

Regional Seminar Series Houston

Seeing Clearly in the New Reality

Ron Kolz
Vice President
OSIsoft, LLC

October 28, 2009

Empowering Business in Real Time.

- Twitter worth \$1 billion based on recent round of financing
 - No profit
 - Another dot com bubble?
- Many think
 - Blackberrys are electronic leashes
 - Facebook replaces real relationships
 - Twitter 140 char “tweets” annoying
 - Texting makes us illiterate
- Worries about new communication technology have always existed, but we must adapt

- 1840s: telegraph
 - Samuel Morse invents instant transcontinental communication
 - Henry David Thoreau “Maine & Texas have nothing important to communicate”
- 1870s: telephone
 - Samuel Morse declined to buy patent rights, “it provides no permanent record of conversation”
 - Western Union also declined, “would any sensible man transact his affairs by such a means of communication”
- 1930s: typewriter
 - NY Times said “usurped the art of writing with one’s own hand”

- So communication has evolved in past 150 years and impacted our personal and business worlds
- Let's see how the Finance world has changed

- CDO - Collateralized Debt Obligations
- \$1.5 trillion of securities linked to home loans
- GSAMP Trust 2006-S3
 - \$494 million mortgage product, backed by 8,274 second mortgages
 - Avg. equity was 0.71%
 - 58% of loans no documentation (occupy home, employment, etc)
 - Goldman created 13 slices to sell as securities
 - Individual loans toxic, but 68% of securities created rated AAA by Moody's and Standard & Poor's
 - Appeared safe as U.S. Treasury Bonds with better interest
 - 315 pg prospectus, most investors didn't read it

- 93% rated as investment grade (BBB- or higher)
 - Despite backed by 2nd mortgages of dubious quality on homes with less than 1% equity
 - Home prices fell, couldn't sell or refinance, 18% of loans defaulted
 - Most investor wiped out
- This was just one of 916 residential mortgage-backed issues totaling \$592 billion in 2006
- Wall Street
 - “when the ducks quack, feed them”

- Lehman Brothers collapse 13 months ago
- Biggest bankruptcy in US history
- Sale of Bear Stearns to JPMorgan Chase and Merrill Lynch to Bank of America
 - transformed Wall Street and started wave of problems in all industries
- All businesses struggled with new reality
 - Slash costs
 - Hunker down and weather storm
 - Need to innovate and consider new business models

- Lehman reminded us that crisis creates opportunity
- Baron Rothschild - The time to invest is when the streets are “red with blood”
- Thomas Edison started GE during the Panic of 1873
- Bill Gates started Microsoft in 1978 Recession
- And little company called Oil Systems was started in 1980...

- How is this relevant?
 - CDOs are complex & high risk and nobody knew what was behind them
 - No transparency
 - Like ERP big bang projects - long time to implement and high risk projects
- Need quick wins with 100% guaranteed success
 - Use data for competitive edge
 - Adapt and change
- That's PI: value now, value over time

- Many of our customers were impacted
 - Mandate to cut costs
 - Innovation needs information and collaboration
 - Plus existing pressures of regulatory compliance, competition, globalization, etc
- Need ability to improve situational awareness
 - Change direction when external influences change
- Respond faster and adapt as industry changes based on having flexible infrastructure
- OSIsoft building products to help
 - And leveraging Microsoft products like Sharepoint, OCS, etc

