

# **Cyber Security and Using OSISOFT to Become Compliant**

**William E. McEvoy, Northeast Utilities**  
Transmission Information Technology Business  
Service Manager

**Dennis K. Kilgore, DLL Solutions, Inc.**  
President

# Northeast Utilities - Background

- Fortune 500 diversified energy company located in Connecticut with operations throughout the Northeast
- Serving customers Connecticut, Western Massachusetts, and New Hampshire

Electrical Distribution  
Service Areas

- Generation, Transmission / Distribution, and Natural Gas subsidiaries

VALUE NOW, VALUE OVER TIME

# Northeast Utilities - Statistics

- Service Territory
  - 11,000+ square miles
  - 2 million+ customers
- Transmission & Distribution
  - 3,000 miles of transmission lines
  - 32,000 miles of distribution lines
  - 513 substations

VALUE NOW, VALUE OVER TIME

# History with OSIsoft

- EMS Upgrade & PI Project – '03 / '04
  - Areva EMS system upgrade
    - CONVEX Control Center in Connecticut
    - PSNH Control Center in New Hampshire
    - 150 miles apart
  - Implement PI at each location to replace legacy historians, backfilling 5 years of data to new PI systems
  - Also implement PI for Transmission Business Unit “centralized” server
  - 150,000 licensed data streams amongst 3 servers

VALUE NOW, VALUE OVER TIME

# Redundancy and Availability

- EMS Redundancy is required for secure operations of the Bulk Power System
  - Both control centers have A&B Systems
- EMS System Availability Statistics are critical to the management of these systems
  - EMS Availability commitment is 99.9%
- Parallel PI servers and API nodes at each site

VALUE NOW, VALUE OVER TIME

# PI in the Control Center – Log Tool

VALUE NOW, VALUE OVER TIME

# PSNH SCADA PI Statistics

- All internal apps use web services and PI-OLEDB
- ~20k streams
  - Value & Status
  - Alarm & Event
  - SOE, using PI BatchFile auto creates tags as needed

VALUE NOW, VALUE OVER TIME

# Who is NERC?

- North American Electric Reliability Council
  - Sets standards for the reliable operation and planning of the bulk electric system
  - Monitors, assesses, and enforces compliance with reliability standards
  - Reliability standards compliance is *currently* voluntary, but the Energy Policy Act of 2005 will change that – soon enough...

VALUE NOW, VALUE OVER TIME

# NERC 1300 Cyber Security Standards

- 41 core “requirements” divided into 8 categories
  - ~3 can benefit through this implementation
  - ~8 must be considered for this system to be compliant
- Effective 1-June-2006
  - Compliance assessment begins in 3Q2007
  - Begin Work, Substantially Compliant, Compliant, and Auditably Compliant
  - Many requirements do not need to be “AC” until 3Q2010

