

Utilizing OSIsoft PI in Electric Distribution at Duke Energy

Shawn Ervin
Dist. Planning Lead
Duke Energy-Carolinas

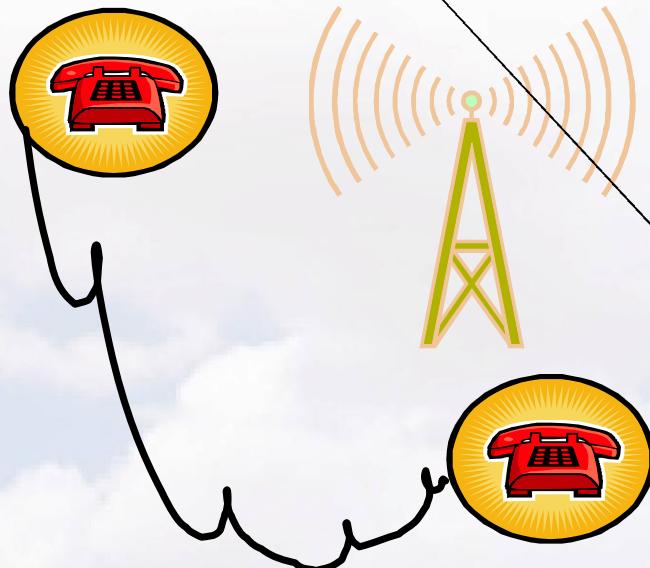

Business Challenges

- Bring data back from field devices and provide it to those who need it in a usable manner
- Interface with other data and hardware systems
- Develop user interfaces
- Develop users

Components

***Field IEDs @
Line Capacitors
Substations
Reclosers***

***Meter System
SCADA
OMS***

Solutions

- Digital Cell Technology
- OSIsoft PI
- ProcessBooks
- Existing Field Devices
 - ▶ Substation Relays
 - ▶ Line Capacitors
- Existing Metering System

