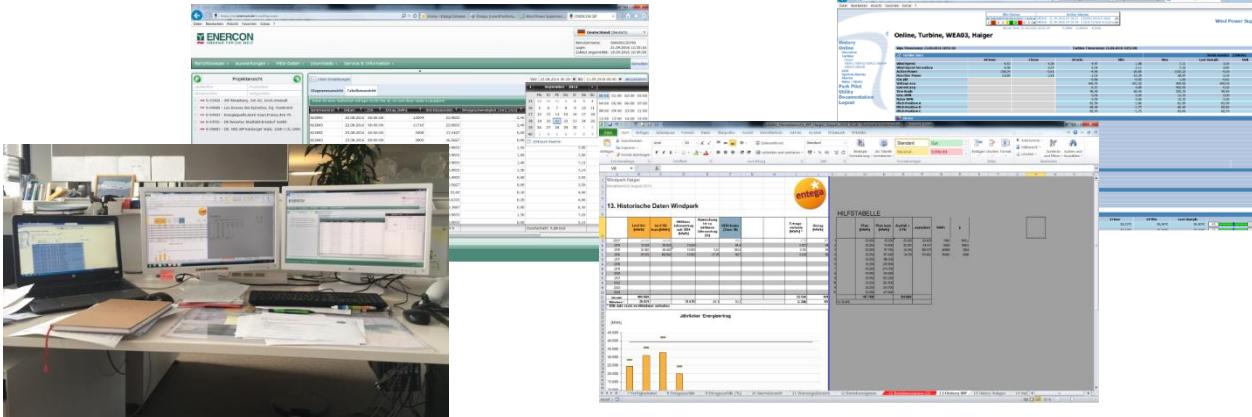

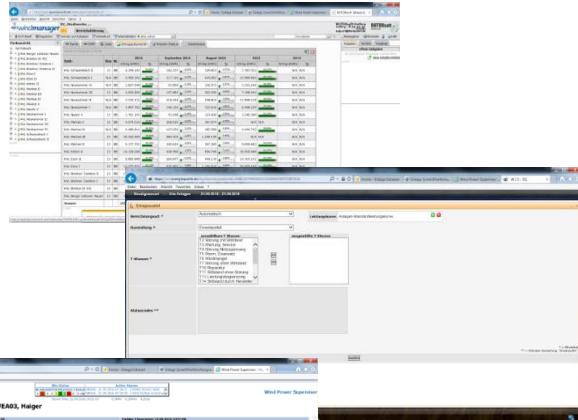

## Our Grid

Electricity	9,112 km
Natural gas	2,484 km
Drinking water	944 km
Telecommunications	4,442 km
Heat	80 km

# How we monitor our power plants at present

- Different SCADA systems for monitoring and for download raw data
- Excel tool for analyses (failure, benchmark, etc.) and reports (monthly, weekly)

# Motivation for centralized data acquisition system

- Digitalization and interconnection as a basis for future-oriented operation management and optimization of working processes
- Holistic and integrated solution have the advantage that the data from different technologies (Wind, PV, Biogas, Gas Turbines, etc.) and from different manufacturers can be analyzed, archived and exported to other applications using only one tool
- Powerful data base allows storing of big data amounts at different temporal resolutions
- Automated generation of important information and KPIs and comprehensive data analysis