VALUE NOW, VALUE OVER TIME

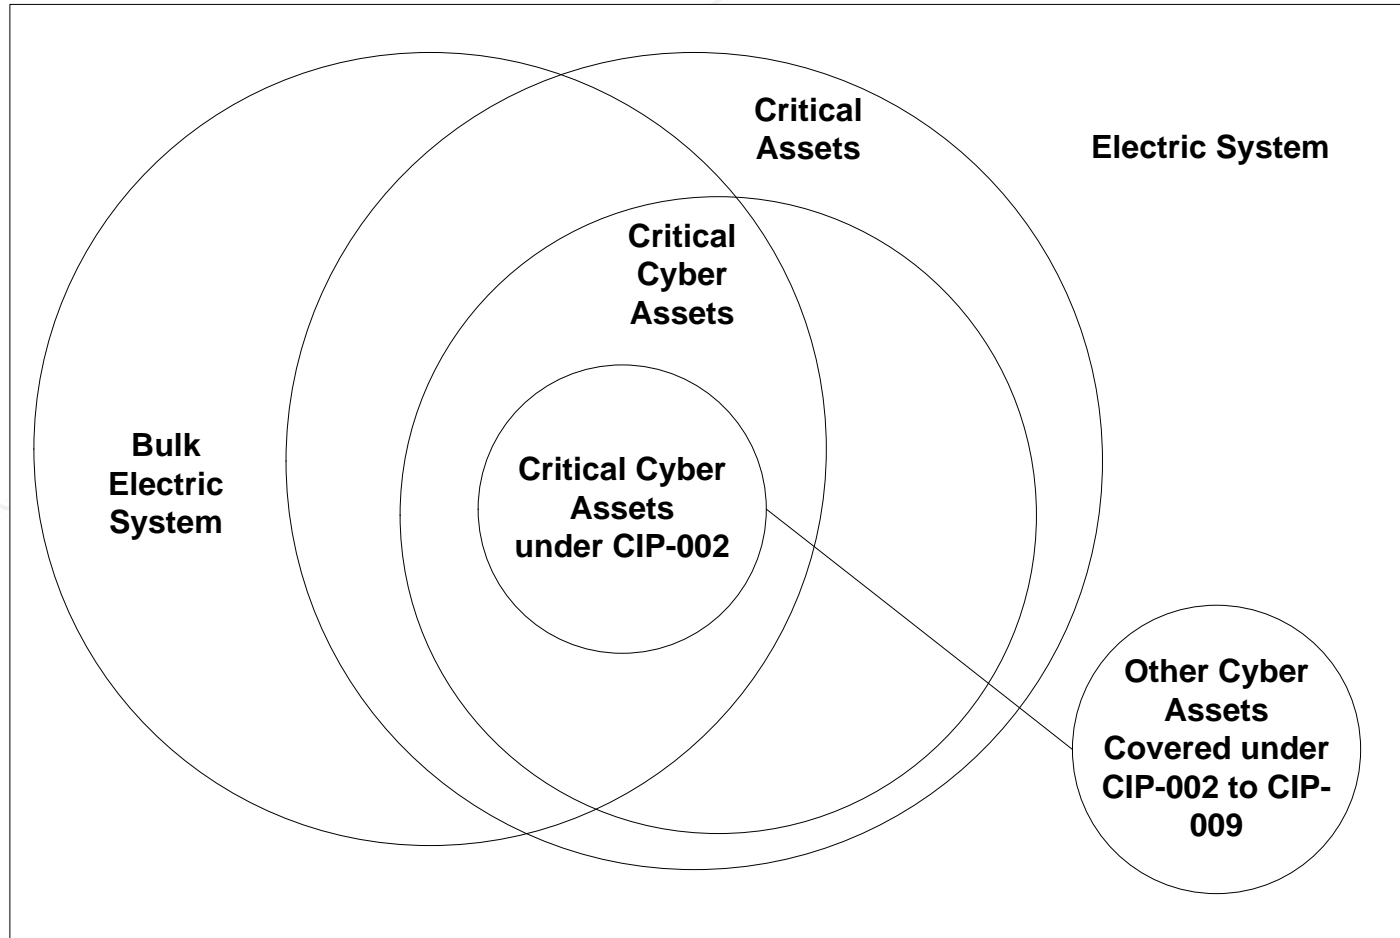

# Critical Infrastructure Protection

CIP #	Title / Scope	Req's
002	Critical Cyber Asset Identification	4
003	Security Management Controls	6
004	Personnel and Training	4
<b>005</b>	<b>Electronic Security</b>	5
006	Physical Security	6
<b>007</b>	<b>Systems Security Management</b>	9
008	Incident Reporting / Response Planning	2
009	Recovery Plans	5

VALUE NOW, VALUE OVER TIME

# Assets Under NERC 1300

VALUE NOW, VALUE OVER TIME

# NU Cyber Security Initiative

- Kicked off it's Cyber Security Compliance Project Team in January 2006
  - Executive Sponsor
  - Oversight Committee
  - Program Manager
  - Critical Asset and Critical Cyber Asset Identification Teams
- Completed CIP-002 Requirements
- Kicking off CIP-003 to CIP-009 compliance teams September 2006

VALUE NOW, VALUE OVER TIME

# IT Monitor Project Objectives

- Provide situational awareness of PSNH ESCC infrastructure health
  - Network equipment, servers, desktops, RTU's
- Support SCADA availability reporting
- Easy navigation through the information
- Tag and display templates to simplify on-going maintenance

VALUE NOW, VALUE OVER TIME

# Project Challenges

- IT vs. the world
  - Access to “their” equipment
- Security Integrity
  - Monitoring it without degrading it
- Actionable Information
  - You can’t watch everything all the time