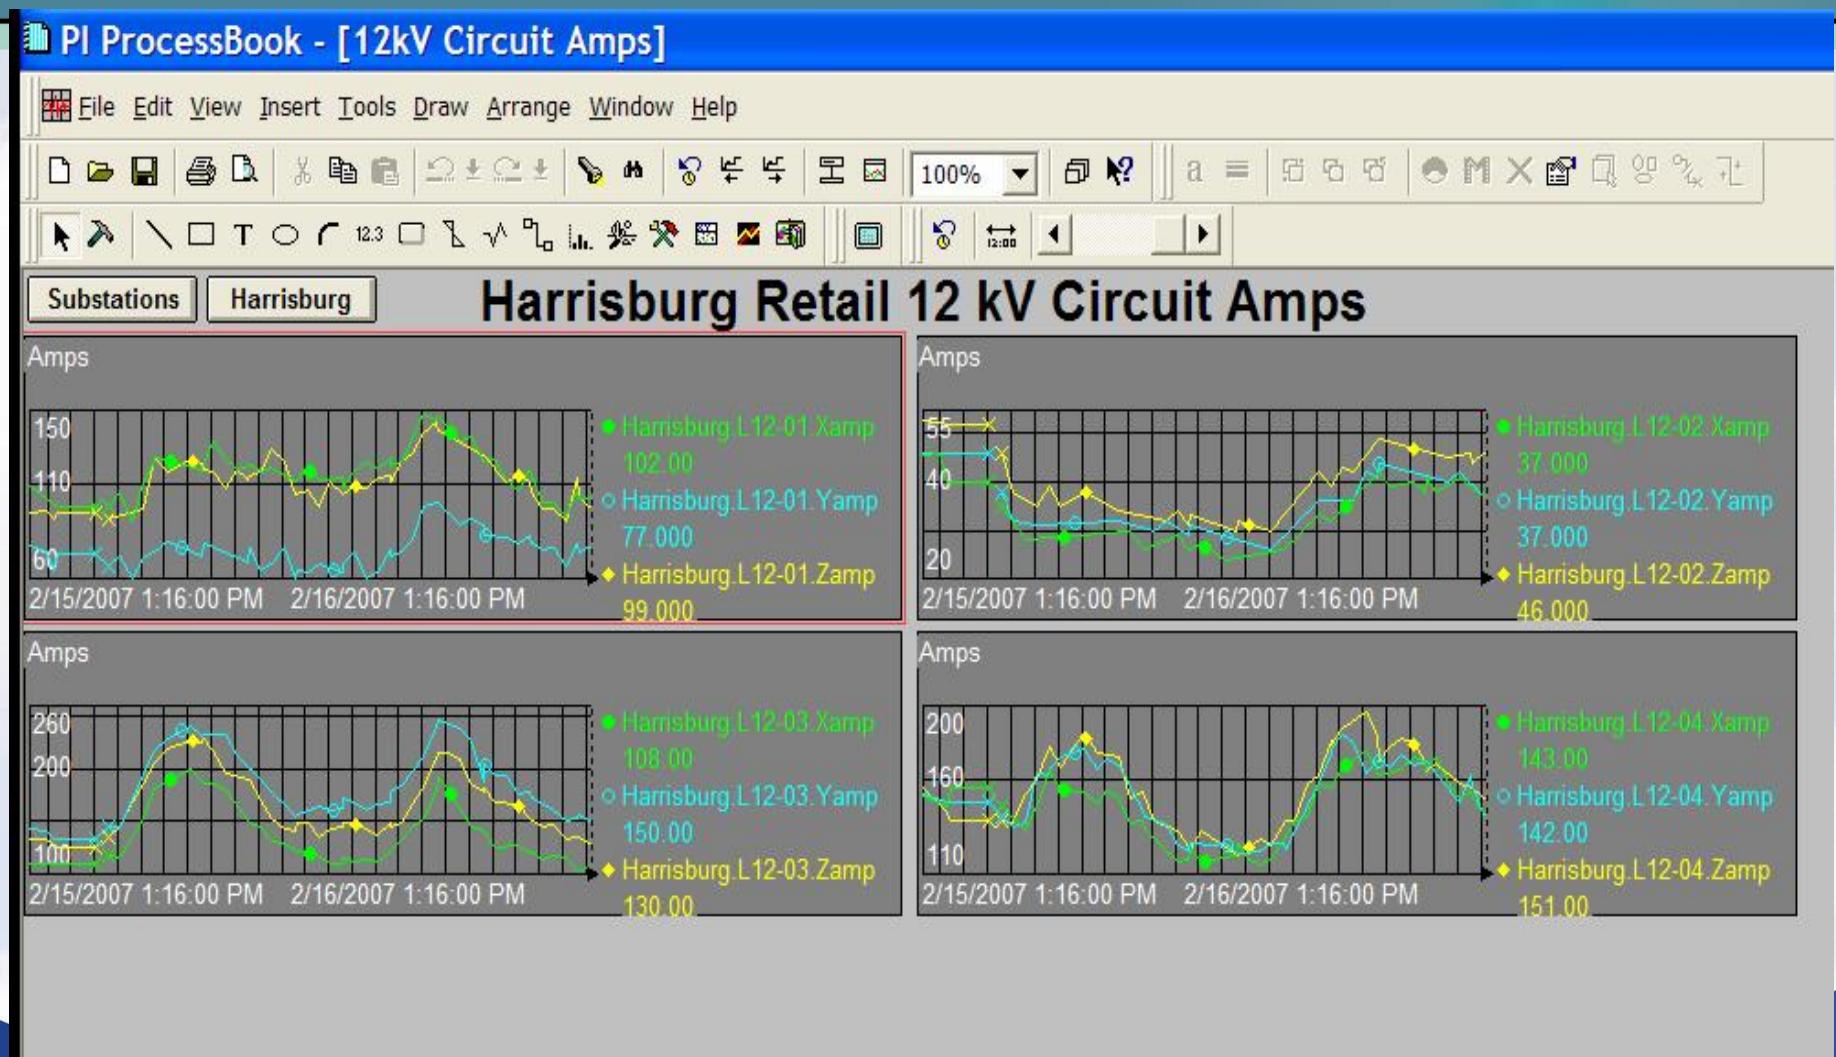

Overall Benefits

- Provides Distribution Data
- Improves Inspection Process
- Improves System Efficiency
- Improves Customer Service
- Enhances Asset Management