# System set-up and architecture

## Project Team

Requirements and technology specific implementation

Hardware, implementation and operation

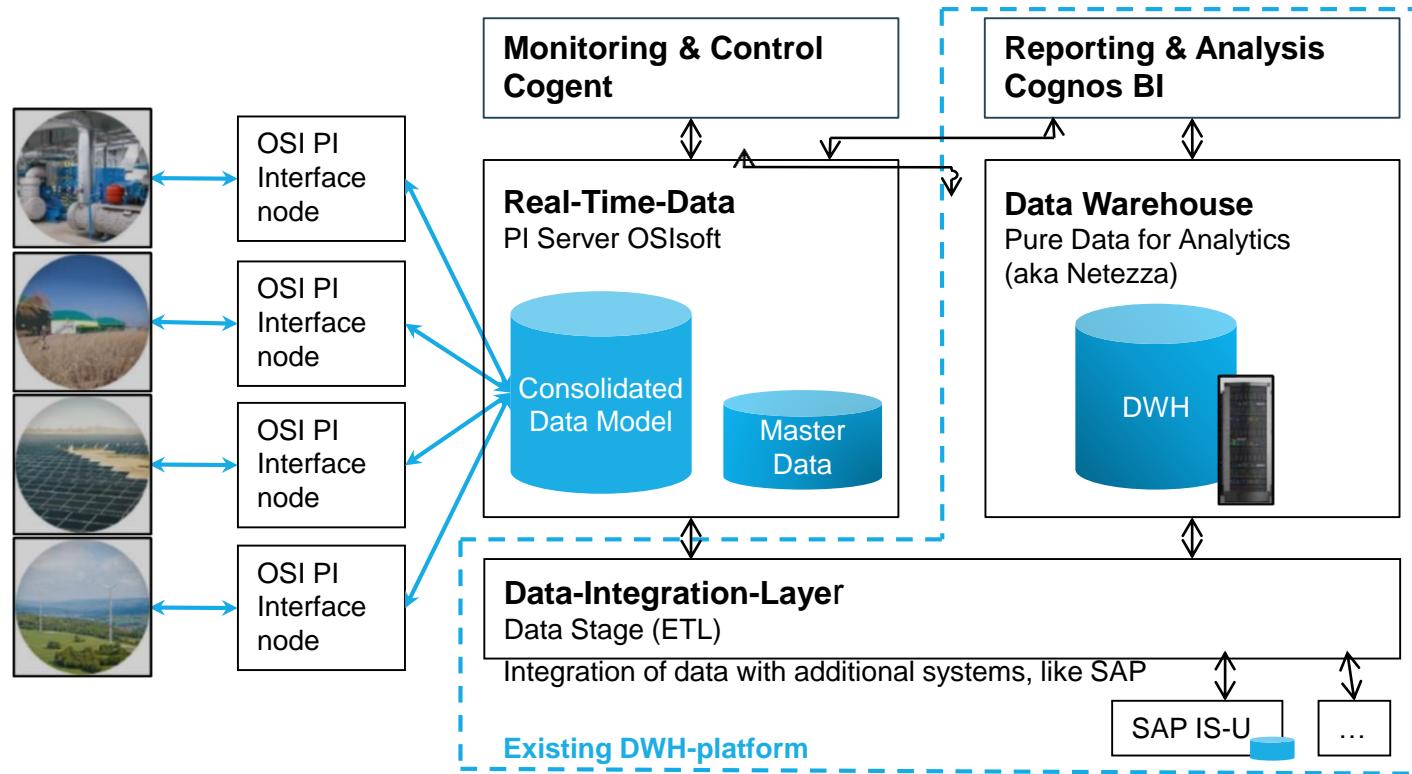

Software

Implementation

# System set-up and architecture

# System set-up and architecture

## PI Interface nodes

- OPC XML DA and OPC XML interfaces
  - Used to connect wind farms of the manufacturers Vestas, Siemens and Enercon
- Modbus interface
  - Used to connect PV farms of the manufacturer SMA
- UFL interface
  - Used to connect sites communicating per structured text data like biogas plants and PV farms and other sources like historical data, production forecast, etc.
- One license allows multiple instances at one server
  - Security is ensured with a VPN Site to Site link

# System set-up and architecture

## Procedure of a site connection

1. Establishing a technical connection between OSIsoft PI Server and the site (OPC, Modbus, FTP, WebService, etc.)
2. Mapping of site data to allow a homogenous storage and processing
3. Build the site in the monitoring tool Cogent
4. Introducing the data into the analyzing tool Cognos BI
5. Creation or rather adaption of reports