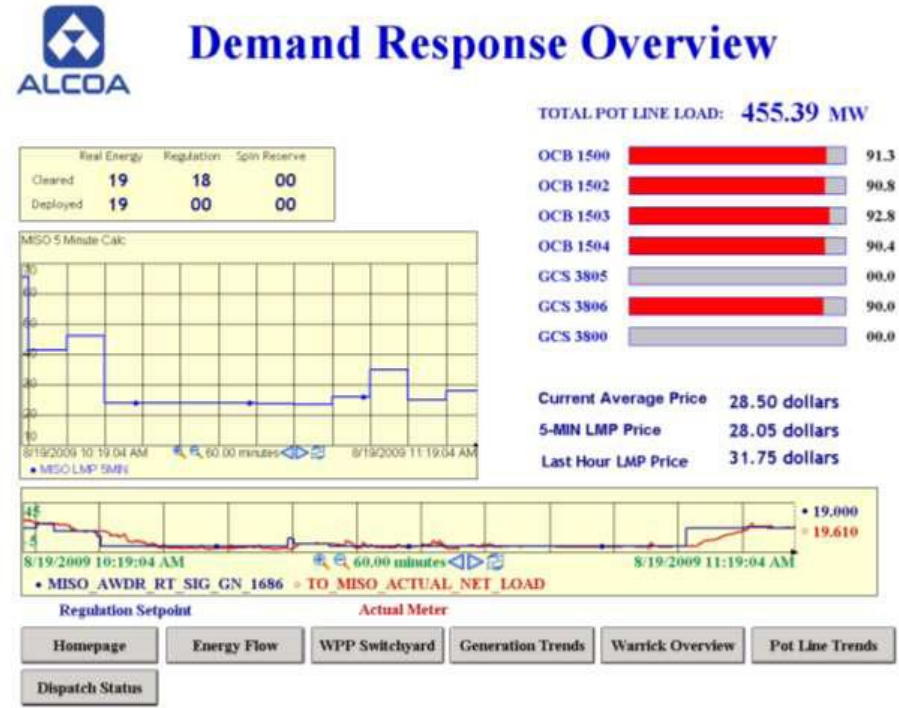

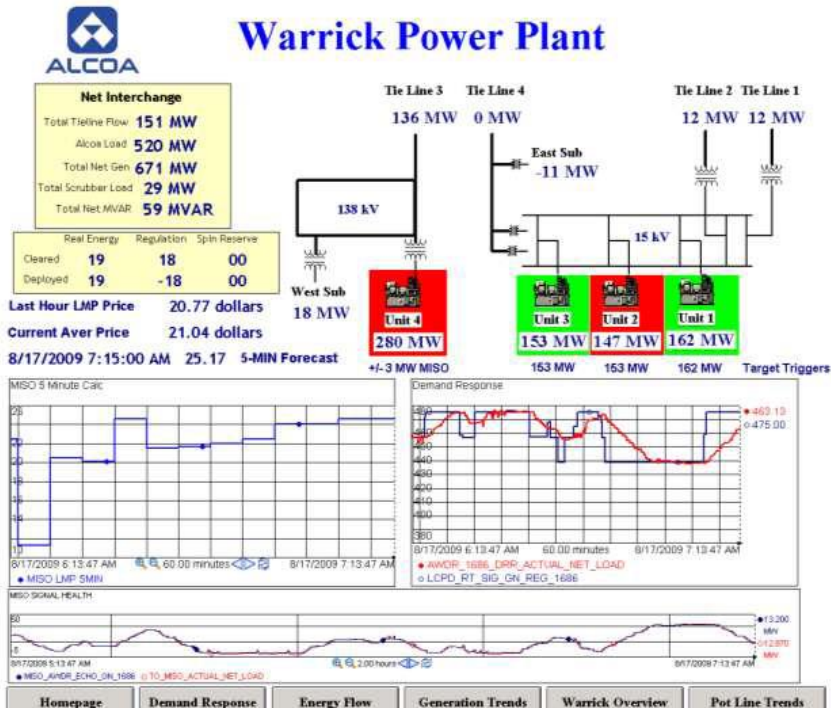

- One key benefit of common infrastructure is “unplanned” value
- International Paper
 - Greatest benefit was Environmental Monitoring
 - Wasn’t on radar screen when PI purchased
 - Came up immediately after deployment
 - Able to respond to operational challenge because common infrastructure to integrate with
 - Disguised many disparate systems under common real-time layer; programs had enterprise applicability
- That’s PI helping very large paper company, let’s see about smaller one

- 116-year-old paper company
- Actively market electricity produced by cogen plant
 - Can produce 37 MW, including 20 MW it can sell
 - Established itself as a CRES (competitive retail electric supplier) in Ohio
- Monitoring price swings
 - Looking for opportunities to produce more electricity
 - Can buy wholesale power and sell to other customers (not just utility)
- First tenant/customer for “micro grid”
 - Company will build their plant in building on site, Smart will sell power, steam & water
- PI enables this business model

Alcoa - Warrick, Indiana

- Fully integrated power plant (800MW), smelter (1960s) and rolling mill
- Warrick is Alcoa's largest US smelter, energy is 30-40% cost of aluminum mfg
- MISO controls top 30MW of load - saved \$1 million/yr

- Those are some PI examples of having data infrastructure to respond to market/industry changes
- Other more dramatic changes are coming that require us to manage information across wider scope

