

Site Specification Management Using the RtPM Platform

Tamara Carbaugh

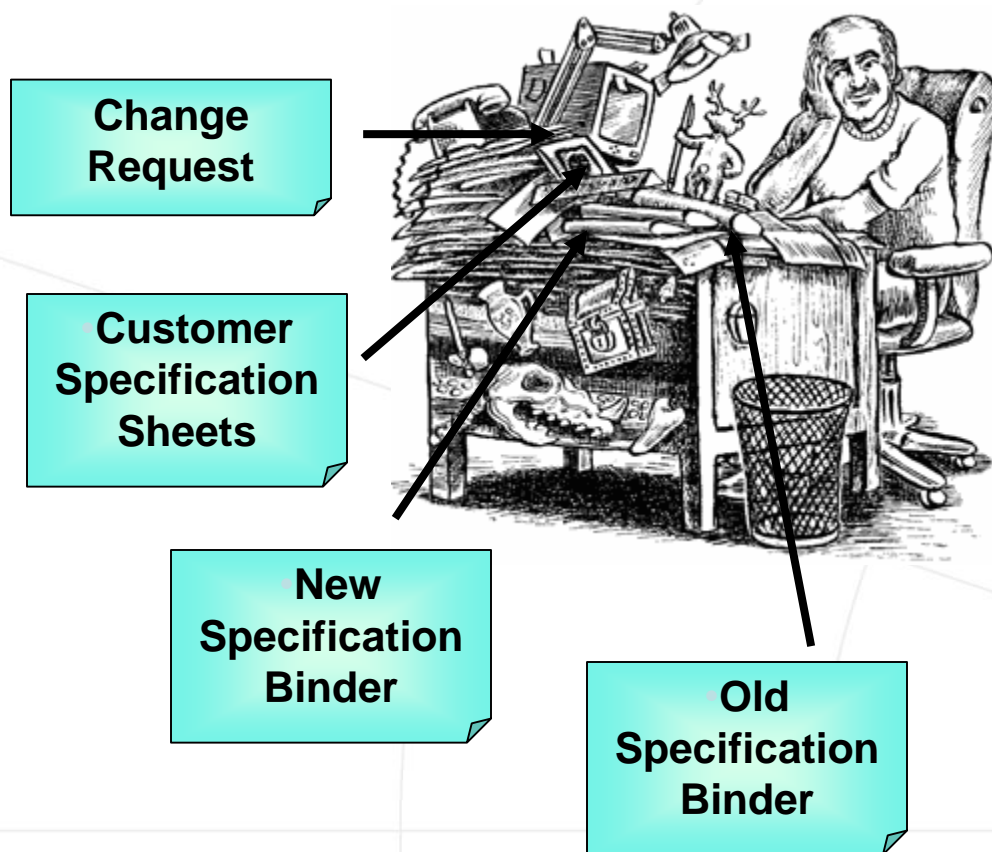

Outline

- Industry Challenges
- Features
- Benefits
- Demonstration
- Summary

VALUE NOW, VALUE OVER TIME

The Need for Specification Management

- What has been approved?
- Do I have the most recent copy of the specs?
- Can I see the data differently?

VALUE NOW, VALUE OVER TIME

The Value of Specification Management

**Pulp and
Paper
Company**

Premium Photocopying Paper

Grade ID: FP20888 Grade Creation Date: Friday, March 25, 2005
Version: 0 Grade Modification Date: Thursday, March 31, 2005
Status: Developmental

Quality Test Specifications

Property	MIN	Target	MAX	Test Method
Brightness	35	38	41	TAPPI-452
Density	0.8	0.9	0.9	TAPPI-411
Moisture	1	1.5	2	ANSI 1301.457s-1992
Basis Weight	30	32	34	TAPPI-410
Dirt	0	1	3	TAPPI-437
Opacity	20	25	30	TAPPI-425
Caliper	3.2	3.4	3.6	TAPPI - 411
Ash	5	8	11	TAPPI-413
Tensile Strength	40	45	50	TAPPI-273
Conditioned Weight	50	60	70

VALUE NOW, VALUE OVER TIME

The Need for Contextual Data

- Is the product being made according to customer specifications?
- Is that increase good, bad or potentially dangerous?