# System set-up and architecture

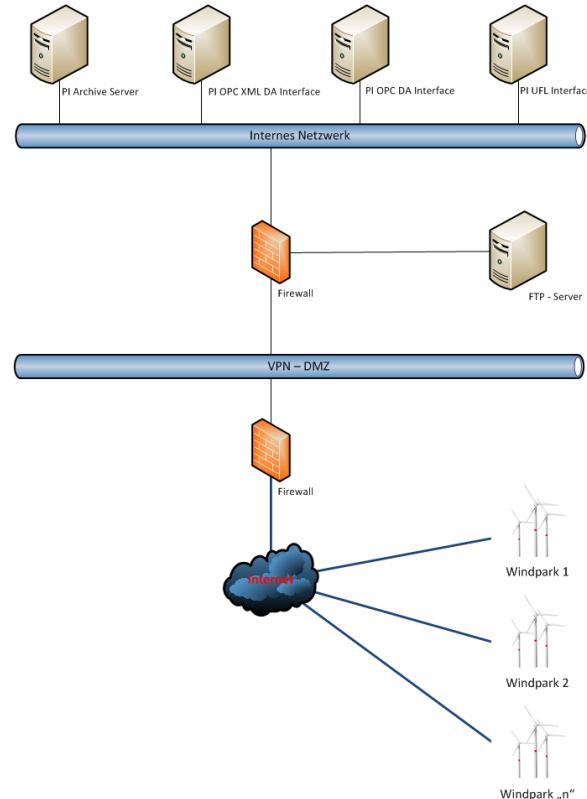

## Procedure of a site connection

Data transfer via FTP:

- Checking of data which were delivered from the plant
- Configuration of PI UFL Interface for the certain plant

Site-To-Site coupling:

- Checking of plant connection possible (UMTS or DSL)
- Configuration of VPN router and installation of the VPN router on site
- Checking of communication between PI Interface Server and SCADA Server in the plant possible
- Configuration of the interface for the plant

# System set-up and architecture

## Data mapping and creation of tags in PI Builder

Marking of tags to apply or to edit

Name of tags in PI Server

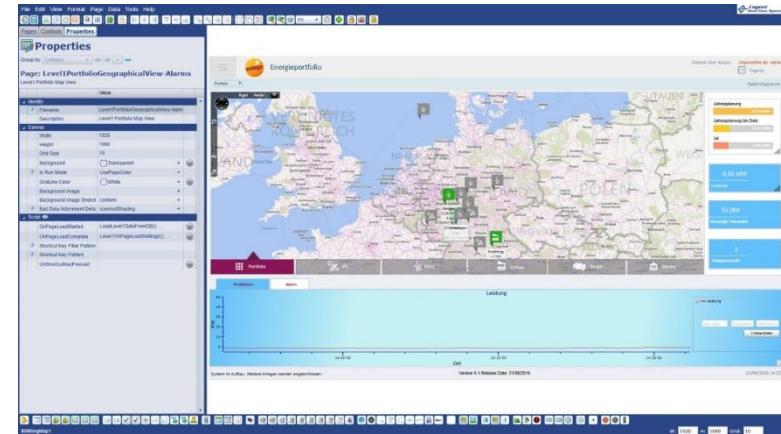

Instrument tag in the plant

1 Selected(x)	Name	ObjectType	Description	displaydigits	engunits	future	pointsource	pointtype	ptclassname	instrumenttag
2 x	WI001-GM0001-M5600	PIPoint	State indication from Wps. Coding	-5	Integer	0	XML	Int32	classic	GMS.ION1.WpsStatus
3 x	WI001-GM0001-M5601	PIPoint	Date and time for Grid station	-5	Date	0	XML	String	classic	GMS.ION1.Date
4 x	WI001-GM0001-M5602	PIPoint	Active Power Production	-5	MW	0	XML	Float64	classic	GMS.ION1.ActivePower
5 x	WI001-GM0001-M5603	PIPoint	Reactive Power Production	-5	MVar	0	XML	Float64	classic	GMS.ION1.ReactivePower
6 x	WI001-GM0001-M5604	PIPoint	Active Energy Export total	-10	kWh	0	XML	Int32	classic	GMS.ION1.ActiveEnergyEx
7 x	WI001-GM0001-M5605	PIPoint	Reactive Energy Export total	-10	kVArh	0	XML	Int32	classic	GMS.ION1.ReactiveEnergy
8 x	WI001-GM0001-M5606	PIPoint	Active Energy Import total	-10	kWh	0	XML	Int32	classic	GMS.ION1.ActiveEnergyIn
9 x	WI001-GM0001-M5607	PIPoint	Reactive Energy Import total	-10	kVArh	0	XML	Int32	classic	GMS.ION1.ReactiveEnergy
10	WI001-GM0001-M5608	PIPoint	Frequency	-5	Hz	0	XML	Float64	classic	GMS.ION1.Frequency
11	WI001-GM0001-M5609	PIPoint	Total Harmonic Distortion	-5	%	0	XML	Float64	classic	GMS.ION1.THD
12	WI001-GM0001-M5610	PIPoint	Voltage Phase U	-5	kV	0	XML	Int32	classic	GMS.ION1.VoltageU
13	WI001-GM0001-M5611	PIPoint	Voltage Phase V	-5	kV	0	XML	Int32	classic	GMS.ION1.VoltageV
14	WI001-GM0001-M5612	PIPoint	Voltage Phase W	-5	kV	0	XML	Int32	classic	GMS.ION1.VoltageW
15	WI001-GM0001-M5613	PIPoint	Current Phase U	-5	A	0	XML	Int32	classic	GMS.ION1.CurrentU
16	WI001-GM0001-M5614	PIPoint	Current Phase V	-5	A	0	XML	Int32	classic	GMS.ION1.CurrentV
17	WI001-GM0001-M5615	PIPoint	Current Phase W	-5	A	0	XML	Int32	classic	GMS.ION1.CurrentW