New Business Models : Shai Agassi company “Better Place”

- Distributed manufacturing of vehicle
- New infrastructure for operation, infrastructure owns battery
- Environment driving force in new business model

Something Old Something New: Minnesota Bridge

Bridge Performance - Sensors for bridge movements, expansion, contraction, corrosion, icing

Bridge Operation - sensors and cameras for traffic flow, speed, disruptions, accidents, stalls and other disruptions, security

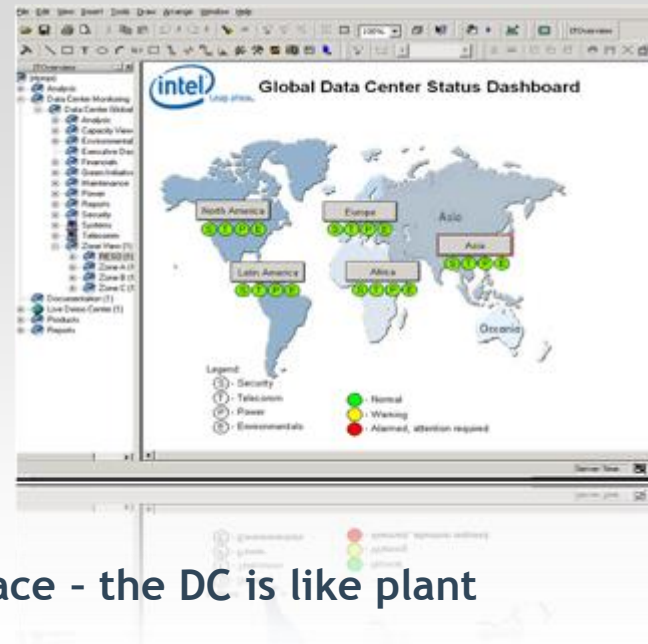

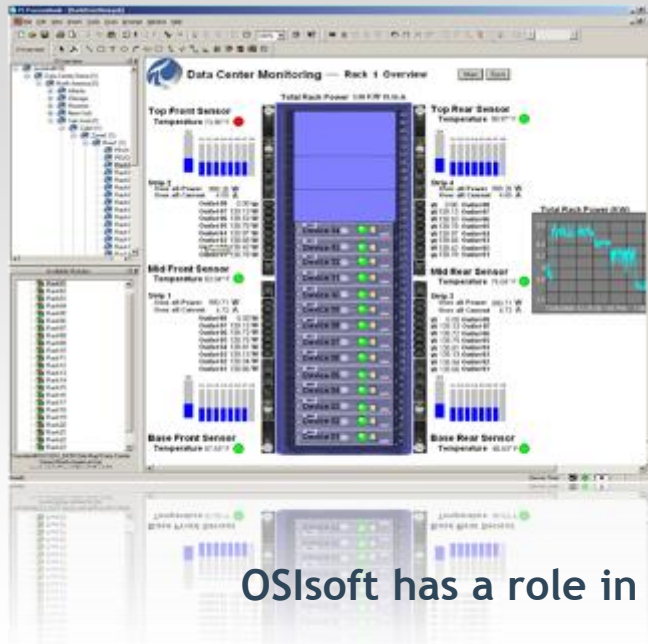

Real Time Needed - Summary of Accidents not useful for Operation - like getting Summary of House Fires at end of Month

New Business - e.g. Data Center

- Consume more energy annually than Sweden
- New NC Facilities - Google for Search, Apple for iPhone Apps
- Expansion of Existing - Bing Search of Twitter, Messaging
- Cloud based Storage - Flickr, Data Storage
- Business - Amazon, E-Bay, Craig's List
- Web 2.0 Sites - Facebook

Industry - Data Centers, IT & Telecom

OSIsoft has a role in this space - the DC is like plant

Microsoft was our first customer

Quincy, WA - 27MW, 500K sq. ft.
Chicago - 60MW, 770K sq. ft.