VALUE NOW, VALUE OVER TIME

The Value of Contextual Data

- Customer specs are being met ☒
- Quality standards are being met ☒
- Waste and rework are being minimized ☒

VALUE NOW, VALUE OVER TIME

ProcessPoint

- Comprehensive product specification database
- System of record for specification information
 - Product properties
 - Quality limits
 - Product parts
 - Manufacturing procedures
 - Product history
 - Approval and electronic signoffs
- Provides contextual specification data to
 - Users
 - RtPM Clients
 - Other systems

VALUE NOW, VALUE OVER TIME

ProcessPoint Fit with RtPM

- The PI System stores the complete history of what has happened in the process
- ProcessPoint stores the specifications that define how the process should run
- Like the PI System does for real-time data, ProcessPoint stores the history of spec data forever and allows it to be used in meaningful ways

Integration with Manufacturing Data

- One set of specifications
 - Quality, manufacturing, engineering, sales, other departments all looking at same data
- Real-time feedback to manufacturing
 - Increase product quality
- Automate creation of reports
 - Expedite product shipments

Scalability

- ProcessPoint is designed for scalability
 - Security model, search capabilities
- Successful installations include:
 - Single manufacturing line at a site (10 users)
 - Enterprise-wide system with more than 50,000 raw material and product specifications with over 300 users spread across 10 countries

Sample Customer Application

- Application:
 - Pulp and Paper customer using PI, ACE, ProcessPoint and the PP COM Connector
 - Real-time adjustments to recipe blends and other production specifications
- Value:
 - Ability to adjust feedstock to achieve an optimized least cost formulation
 - Immediate visibility to the cost impact of recipe changes

VALUE NOW, VALUE OVER TIME

Sample Customer Application

- Application:
 - customer using PI, BatchView, Data Entry Grid, AlarmView, SQC, ProcessPoint, PP COM Connector, ProcessBook
 - Quality and manufacturing specifications from ProcessPoint are integrated with real-time manufacturing data
- Value:
 - Visibility of adherence to manufacturing targets, in an environment with frequent grade changes
 - Improved quality and grade consistency
 - Ability to analyze and improve the process through product based alarming and SQC analysis

VALUE NOW, VALUE OVER TIME

Benefits

- Improved change management
- Quicker time to manufacturing
- Reduced waste
- Reduced product variability
- Higher quality and increased customer satisfaction
- Ability to analyze and improve manufacturing