# System set-up and architecture

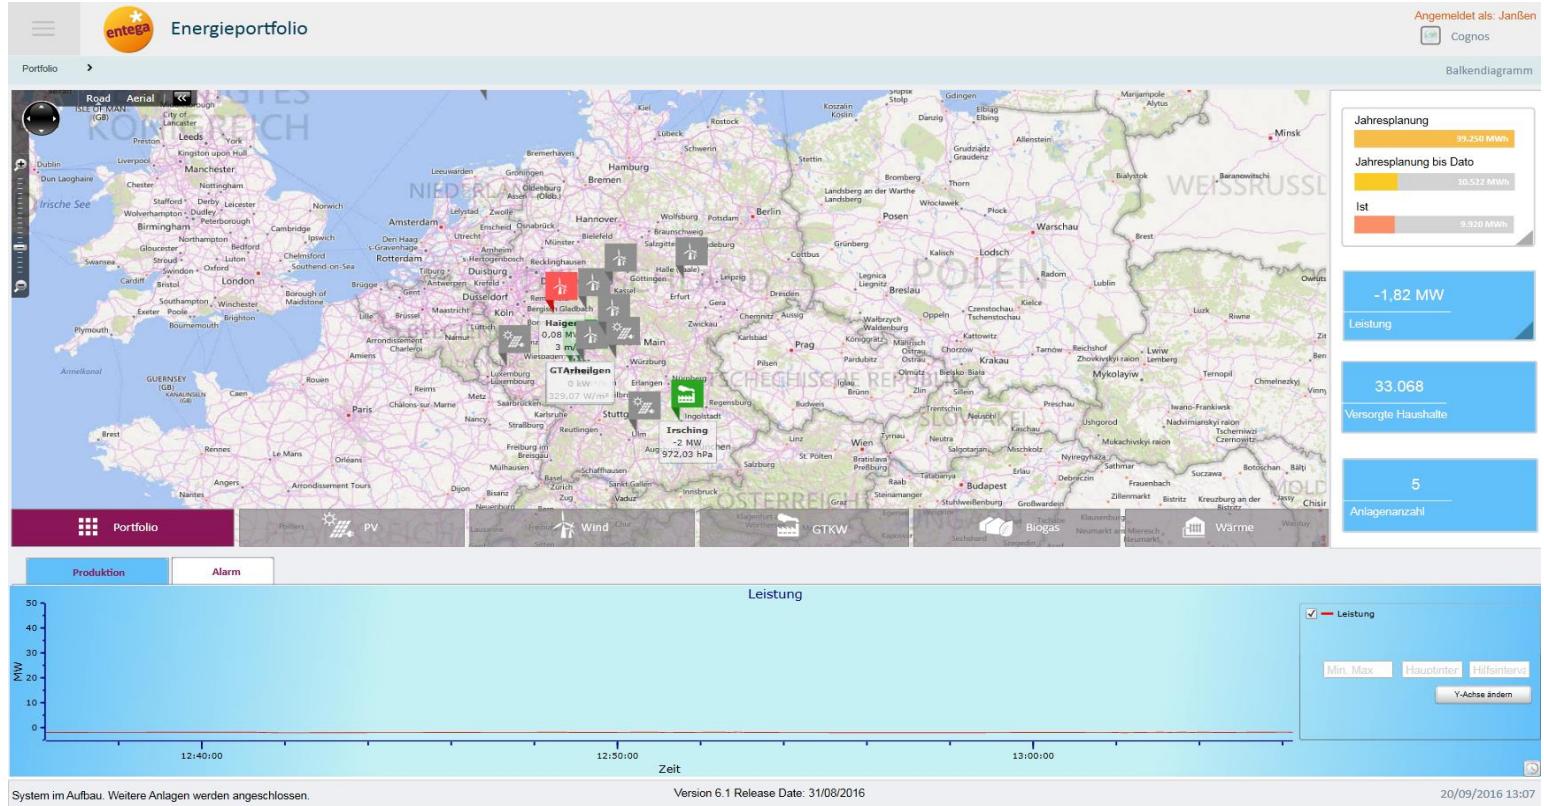

## Monitoring

- Cogent is directly linked to OSIsoft PI Server
- Web-based solution
- Access control is implemented, also for external user
- Main features
  - Alarm handling
  - Online values
  - Most important KPIs
  - History of last three days
  - Forecast