New Business - e.g. Facilities

- 5 million commercial buildings in USA
- Recent Texas A&M study: buildings degrade up to 25% after 2 years from commission date (or re-commission date)
- Less than 0.1% of existing commercial buildings and 5% percent of new ones undergo commissioning for energy efficiency

Largest Distributed Plant: Smart Grid

- Plant: Power Generation, Distribution and Transmission, Consumption
- Technology: Smart Equipment, Storage of renewable energy, AMI (Demand response pricing), Energy improvements
- Environment: Conservation, Renewables, Carbon Foot Print
- Techniques: Reliability, Energy Monitoring, Efficiency Studies

Evolving Shift from Industrial Age to Information Age

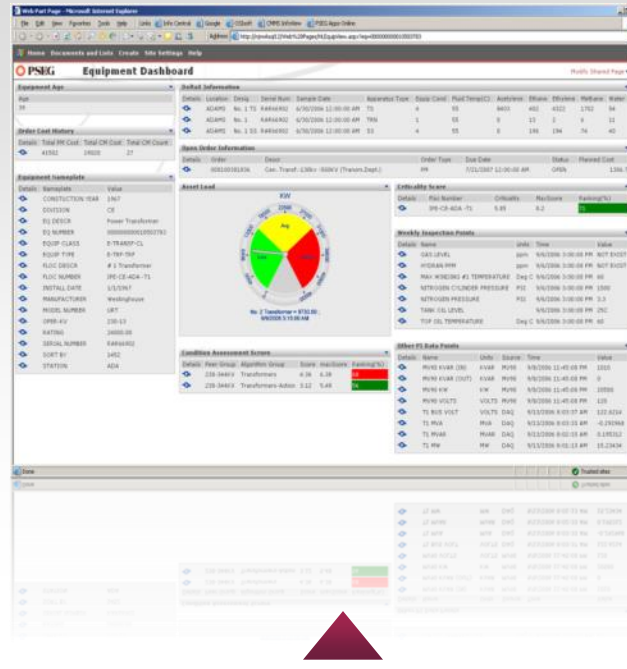

- Telecom industry change - cell phones, VOIP, SMS, Web 2.0, SaaS, DaaS
- Smart Grid is an Enabling Technology
- Rise of Microgrid - knowledge of applying power to manufacturing process - MaaS
- Convergence of Information and Energy
- Learn from deregulation of telecom
- Like Dot.com, will see 100's of failures and a few game changing winners

