Digital Enterprise

- Increase Enterprise Awareness
- Make Your Digital Data a Real
 Asset
- Transform Your Business

Industry Challenges

- Industry Consolidation
- Data Explosion
- Virtual Asset Teams
- Real-Time Enterprise
- Next-generation simulation
- Improved visualization
- Increased integration & automation

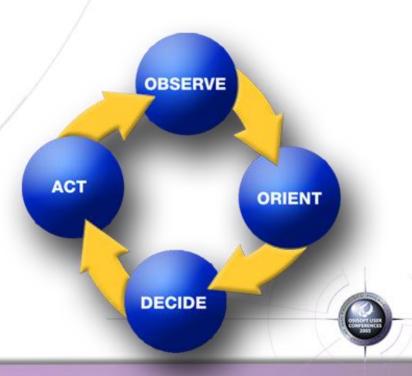

Digital Oil Opportunities

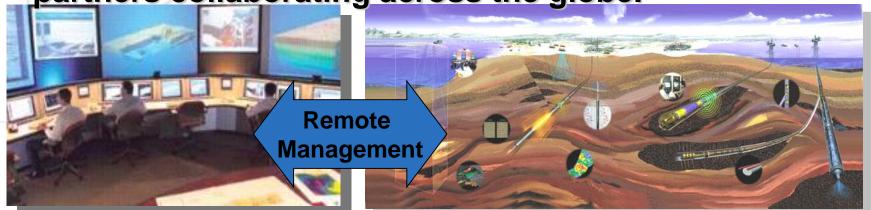

- Simulation & On Demand Computing
- Visualization
- Remote Operation
- Field Automation
- Systems Integration SOE

- Surveillance
- Command & Control
- e-Worker Knowledge Management
- Communications
- Extended to Partners

Game Changing: The Digital Oilfield

Information technology will transform the upstream business into a virtual organization of partners collaborating across the globe.

Architectures

PREVIOUS ARCHITECTURE/SOLUTIONS

RISC Replacement

IA-32
Architecture

TRANSITION BENEFITS

Exceptional performance – choice of operating system, software & hardware vendors

64-bit support, great performance for 32-bit apps

ARCHITECTURE OF CHOICE

Intel is driving 64-bit computing from datacenter to desktop

Announcing Next MP Server Platform

64-BIT MP COMPUTING

Manipulate large datasets

PLATFORM TECHNOLOGIES

DDR2-400 Memory - Advanced RAS features - PCI Express I/O - Demand Based Switching

PLATFORM LONGEVITY

Architected for Dual Core Virtualization Technology Ready

Launching New 2005 MP

Platform

CUSTOMER REQUIREMENTS

Platform longevity Scaling application performance

Ability to manipulate large datasets

High levels of reliability and serviceability to increase server uptime

High bandwidth I/O subsystems

Lower utility costs and ability to use existing infrastructure

BENEFITS

ARCHITECTED for DUAL CORE

667MHz dual FSB **Ready for Virtualization Technology**

> 64-bit computing **DDR2-400 Memory**

Additional advanced RAS features vs. **DP** servers

PCI Express* I/O

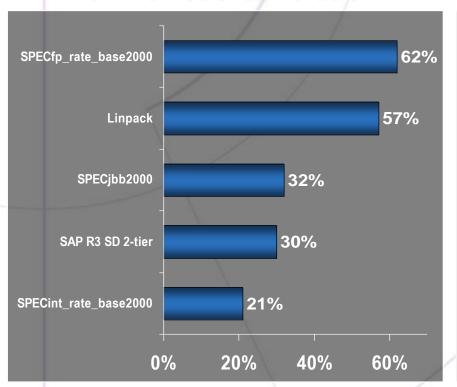

Demand Based Switching with Enhanced Intel SpeedStep® Technology

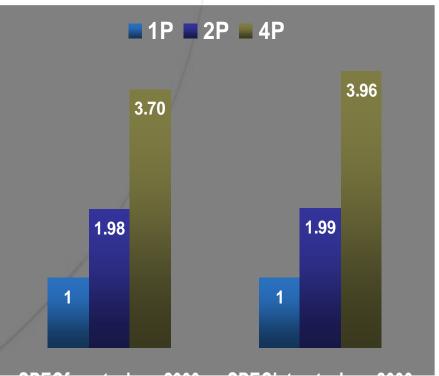

Intel® Xeon™ Processor MP

Performance

Vs. Previous Generation

Scalability

Up to 62% performance improvement

MP Platform Reliability, Availability and Serviceability (RAS) Features

Error-correcting system bus†

X8 single device data correction

Additional RAS features* keep
MP platforms
up and running