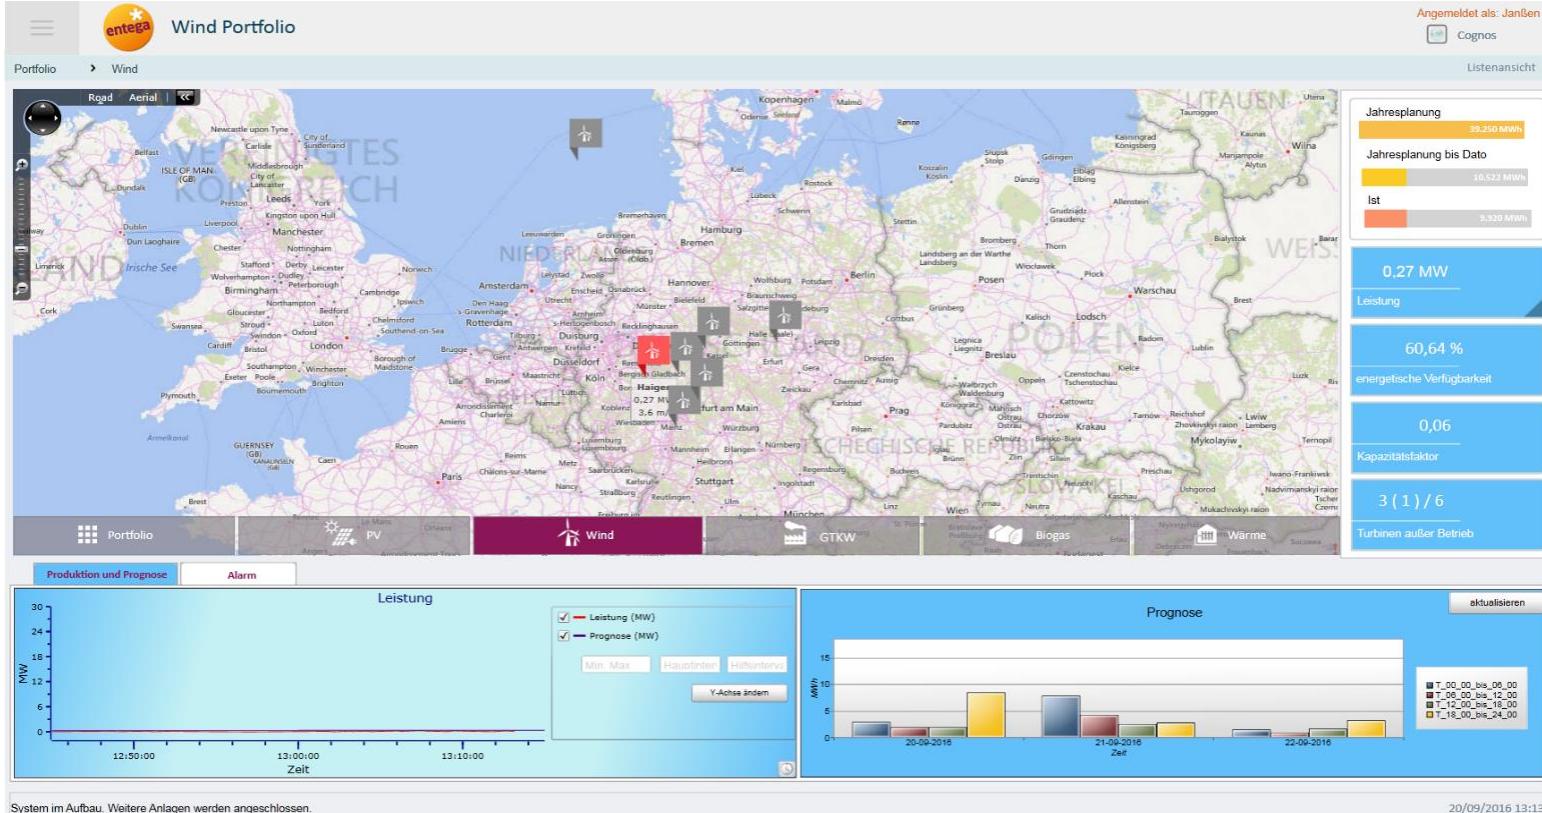

# System set-up and architecture

## Dashboard Portfolio

# System set-up and architecture

## Dashboard – Wind Level

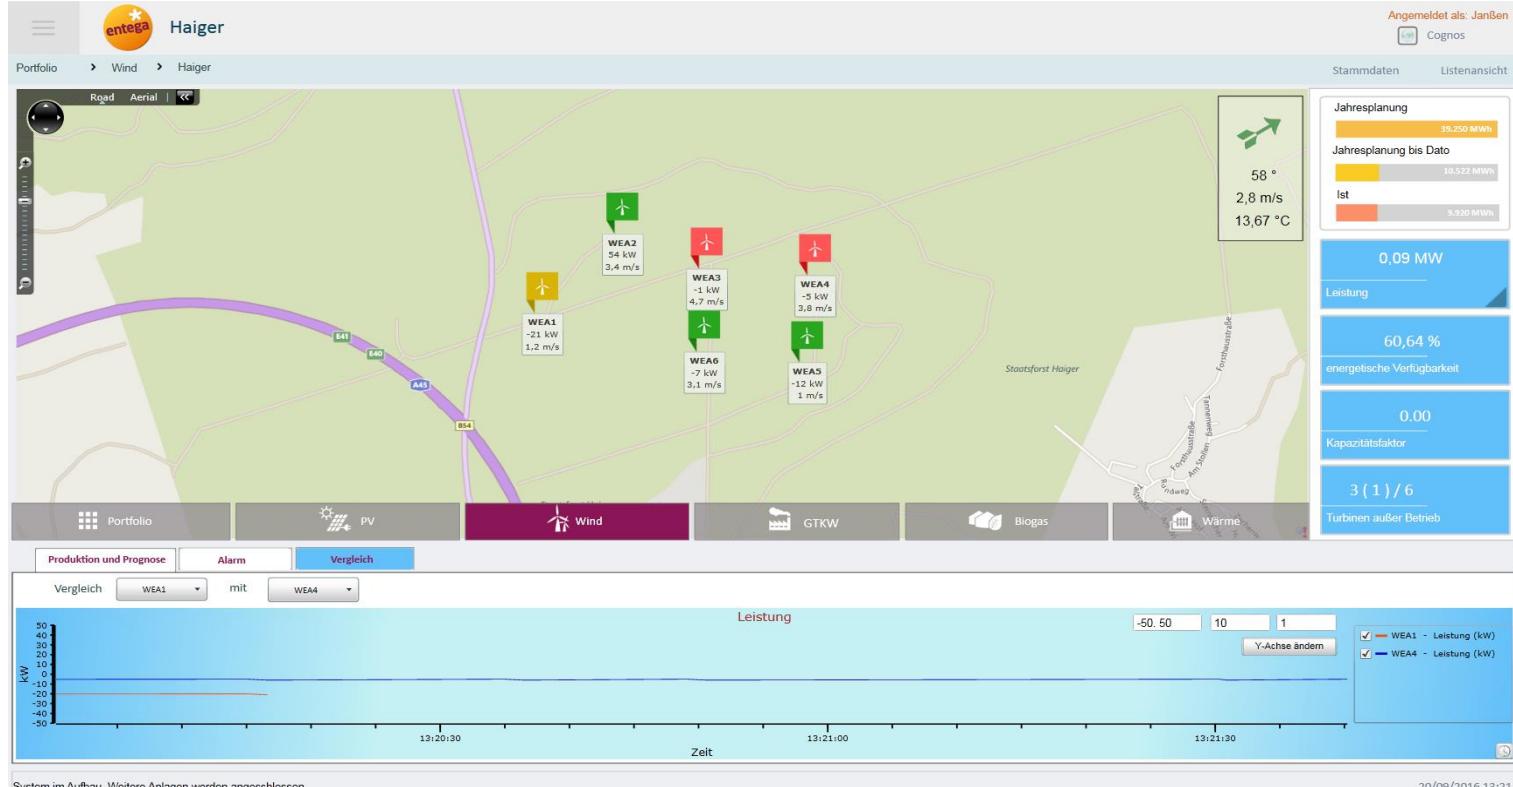

System im Aufbau. Weitere Anlagen werden angeschlossen.

## Alarm Handling

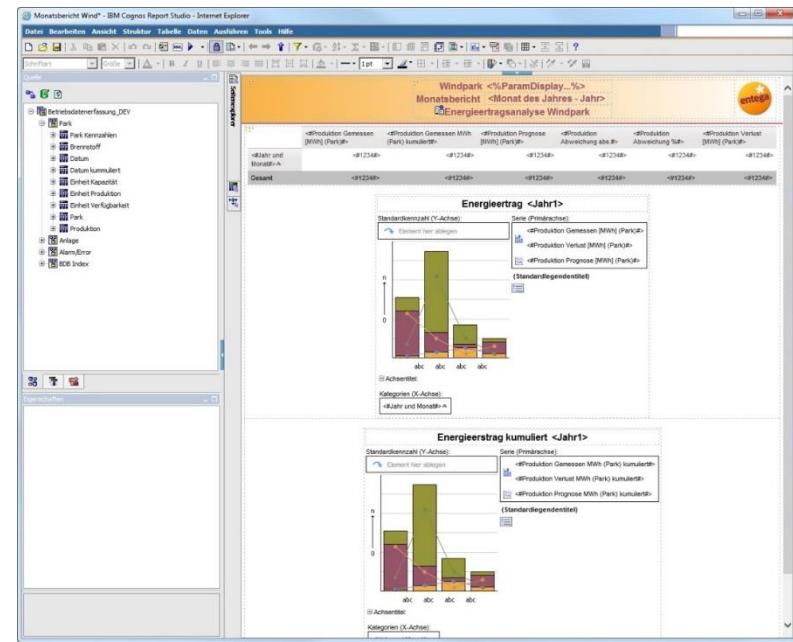

- Alarm occurs if there is a change in the status from faultless to failure or to no communication
- Get information about all alarms which are coming up during the time until the status changed back to faultless
- Decide if alarm should be reported or not and attach a comment

The screenshot shows a software interface for managing alarms. On the left, a table lists various error codes with their start times and descriptions. A specific entry for error code 1022 is highlighted. On the