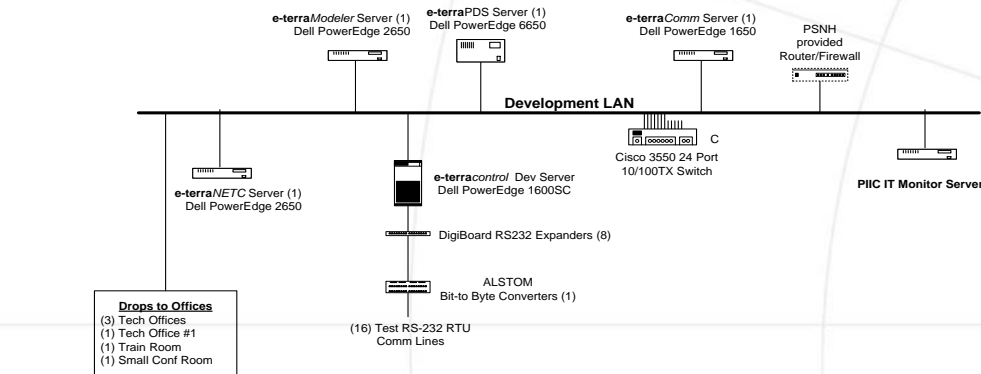

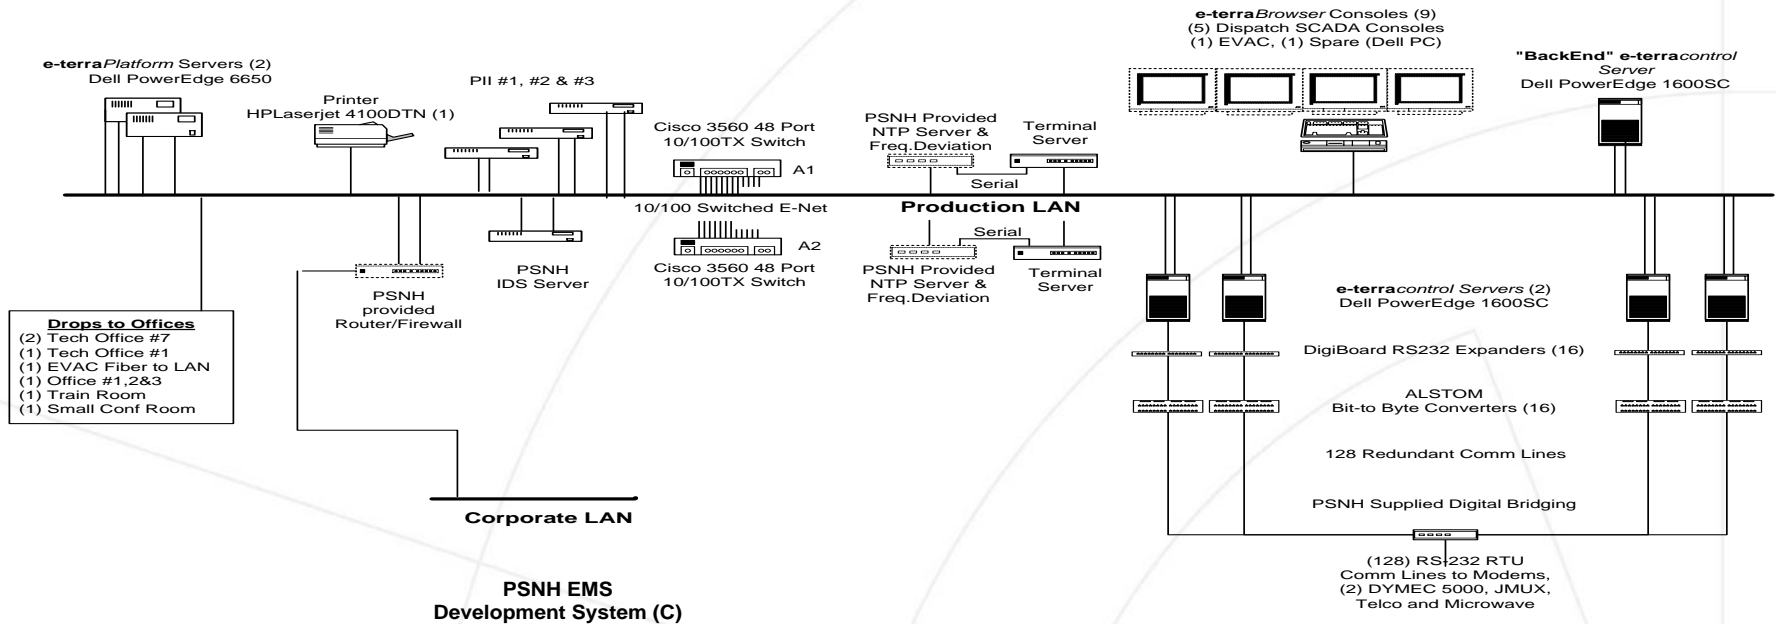

VALUE NOW, VALUE OVER TIME

# SCADA Architecture

ALSTOM

## PSNH EMS Production System (A/B)

VALUE NOW, VALUE OVER TIME

# Industrial Data Center Architecture

- 1 PI Server
  - On the business LAN with the EMS PI servers
  - Also serves as API node for business LAN
- 3 API Nodes
  - Control Center Network
  - Development Network
  - DMZ Network
- ~ 6,000 data streams of IT information

VALUE NOW, VALUE OVER TIME

# IT Monitor Interfaces Being Used

- Performance Monitor
  - A single instance on each API node monitoring all computers on that network
- SNMP
  - “Managed” network devices and computers that don’t support PerfMon
- Ping
  - Simple, periodic, heartbeat metric
- TCP Response
  - Application connectivity for Web, FTP, PI, and IP Terminal Servers
- Windows EventLog
  - Security audit events and critical system messages

**VALUE NOW, VALUE OVER TIME**

# IT Organizer

Site Map

- Corporate Systems
  - Ancillary Servers
  - Network Devices
  - PI Servers
- Development Systems
- DMZ Systems
- Network Devices
- PI Systems
- Production Systems

Monitored Device List (52 Devices)

Configuration Node: [REDACTED]