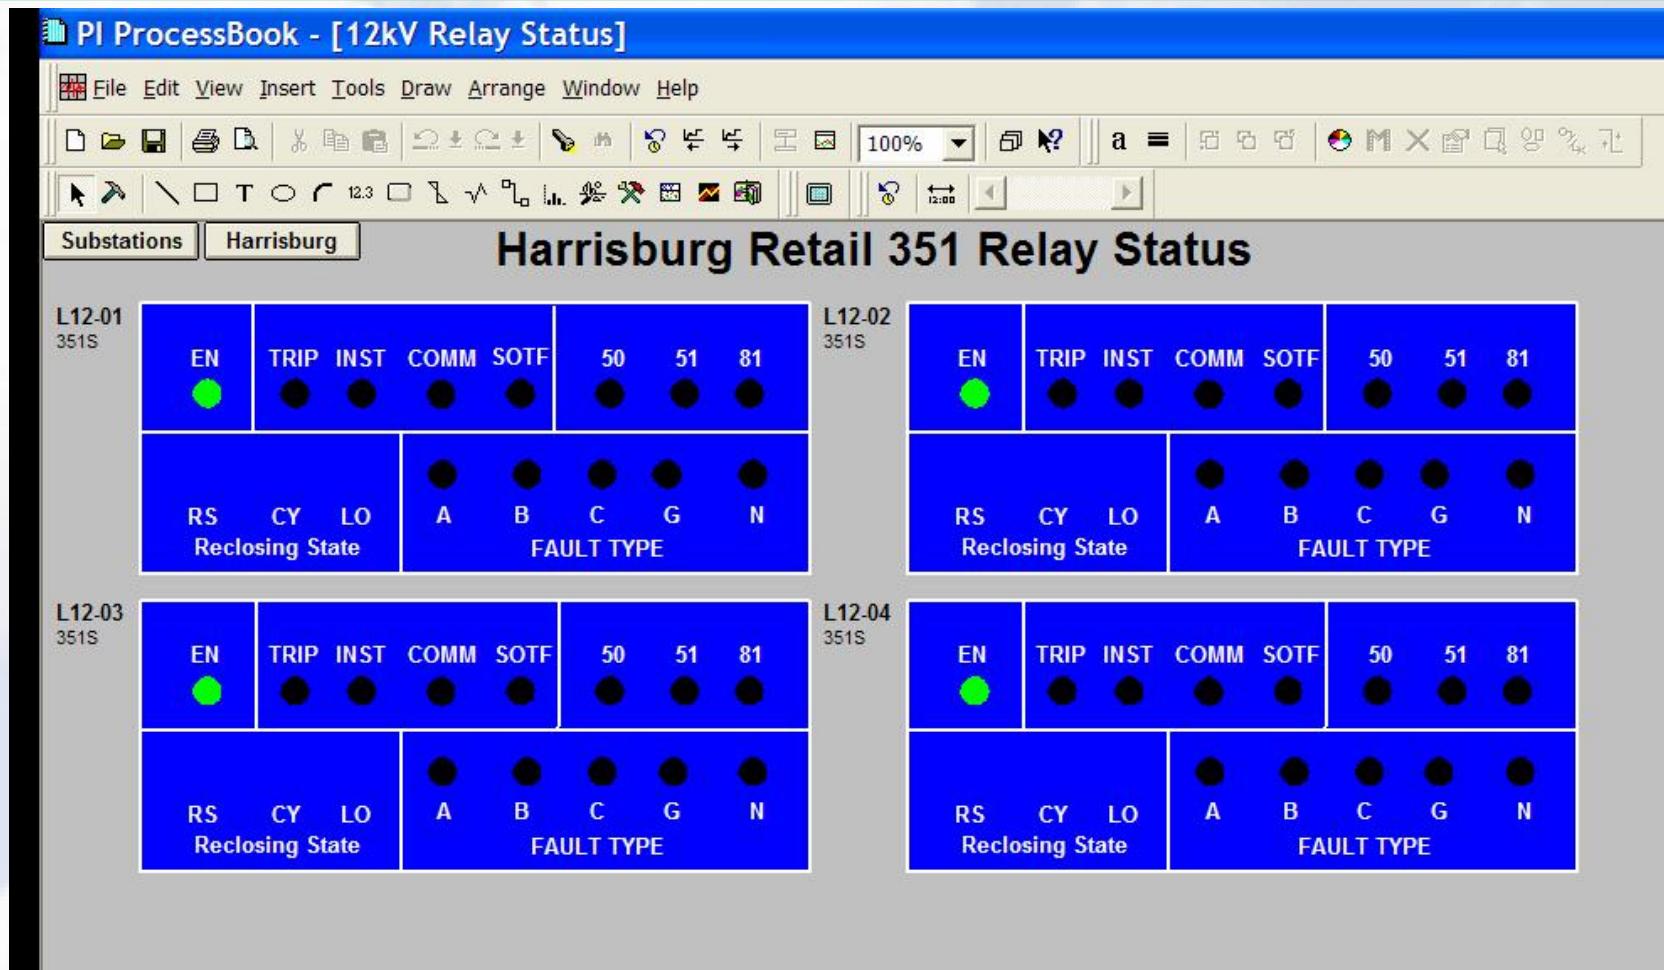

Distribution Substations

- Distribution Circuit Information
 - ▶ Analogs-Current, Voltage
 - ▶ Breaker Status
 - ▶ Currently deployed ~1400 of 2300
- Transformer bank information
 - ▶ >900 Bank Meters' data from interface with metering system
- ProcessBook displays created
- New users trained

Circuit Load

Circuit Relay Status

Substation Benefits

- Full Voltage, Load and VAR Profiles
 - ▶ Improves planning with full view of load, improves project justifications-Previously only used a snapshot of peak values
 - ▶ Identifies equipment issues prior to customer complaints
 - Voltage, Other issues related to unbalanced loading
 - ▶ Improves effectiveness of existing capacitors-both station and line
- Breaker Status knowledge
 - ▶ Visual Presentation to Distribution Dispatchers
 - ▶ Improves outage trouble shooting, outage history easier to analyze
 - ▶ Outage prevention-Identify breakers inadvertently left in blocked position
- Future changes to inspection practices