right, a modal window titled "Ausgewählte Fehler" displays the selected error code 1022, which is described as "Local scheduled service work". Below this, a section titled "Bemerkungen" contains a note: "08:30 Uhr Serviceteam (Kallemeier) angemeldet: Retracts, Rauchmeldertausch und Leiterarreitung". At the bottom, another table provides details for the selected error code, including confirmation status, reporting status, start and end times, and relevant information like "Turbine in local operation".

# System set-up and architecture

## Analysis and Reporting Tool – Cognos

- Comprehensive, individual and customized configurations of standardized or ad-hoc reports
- Automatically preparation and distribution by mail as html, pdf or xls based on time, events or ad-hoc
- Extensive, multidimensional ad-hoc request for analysis errors or benchmarking the portfolio among each other
- Web-based and thereby mobile and standardized work area

# Summary and Outlook

- From different standalone solutions to one integrated system with the link to BI and so the possibility to enlarge the reporting and bring the technical and commercial world together, but...
  - every site is really unique with its special efforts concerning the hardware and software, unfortunately not too much copy and paste possible
  - different players with different needs need to be satisfied, comprehensive coordination process is very important and indispensable
- Digitalize processes: Establish automated data analysis, generate and exchange KPIs, information and recommendation with operator, service teams, manufacturers, controllers, etc.