Update List

Device Name	Last Update Date	Percent Reporting	Total Points	Comment
[REDACTED] PP1 (2)	03/09/2006 3:37:15 PM	99%	153	
[REDACTED] P1 (2)	03/09/2006 3:37:32 PM	88%	156	
[REDACTED] PI11 (1)	03/09/2006 3:37:24 PM	85%	104	
[REDACTED] PI12 (1)	03/09/2006 3:37:25 PM	92%	104

[REDACTED] PI1C (1)	03/09/2006 3:37:32 PM	92%	131	
[REDACTED] PI1D (1)	03/09/2006 3:37:32 PM	94%	131	

Points Roles

Details for [REDACTED] P1

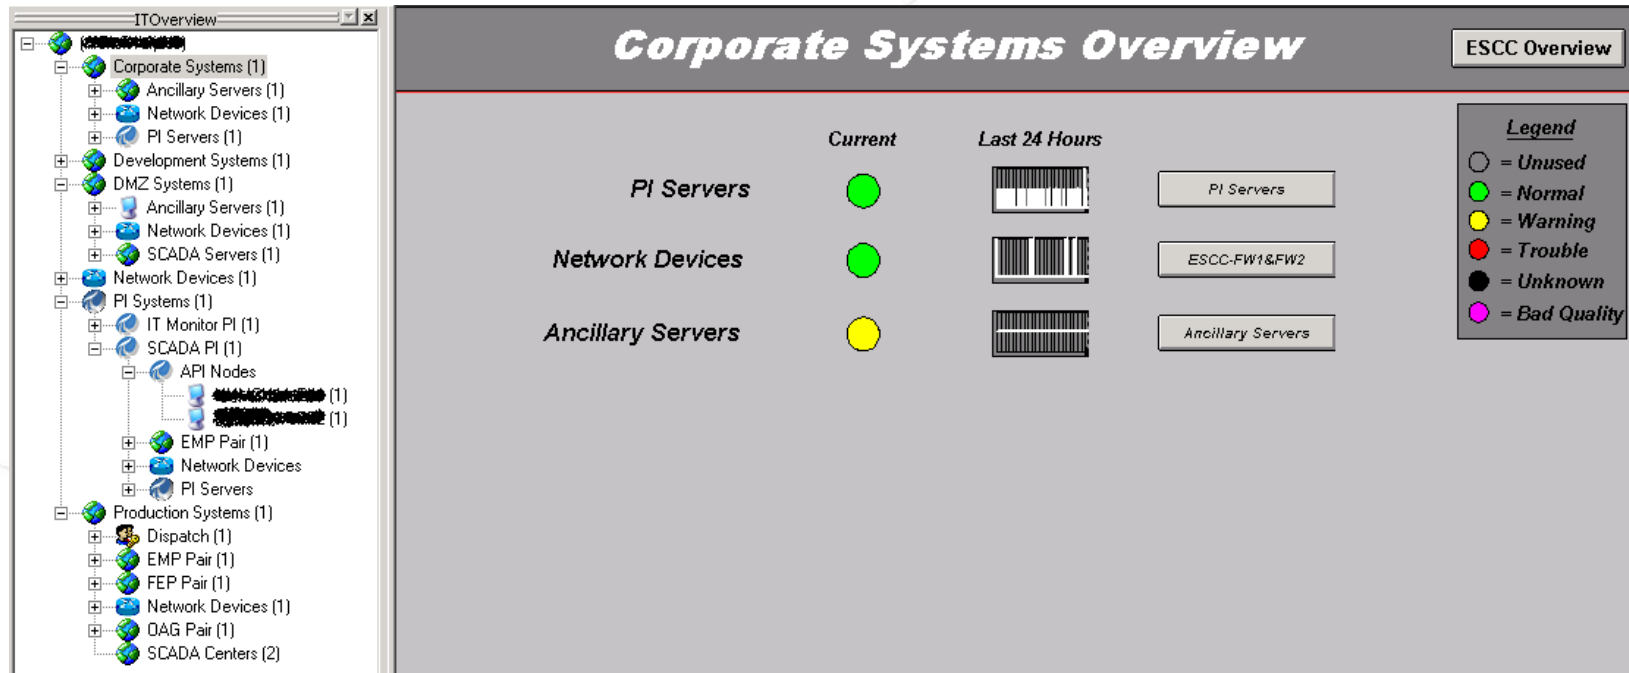

Device Name	Role Name
[REDACTED]	Microsoft Windows 2000,XP,2003
[REDACTED]	Microsoft IIS 6

- Part of the MCN Health Monitor and IT Monitor
  - Integrated into PI-SMT
- Simplifies and centralizes IT Monitor configuration
  - Tag and ProcessBook Display templates
  - Provides “Role” association capability

VALUE NOW, VALUE OVER TIME

# ProcessBook and IT Overview

- Links displays to network elements, greatly simplifying navigation and access to contextual information