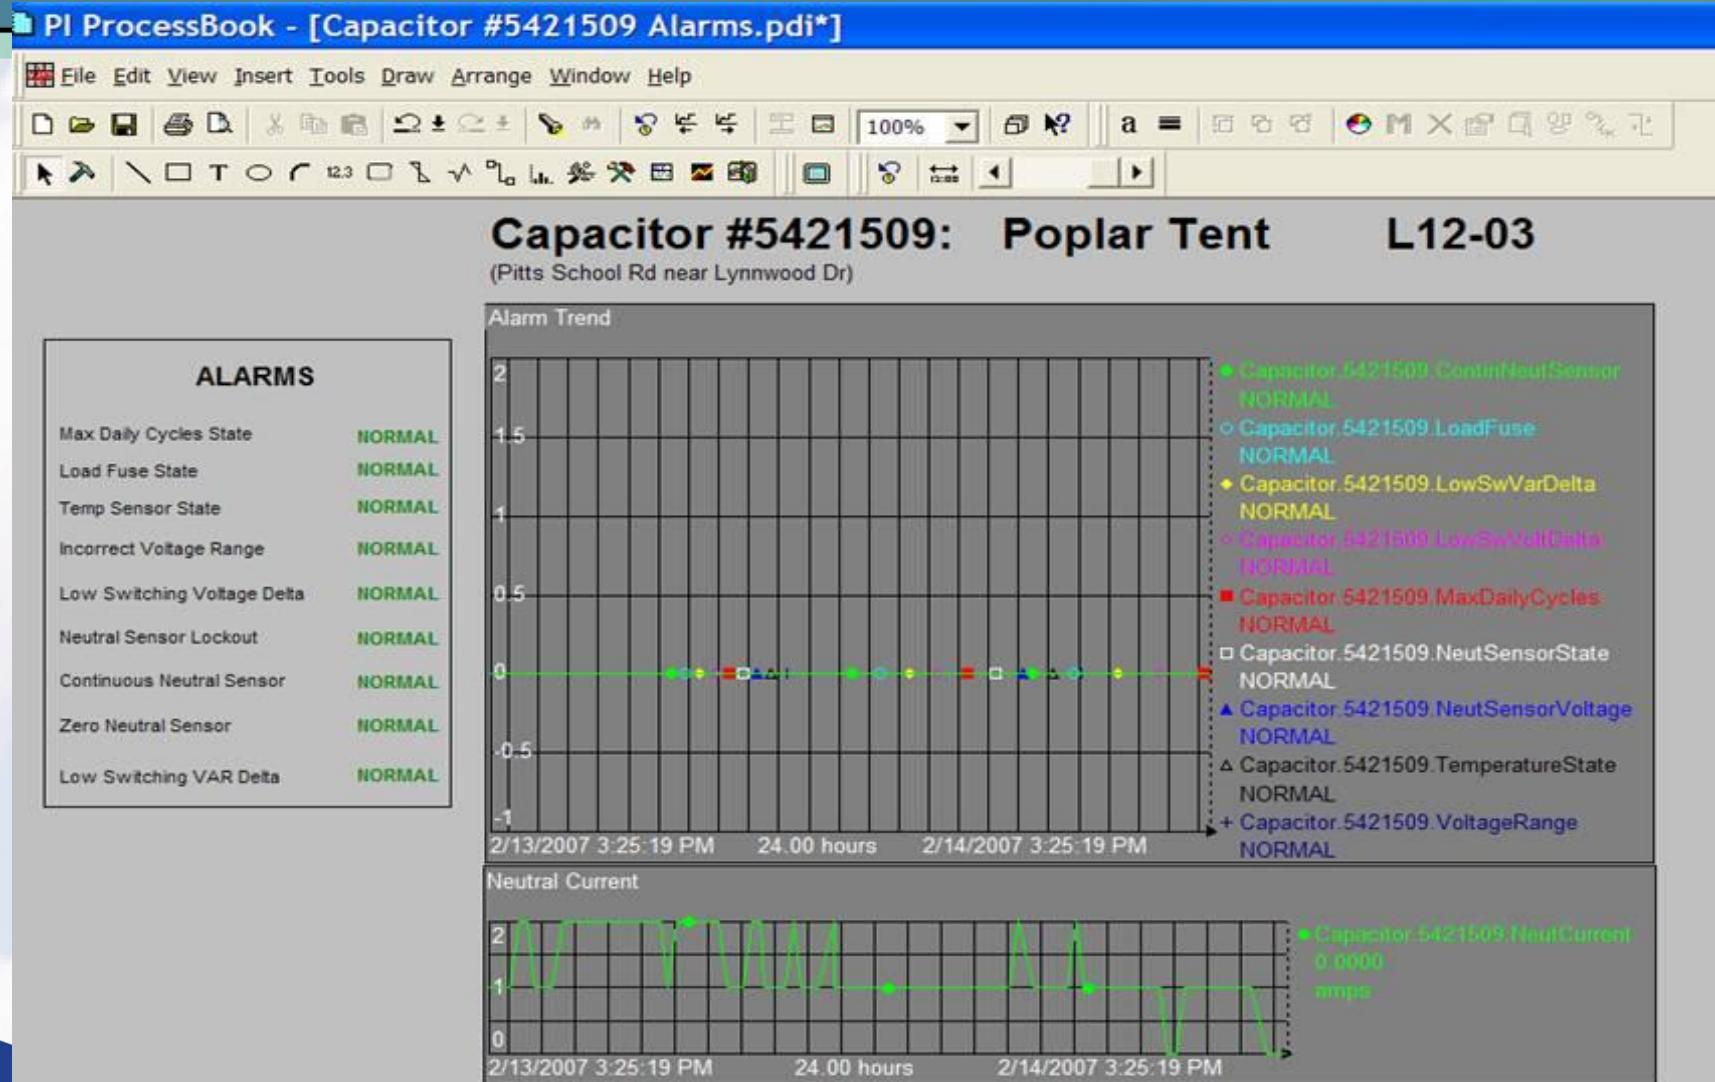

Line Capacitors

- Added digital modem to existing capacitor controllers
- Mapped available analogs and status points to PI
- Currently about 850 deployed with 1400 remaining