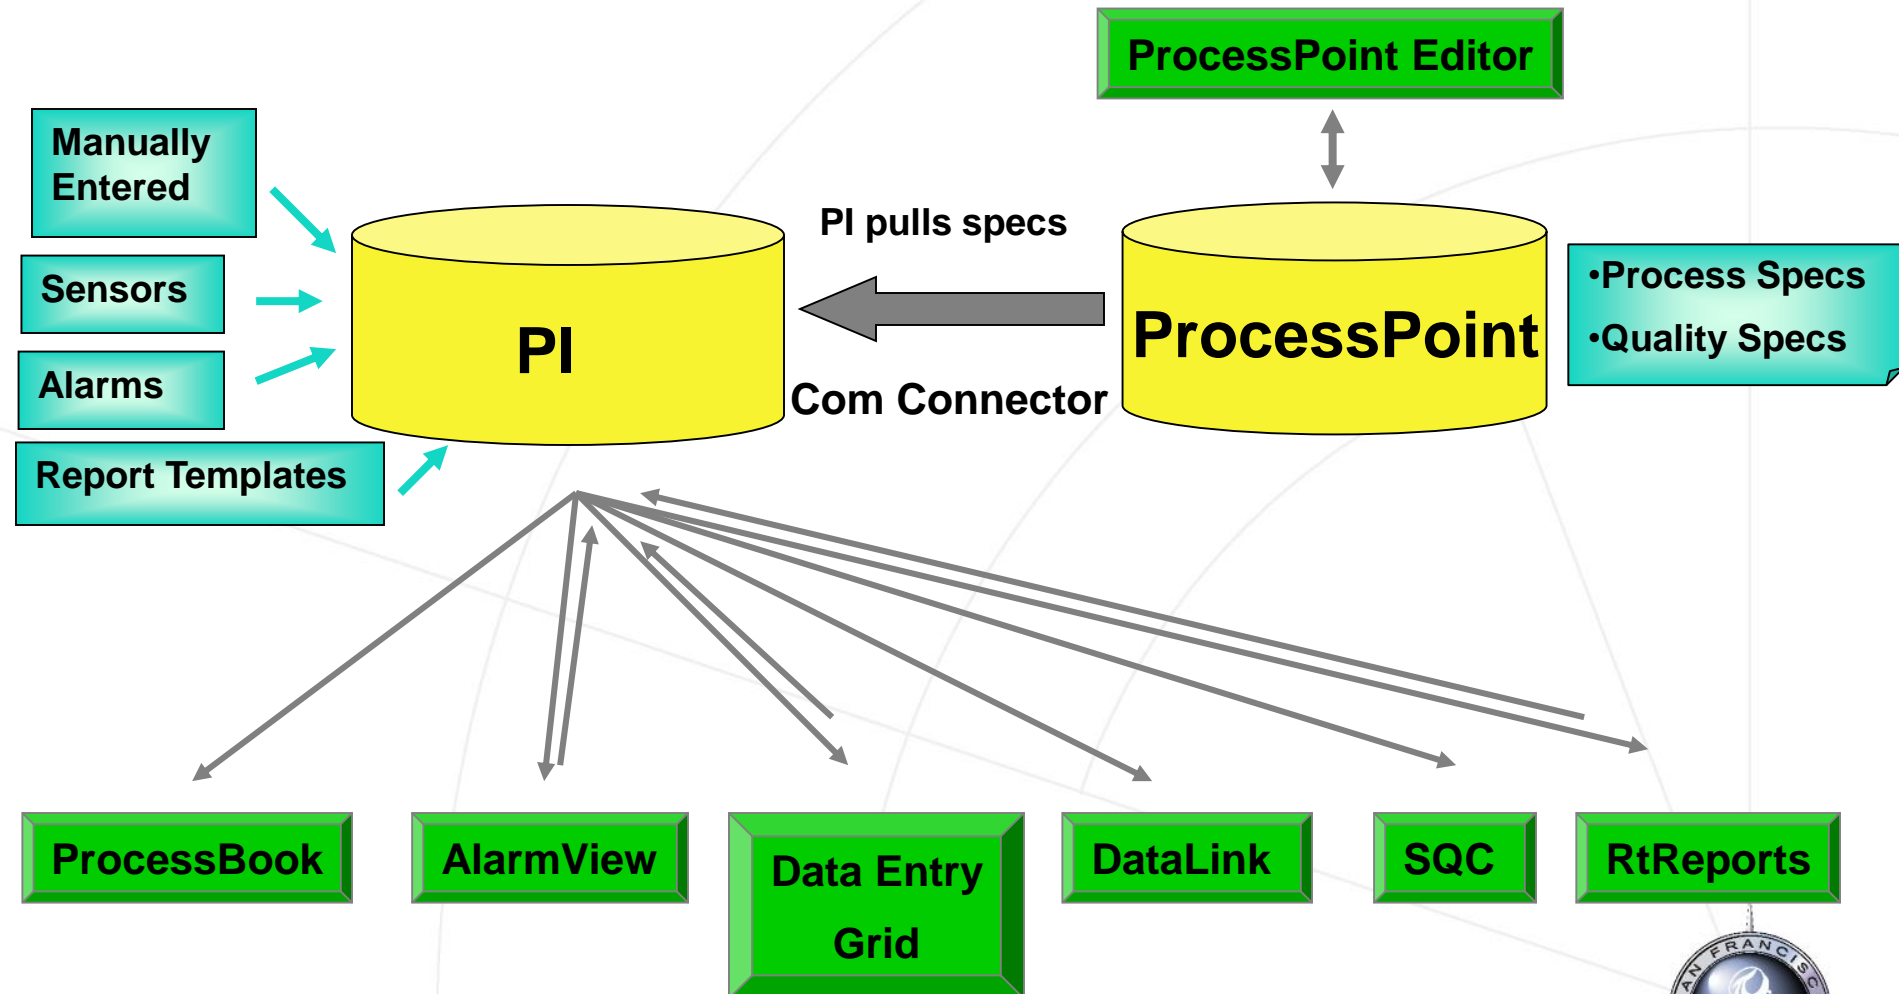

VALUE NOW, VALUE OVER TIME

Demonstration Scenario

- Pulp and paper example
- Quality specifications
 - i.e. Opacity, Ash, Basis Weight
- Process specifications
 - i.e. Machine Speed, Steam Flow, Material Feed Rates
- Specification data used to provide context to real-time manufacturing data

Demo Components

VALUE NOW, VALUE OVER TIME

Product Specifications: ProcessPoint

Demo Description

- 10 Quality parameters with:
 - Minimum, Target, Maximum
- 10 Process parameters with:
 - URL, UAL, TGT, LAL, LRL
- Version management
- Electronic audit trail