VALUE NOW, VALUE OVER TIME

# RtAnalytics Adds Value

- Monitor RTU Communication Link Status
  - We ACE'd it!
  - Created a calculation that generates batches for every service interruption
- Create Actionable Information
  - Analysis Framework does the work
  - Red, Yellow, Green – it's that easy

VALUE NOW, VALUE OVER TIME

# Advanced Computing Engine

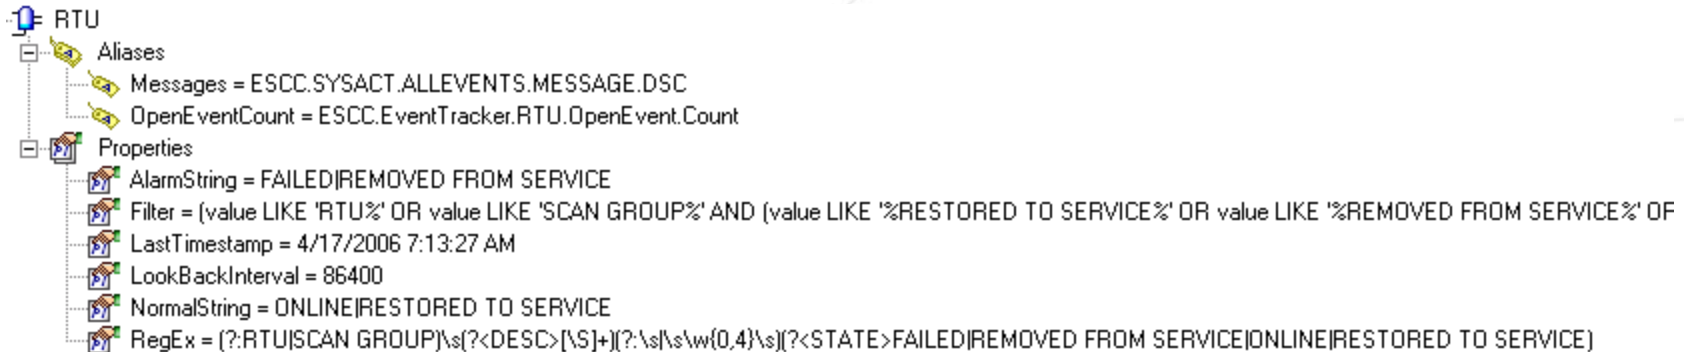

- ACE calculation that uses PI-OLEDB provider
  - Parse EMS SysAct messages in PI string tag
  - Open / Close batches based on trigger messages
- Allows at-a-glance identification of what communications errors currently exist
- Enables analysis and reporting of overall comm. system availability, worst offenders, most intermittent, etc.

VALUE NOW, VALUE OVER TIME

# PI ACE Context Configuration

- Currently 7 contexts parsing messages
- Properties define regular expressions for message parsing, SQL 'where clause' filters, and start-up recovery information

VALUE NOW, VALUE OVER TIME

# Communication Outages Batches

VALUE NOW, VALUE OVER TIME

# Accelerated InfoQuest Charting

VALUE NOW, VALUE OVER TIME

# Analysis Framework to the Rescue!

- AF turns the IT Monitor “instrumentation” data into actionable information!
- Models are used to define dependent relationships and logical groupings
- Every computer process, network device, communication link, and PI subsystem is monitored and has a “Health Rating” tag
- Our custom analysis plug-in calculates a simple “Normal”, “Warning”, “Trouble” health rating
- Maintenance is simple configuration – no coding!