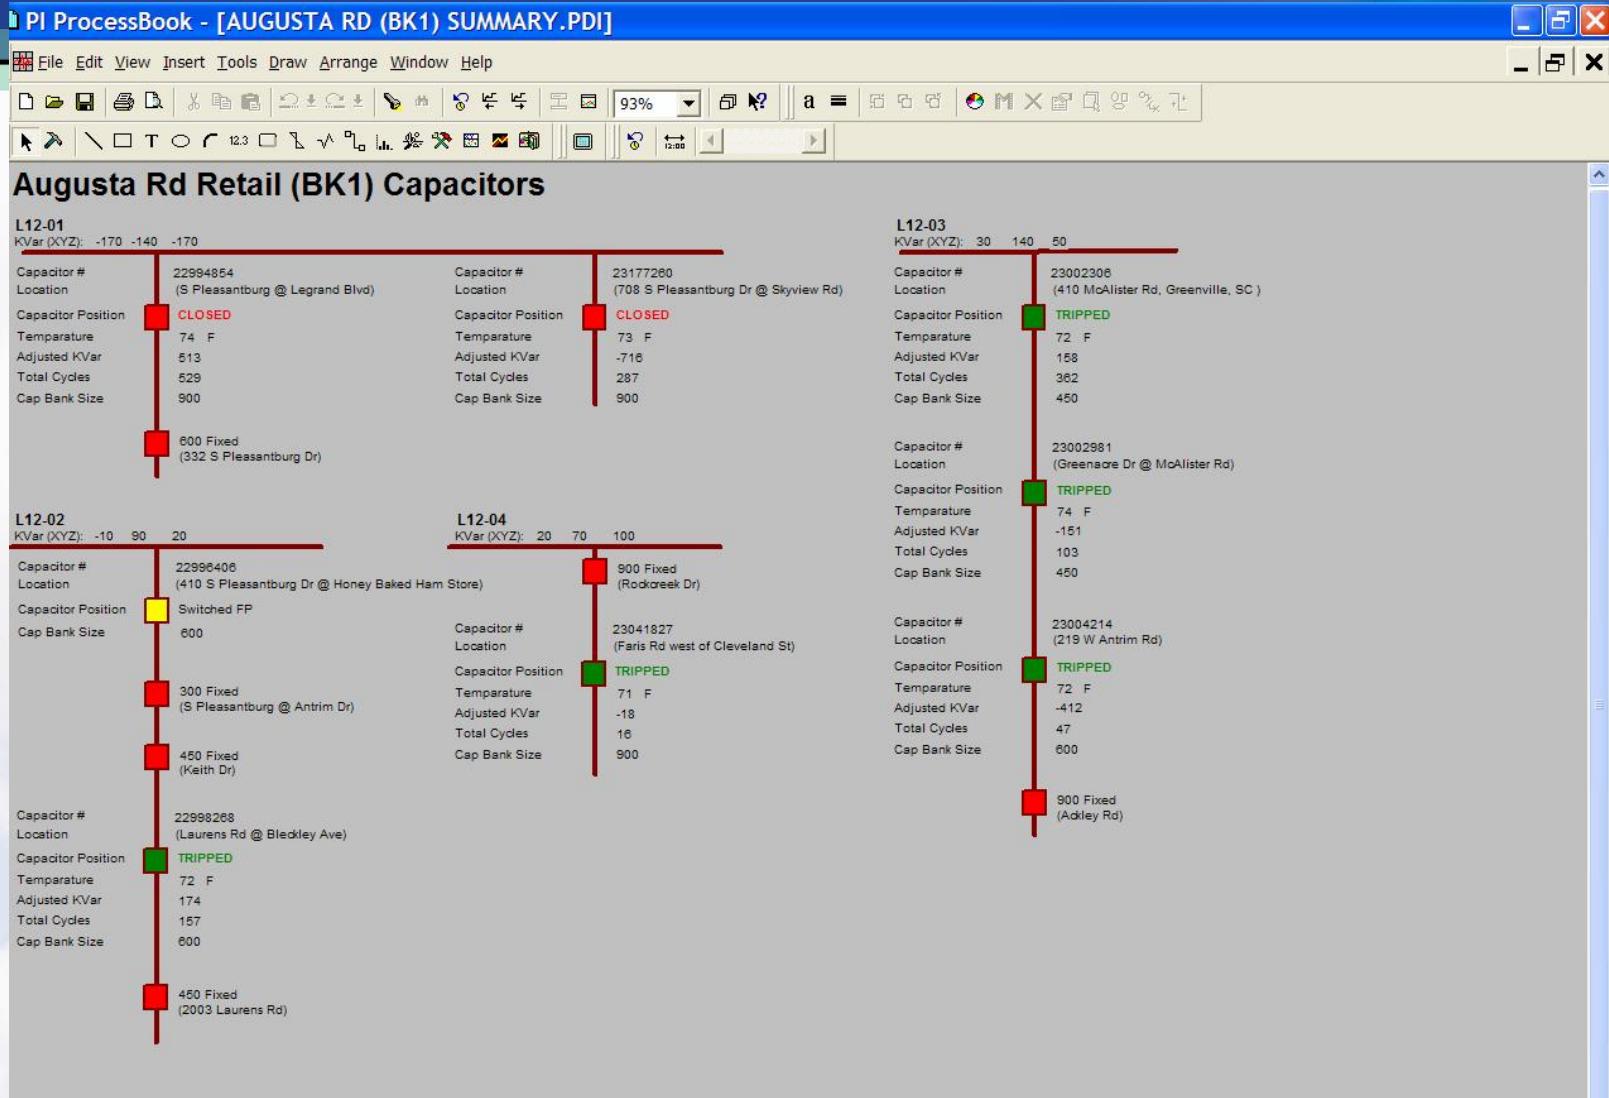

Line Capacitor Displays

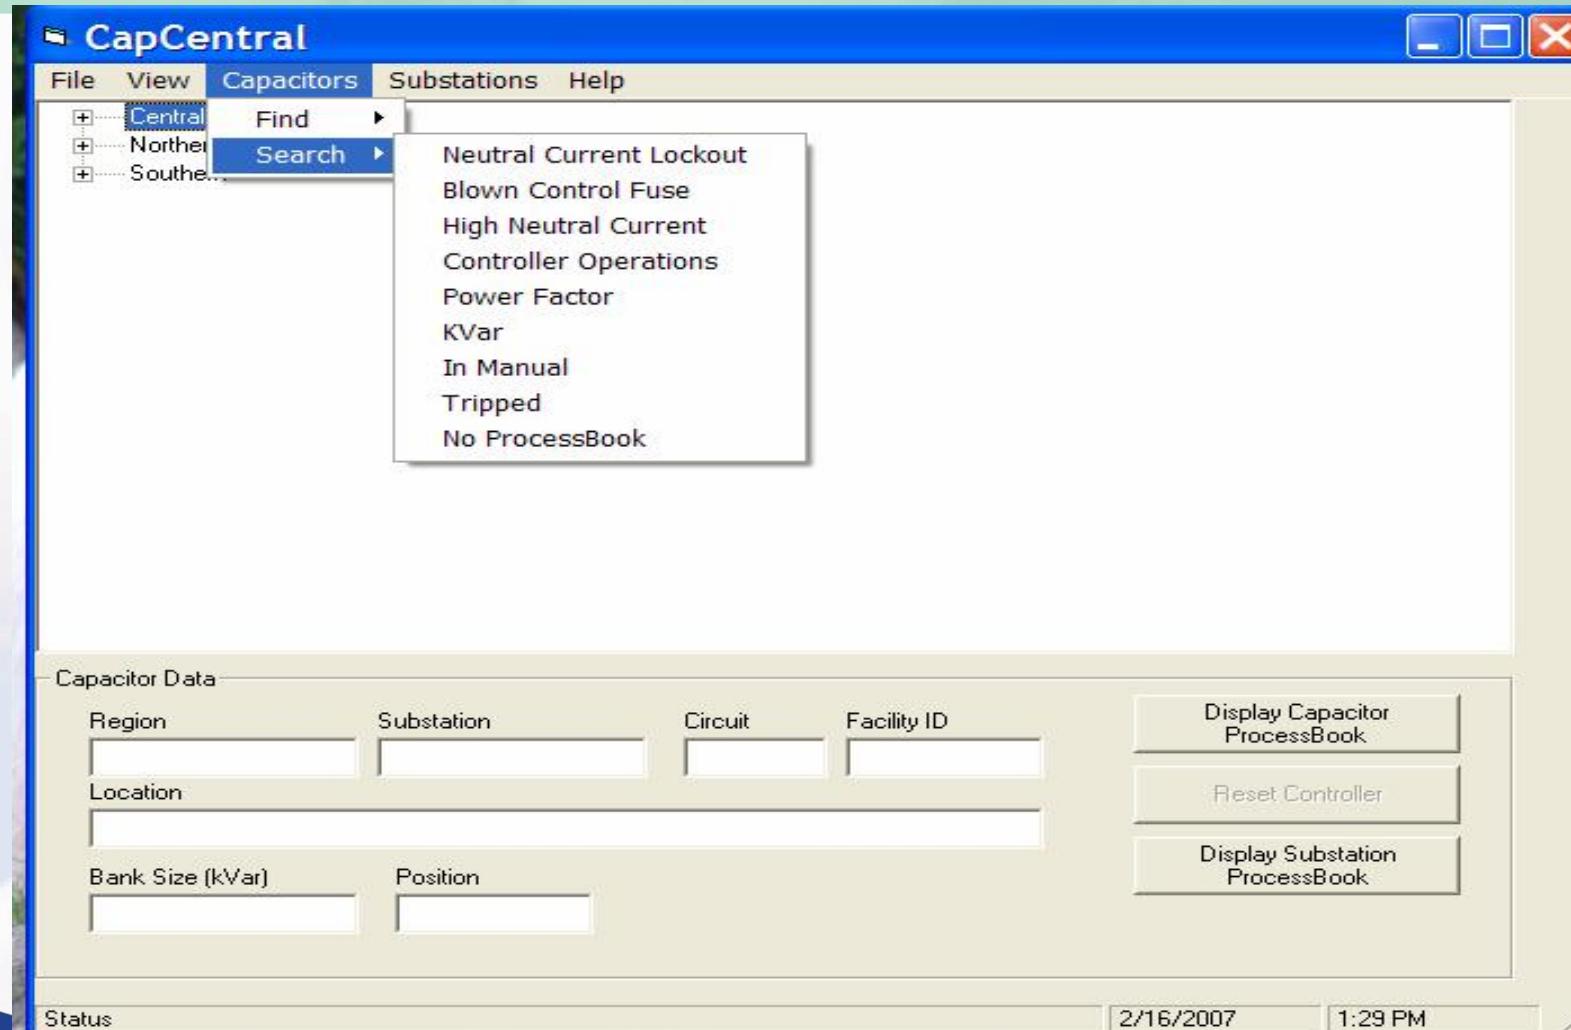

Line Capacitor Displays

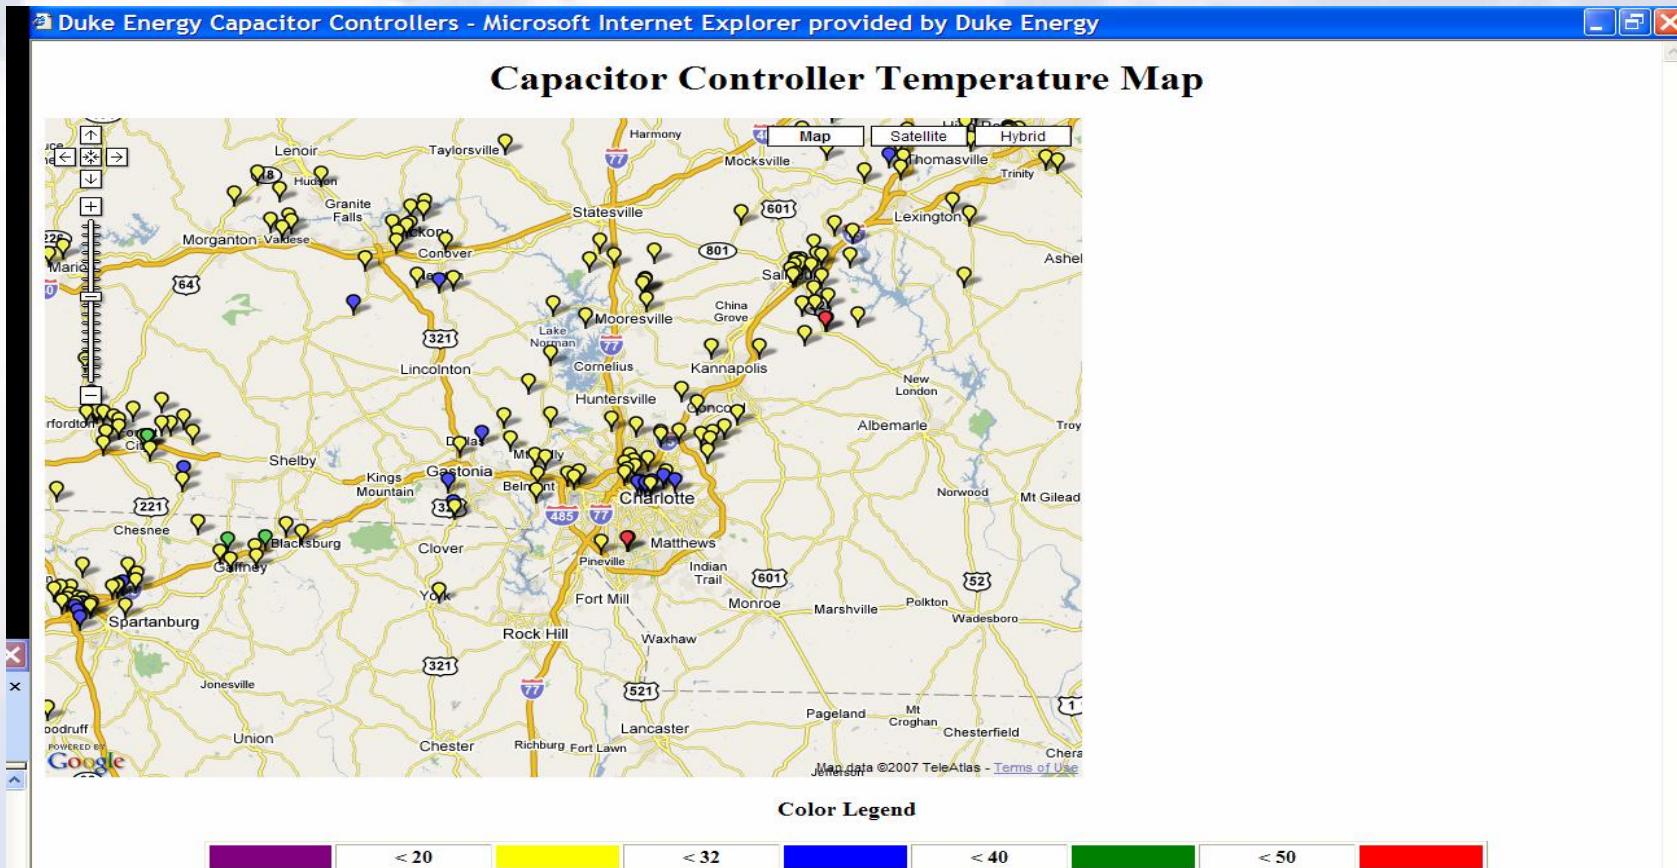

Line Capacitor Displays

Line Capacitors Application

Field Temp. from Line Capacitors

Line Capacitor Benefits

- Eliminates Manual Inspections
 - ▶ System identifies where work is needed
- Improves VAR profiles
 - ▶ Improves overall effectiveness of the capacitor asset
 - ▶ Gains efficiency for system capacity
 - ▶ Enables capital dollar deferment and improves prioritization of available capital.
 - ▶ Allows for installation of less expensive line caps (instead of station caps)
 - ▶ Improves voltage profiles-leads to better customer service

Future Plans

- Substations

- ▶ All circuits will be added to the PI System over next 2-3 years as part of SCADA project
- ▶ New substation metering interface will streamline future transformer bank data retrieval
- ▶ Other apparatus with intelligent devices will be added

- Line Capacitors

- ▶ New installations include PI
- ▶ Retrofits will also continue

- Additional interfaces

- ▶ Outage management system

Future Plans

- Other devices for consideration
 - ▶ Electronic Reclosers
 - ▶ Line Sensors
 - ▶ Voltage Regulators
 - ▶ Transformer Monitors
 - ▶ Line Switches