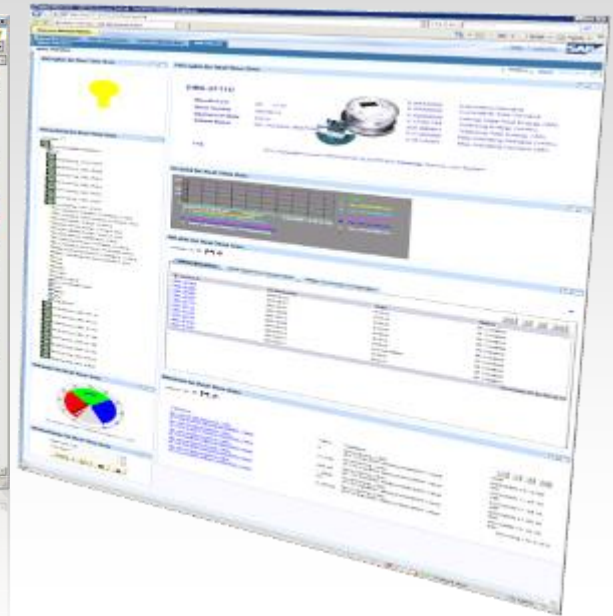

Smart Grid

Power Generation Energy Management Support

Transmission & Distribution Dashboard

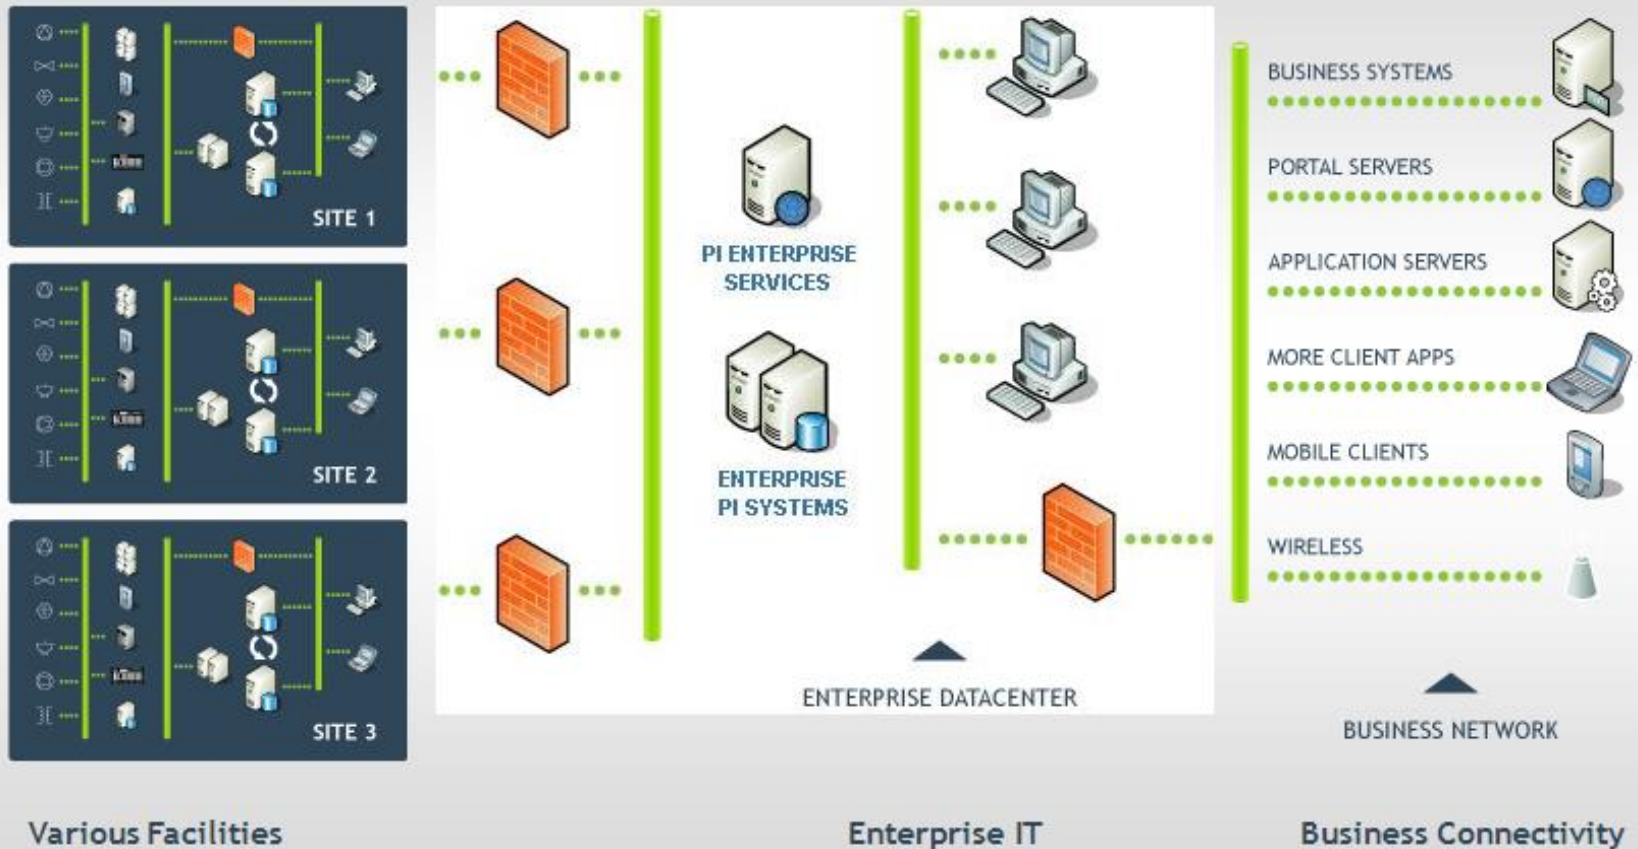

AMI

Role of the PI System:

- Data Capture and Storage
- Distribute to Virtual Collaborative environment
- Event, exception based alerts - work by exception
- Aggregation and Communication of Info to Business
- Goal: rapid deployment & zero maintenance