VALUE NOW, VALUE OVER TIME

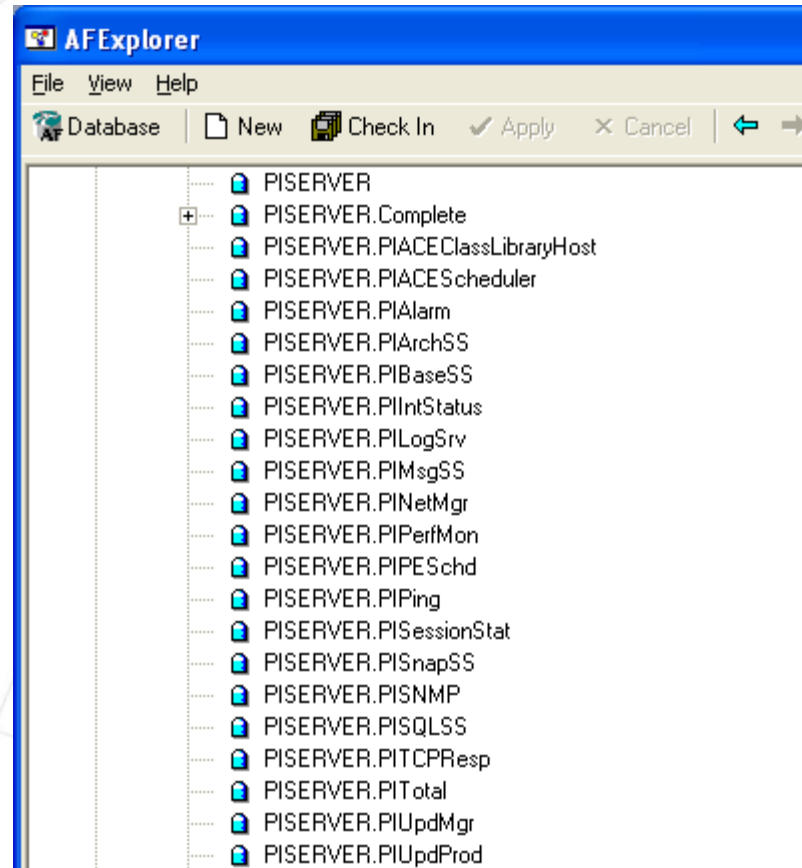

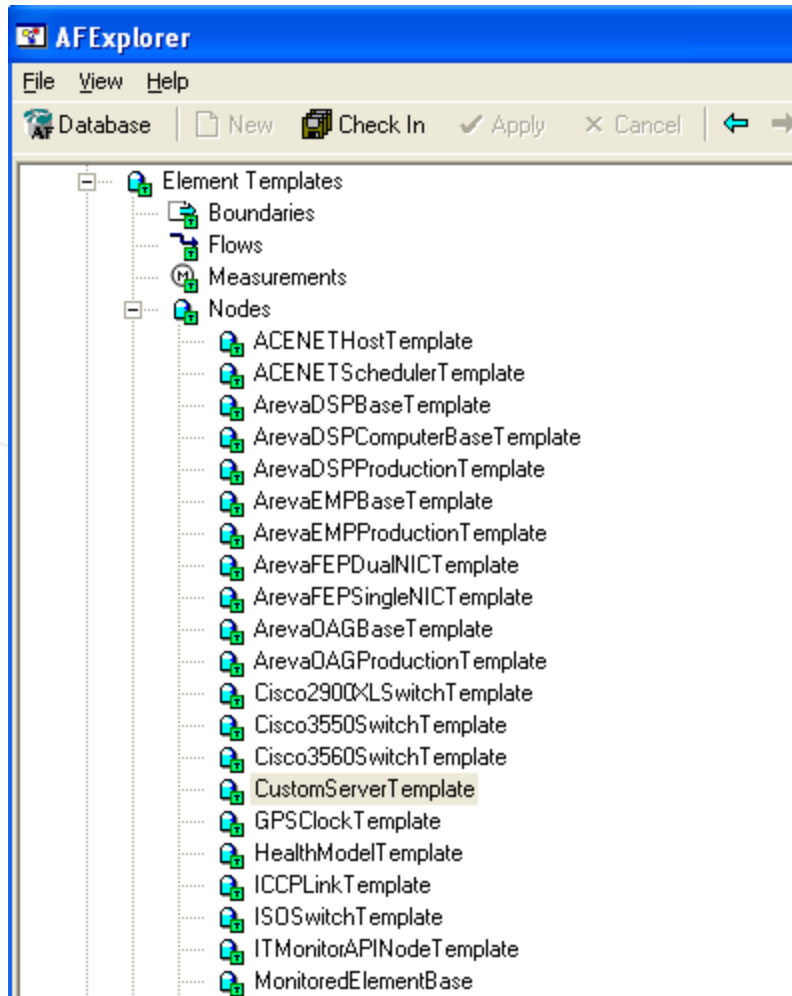

# The Building Blocks of AF

- We defined 45 “Element Templates”
  - Each template is meant to describe a specific device type or process
  - Templates contain “Attributes” which can reference PI Points, Data Tables, or an AF Formula.
  - Attributes support automatic PI Point creation when new elements are created, which meets a core project objective
  - Templates implement “inheritance”
- Virtually every tag in the IT Monitor PI system is mapped to an attribute of an element

VALUE NOW, VALUE OVER TIME

# AF Templates and Elements

VALUE NOW, VALUE OVER TIME

# Element Attributes and Categories

General | Elements | Attributes | Ports | Derived Templates

Cisco3550SwitchTemplate

		Name	Category	Value Type	UDM	Data Reference
		EnvMonFanState1	ReliabilityFactor	String	<None>	PI Point
		EnvMonFanStatusDescr1		String	<None>	PI Point
		EnvMonPresent		String	<None>	PI Point
		EnvMonRedundantSupplyNotification		String	<None>	PI Point
		EnvMonShutdownNotification		String	<None>	PI Point
		EnvMonSupplySource1		String	<None>	PI Point
		EnvMonSupplyState1	ReliabilityFactor	String	<None>	PI Point
		EnvMonSupplyStatusDescr1		String	<None>	PI Point
		EnvMonTemperatureNotification		String	<None>	PI Point
		EnvMonTemperatureState1	ReliabilityFactor	String	<None>	PI Point
		EnvMonTemperatureStatusDescr1		String	<None>	PI Point
		EnvMonVoltageNotification		String	<None>	PI Point
		FastEthernet0-1ifAdminStatus		String	<None>	PI Point
		FastEthernet0-1ifInErrors	ReliabilityFactor	Long	Count	PI Point
		FastEthernet0-1ifInOctets		Double	Count	PI Point