Is Your Interface Dictating Your System Architecture? *What's in your design?*

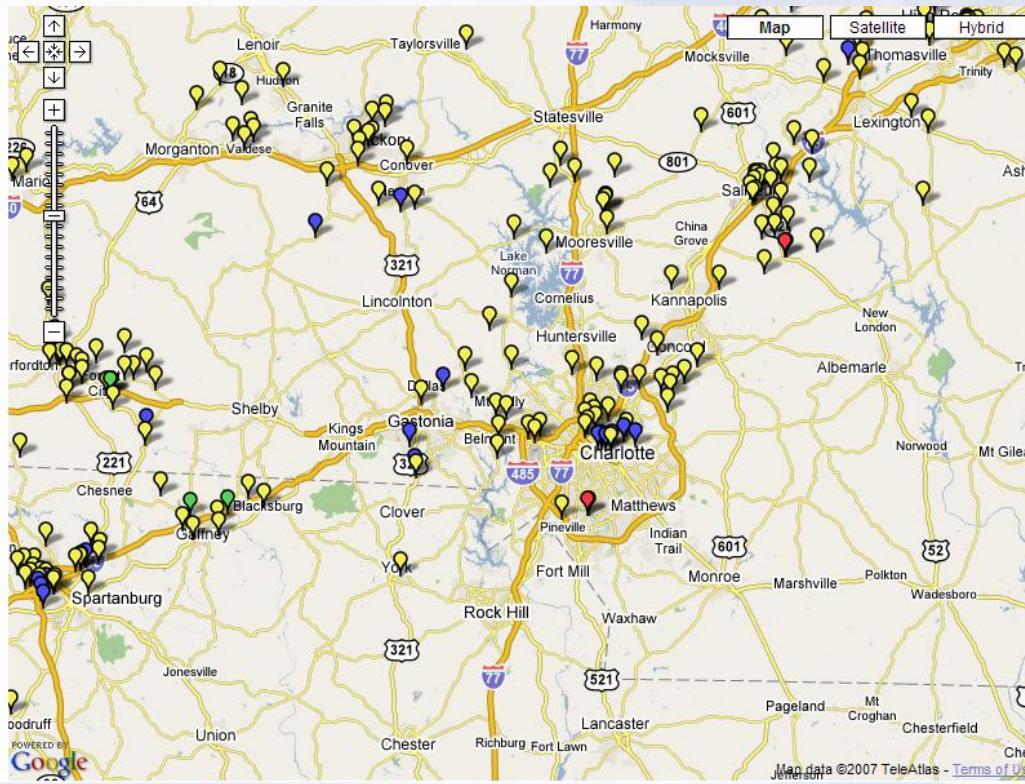

Daniel Riddell
Interface Developer
OSIsoft, Inc.

Agenda

- Architectural Challenge
- Shortcomings
- Let's Talk
- The New PI Solution
- Realization of Benefits
- What's Next

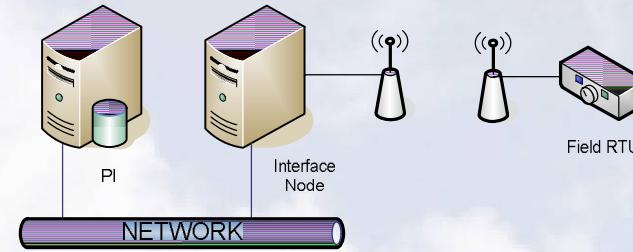

Architectural Challenge

Geographically Isolated RTUs

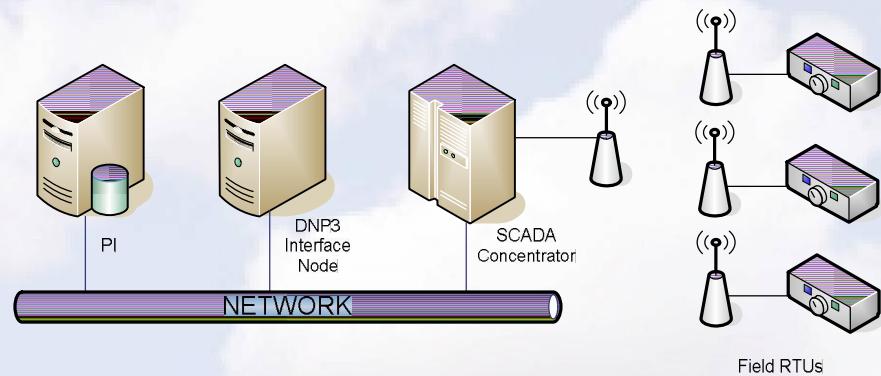

Architectural Challenge

- Wireless Connectivity

- Scalability

- Common Protocol – DNP3
- SCADA DCS

Architectural Shortcomings

The Interface is Dictating the Architecture!

- ▶ Current DNP3 Interface Limits
- ▶ Require 100+ instances (Windows Services)
- ▶ ~8 Hour start time
- ▶ Increased expenditures

Result is a Maintenance Nightmare!

How can OSIsoft help?

Help us help you.

Help us help you.

Don't settle for WYSIWYG!

The Solution

- Needed DNP3 Interface Enhancements
 - ▶ Asynchronous IO
 - ▶ Reduce required instances
 - ▶ Consolidate DNP3 requests
 - ▶ Effective Interface and RTU Health Points
 - ▶ Disconnected startup
- PI Solutions
 - ▶ Upgrade to the latest version
 - ▶ Pointsource reorganization

The Benefits

- Reduction in required instances
 - ▶ 100+ to 10 instances
- Reduction in start time
 - ▶ ~8 hours to ~1 minute
- Detect cellular connectivity issues
- PI Administrator relief
- Cost savings!

What's Next

- DNP3 Interface Release
- Continuing Duke Energy and OSIsoft collaboration.

So, what's in your design?

VOYAGE2007

**Thank
You**