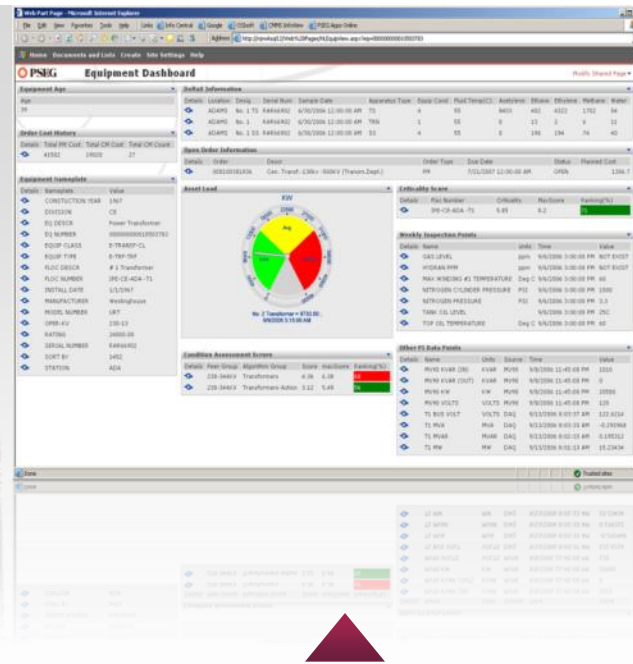

PI Systems across the Enterprise

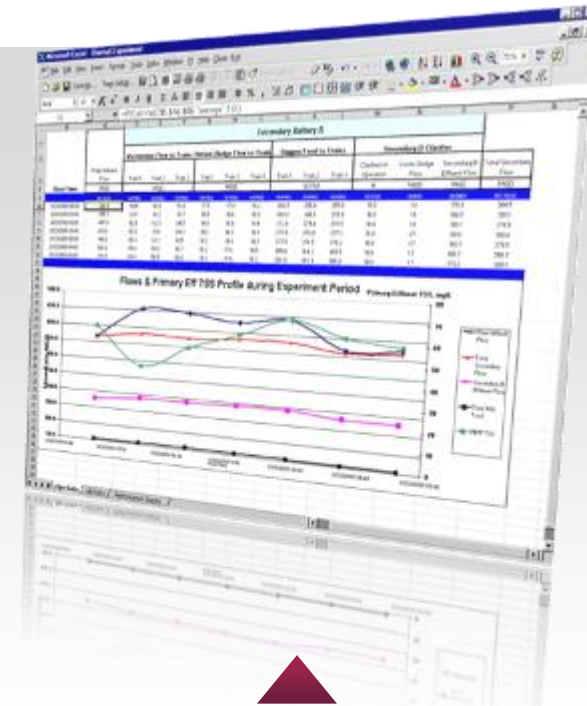

Clarity in Visualization and Collaboration

PI ProcessBook

Web

Excel

Kodak: Collaboration enables optimized energy consumption

“There was no ‘Big Bang.’ Rather, there were 1,000 little bangs. Collectively these efforts have yielded savings into the millions of dollars and established a culture of continuous process improvement.”

James Breeze | Energy Engineer / Project Leader
Worldwide

Customer Business Challenge

- Conservation, optimization of resources, and cost control
- Merge real-time energy data with business processes.
- Film finish bldg 1M sq ft, need % outside air for ventilation, 500 people there but enough air to support 10,000, must heat/cool

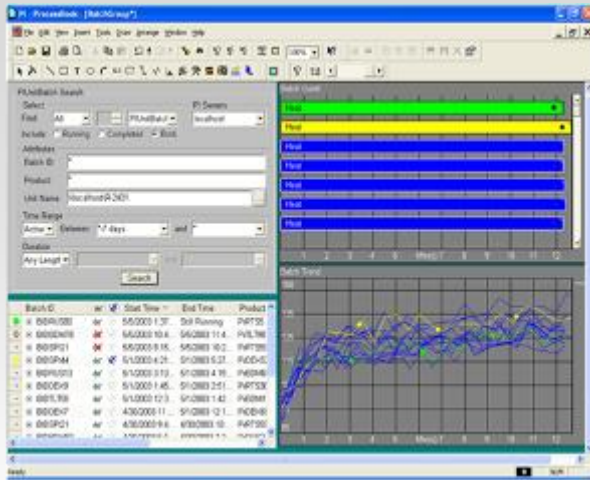

Solution

- Implemented Energy Information System without buying new app
- Used OSIsoft Business Package for SAP Portal with PI
- View and manage Enterprise energy demand with standard OSIsoft interfaces.

Customer Results / Benefits

- Increased ROI on improved demand side management and optimization of power generation assets, saving millions of dollars, annually
- Opportunities in manufacturing to implement an energy conservation mode between product runs.