- Analyzed PI values can be interpolated or standard PI summary types (avg, total, min, max, delta, stdev)

VALUE NOW, VALUE OVER TIME

# Health Rating Limits Table

- Simple table to define the warning and trouble limits for each monitored attribute
- Allows the use of generic or specific matching for each element's attributes

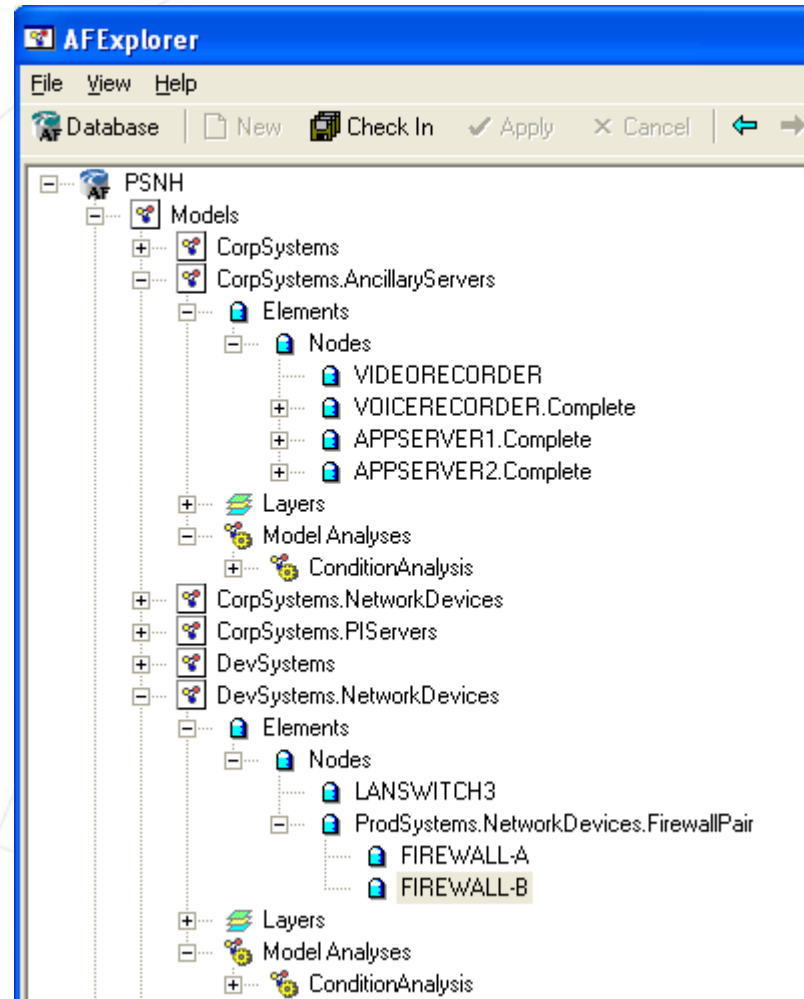

General Table Define Table										
Health Rating Limits										
Model	Element	Template	Attribute	TroubleBelowLimit	WarningBelowLimit	WarningAboveLimit	TroubleAboveLimit	WarningStates	TroubleStates	DataAgeLimit
			APPSETDISABLED	0	0	0	0		True	0
			InterfaceStatus	0	0	0	0		NOT RECEIVING DATA	0
			PAIRAPPSETSTATUS	0	0	0	0	2	3	0
			CompressionRatio	0.05	0.1	0.9	0.95			0
			OverflowQueueCount	-0.1	-0.1	1	2			0
			GPSSatMaxSigStrength	-0.1	-0.1	1	2			0
			FEPPairHealthRating	-0.1	-0.1	2	3			0
			PingLatency	-0.1	-0.1	3	4			0

VALUE NOW, VALUE OVER TIME

# AF Models

- Over 50 “Models”
- The health of EVERY element and model is calculated once per minute
  - Each unique element is only calculated once
- It takes less than 9 seconds to analyze everything
- Excellent integration with ProcessBook!