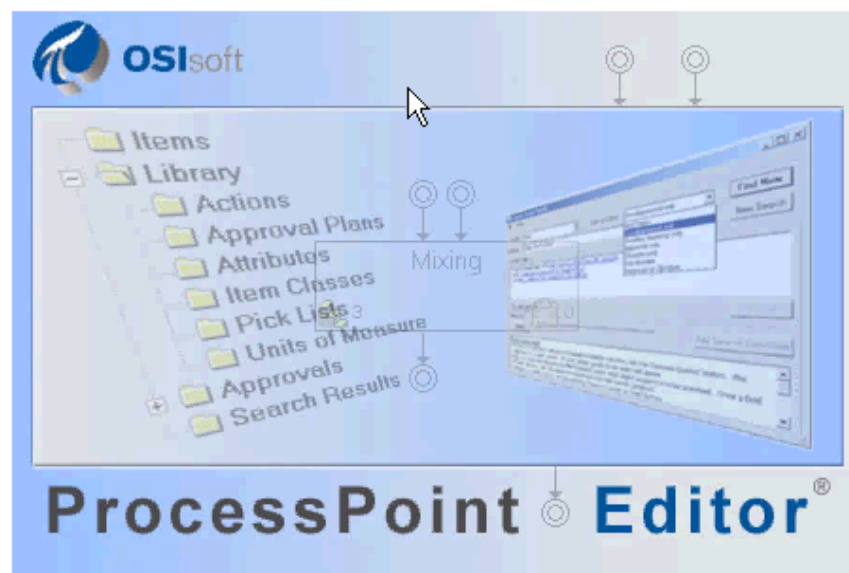

Value

- Capture the data important to your process
- ProcessPoint stores the complete product
- Powerful change management capabilities
- Spec data distributed to users, RtPM clients & other systems

VALUE NOW, VALUE OVER TIME

- Items
- Library
- Approvals
- Search Results

Process Monitoring: ProcessBook

Demo Description

- Real-time process data from PI
- Specification context data pulled from ProcessPoint with COM Connector
- Snapshot and historical data shown
- Limits update automatically when product code changes on equipment

Value

- Instant feedback to operator when manufacturing is outside of limits

Respond to Process: AlarmView

Demo Description

- Product based SQC Alarms
- Alarm limits come from ProcessPoint
- Operators can enter reason codes or comments when violations occur

Value

- Product based alarming
- History of alarm events with reason codes allow for post-production analysis and improvement

Alarm Hierarchy

Current Alarms - \\localhost\OSIMill

Alarm	Condition	Prio...		Start Time	Sequence Start	Source Value

Enter Manual Values: Data Entry Grid

Demo Description

- Quality tests are performed on the product and results are manually entered
- Specification data from ProcessPoint
- Manually entered data inserted into PI

Value

- Manual data is stored in PI Archive
- Users get immediate feedback when manual data is out of spec

OSIsoft Pulp and Paper Company

Analysis and Improvement: DataLink

Demo Description

- Side by side comparison of key quality and process values
- Quality and process specification limits from ProcessPoint
- Manufacturing data from PI

Value

- Detect out of spec patterns
- Link process conditions to finished product quality

Process Improvement: Real-time SQC

Demo Description

- Real-time SQC charts configured with:
 - URL spec tag set as upper spec limit
 - UAL spec tag set as upper control limit
 - TGT spec tag set as center line
 - LAL spec tag set as lower control limit
 - LRL spec tag set as lower specification limit

Value

- Statistical calculations performed automatically
- Determine:
 - Do limits reflect operating capabilities?
 - Can specification limits be tightened?

Certificate of Analysis: RtReports

Demo Description

- Report templates stored in PI
- PI provides real-time quality data
- ProcessPoint provides specification data

Value

- Automate generation of Certificate of Analysis
- Expedite shipment of finished product

Demo Summary

- ProcessPoint adds specification context to RtPM clients
 - ProcessBook
 - PI SQC
 - AlarmView
 - Data Entry Grid
 - PI DataLink
 - RtReports

VALUE NOW, VALUE OVER TIME

Summary

Drive Operational Efficiency

- Standardized data model and structured environment for controlled change management
- All users access the same set of product specifications for process and quality parameters

Accelerate Decision Making

- Provide visibility of specification data to real-time displays and data analysis tools
- Enable automated compliance reports

Enable Performance-Driven Manufacturing

- Less time managing specs and more time improving the process
- Improve product quality and consistency
- Reduce waste and rework