Event Management

Improve yields from existing assets
(cycle time reduction)

Increase energy efficiency
(company wide energy program)

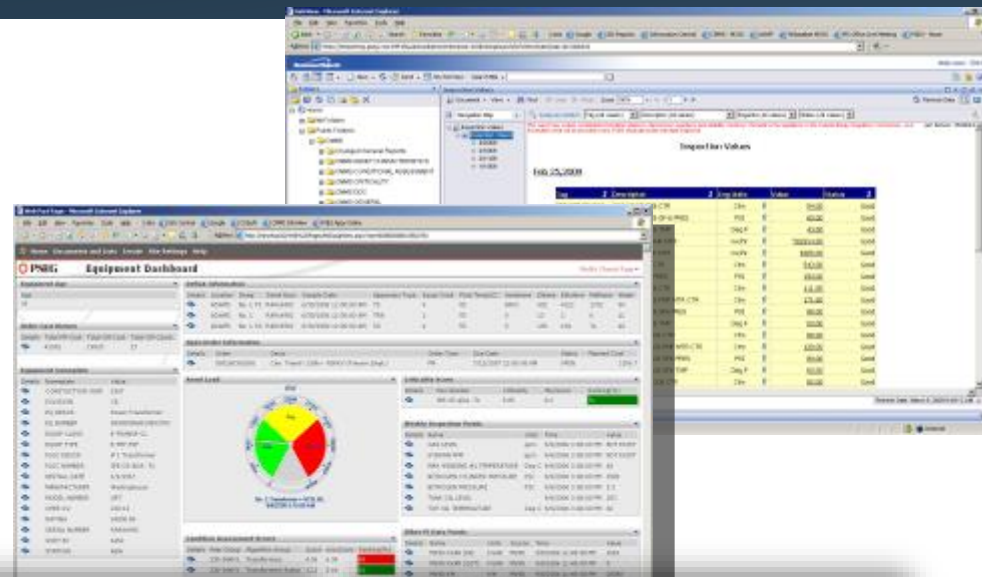

Executive Dashboard

PSE&G: Condition Based Maintenance

“We get a detailed breakdown on equipment costs and man/hours to service that gives us important business benefits. Without the use of the PI System, it would have taken us several months to gather and analyze the information.”

Angela Rothweiler, Principal Engineer

Customer Business Challenge

- Providing the highest reliability Power Distribution is requirement
- Minimize Maintenance Costs

Solution

- Implemented automatic data collection & notifications to SAP PM
- Standard business rules for condition based maintenance using PI - ACE
- Provided focused view into equipment using SAP Portal

Customer Results / Benefits

- Holds Reliability award for Mid Atlantic States last 7 years
- Last month: transformer sounded like jet engine
- LTC stationary & moving contacts burned, next PM due 2015, transformer would have failed, saved \$2M transformer

Value Now Across Industries

POWER & UTILITIES

- OSIsoft is ranked 1st in the power industry
- DTE Energy, PSE&G, Entergy, British Energy, Iberdrola

OIL & GAS

- 100% of the global Top 10 producers use the PI System
- BP, Shell, Chevron, ExxonMobil, Pemex, Total, Petrobras

CHEMICALS & PETROCHEMICALS

- 40 of top 50 Chemical Companies rely on the PI System
- Dow Corning, Eastman Kodak, Cytec, Rhodia

PHARMACEUTICALS, FOOD & LIFE SCIENCES

- Nine of the Top 10 pharmaceuticals use the PI System
- Amgen, Bayer, PDL, Allergan, Johnson & Johnson, Roche

MATERIALS, MINES, METALS & METALLURGY

- The PI System is installed in the world's largest mining companies.
- Cemex, Cargill, BHP Billiton Yabulu, Codelco

PULP & PAPER

- 400 sites from worldwide leaders use OSIsoft to manage their mills
- Abitibi, Cascades, International Paper, MeadWestvaco

CRITICAL FACILITIES, DATA CENTERS & IT

- Innovative use of PI System to monitor complex IT environments
- Microsoft, US Army, Cisco Systems

Value Now with OSIsoft

- Understand the Importance of the infrastructure
- Develop plan to build strategically but act tactically, measure results
- Understand the nature of pressure, take clear action to address, innovate and find new opportunities

“It is not the strongest of the species that survive, nor the most intelligent, but the one most responsive to change.”

Charles Darwin

Thank you