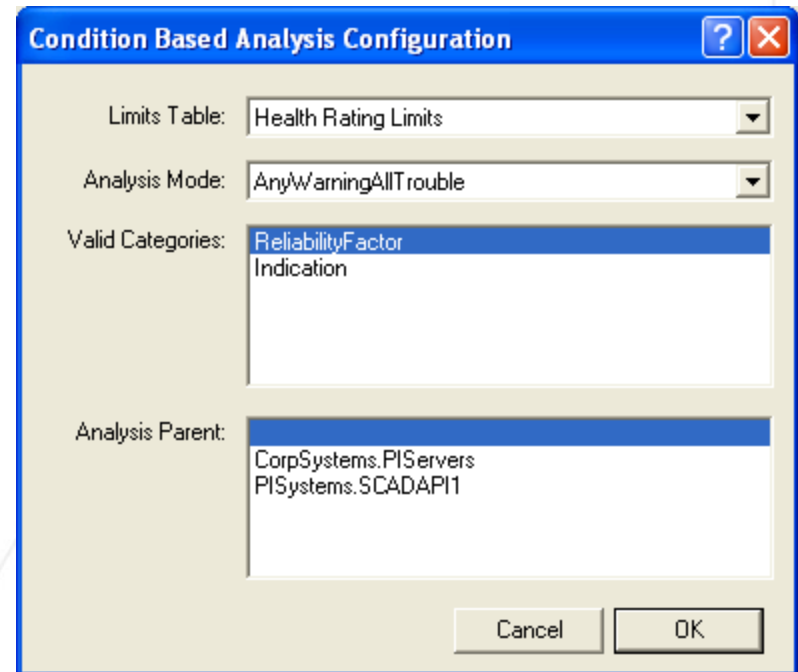

VALUE NOW, VALUE OVER TIME

# Analysis Plug-In Configuration

- Analysis Mode
  - Best Case
  - Worst Case
  - Any Warning All Trouble
  - All Trouble
- Valid Categories
  - Allows selection attribute categories
- Analysis Parent
  - Defines which parent model will control execution

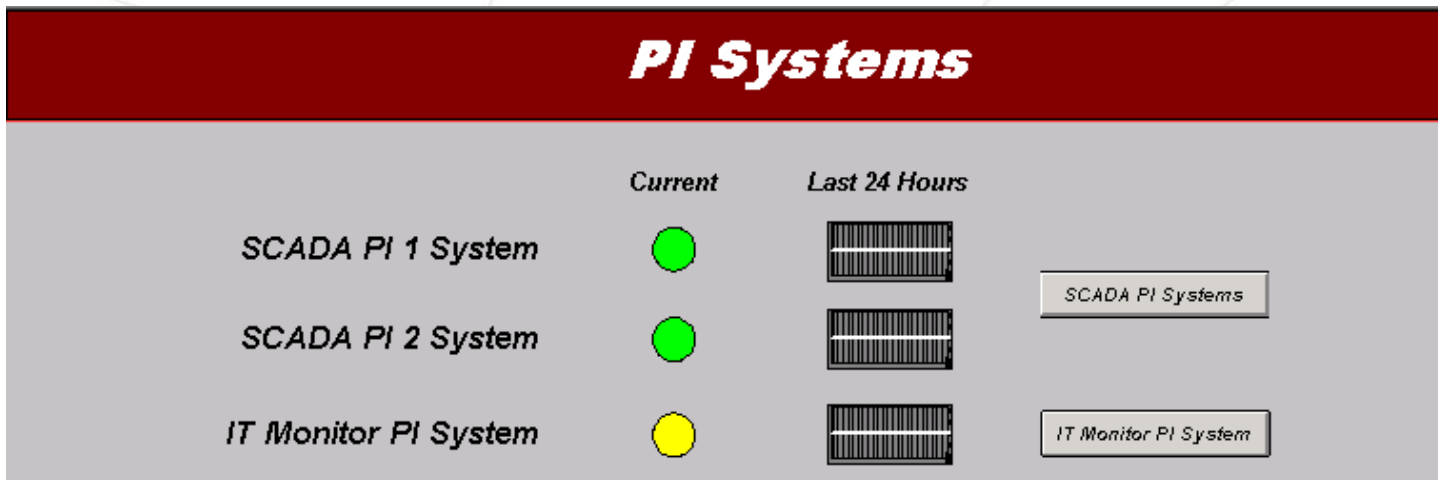

VALUE NOW, VALUE OVER TIME

# Health Monitoring Overview Screens

VALUE NOW, VALUE OVER TIME

# What About Compliance?

- NU's approach was two fold
  - Meet current requirements to provide strong EMS Availability Reporting to meet ISO-NE requirements
  - Develop a solid baseline Critical Cyber Asset Monitoring System to be used within our control centers and with the ability to expand to field critical cyber assets.

VALUE NOW, VALUE OVER TIME

# Lessons Learned

- As always, standards and conventions are critical
- Use empirical evidence to enlist support
- NERC 1300 is like ISO 9000 or FDA Validation
  - Define a corporate standard, follow that standard, and make sure that you can prove that you followed it
- Compliance is a constantly moving target, so your system must be able to easily adapt with little effort

VALUE NOW, VALUE OVER TIME

# The Path Forward

- More SNMP, SysLog, and NetFlow data
- CONVEX Control Center
- Enhancements to AF Model and Analysis

VALUE NOW, VALUE OVER TIME

# Thank You!

## Questions?

- Special thanks to:
  - Dennis Mullen, PSNH
  - Ken Walker, PSNH
  - Mark Wunderli, PSNH
  - Faisel Ahmed, PSNH
  - Phil Ryder, Accelerated Information Technologies
