

Leveraging SAP MII with OSIsoft PI Infrastructure

Presented by Mike Lyons

Empowering Business in Real Time
PI Infrastructure for the Enterprise

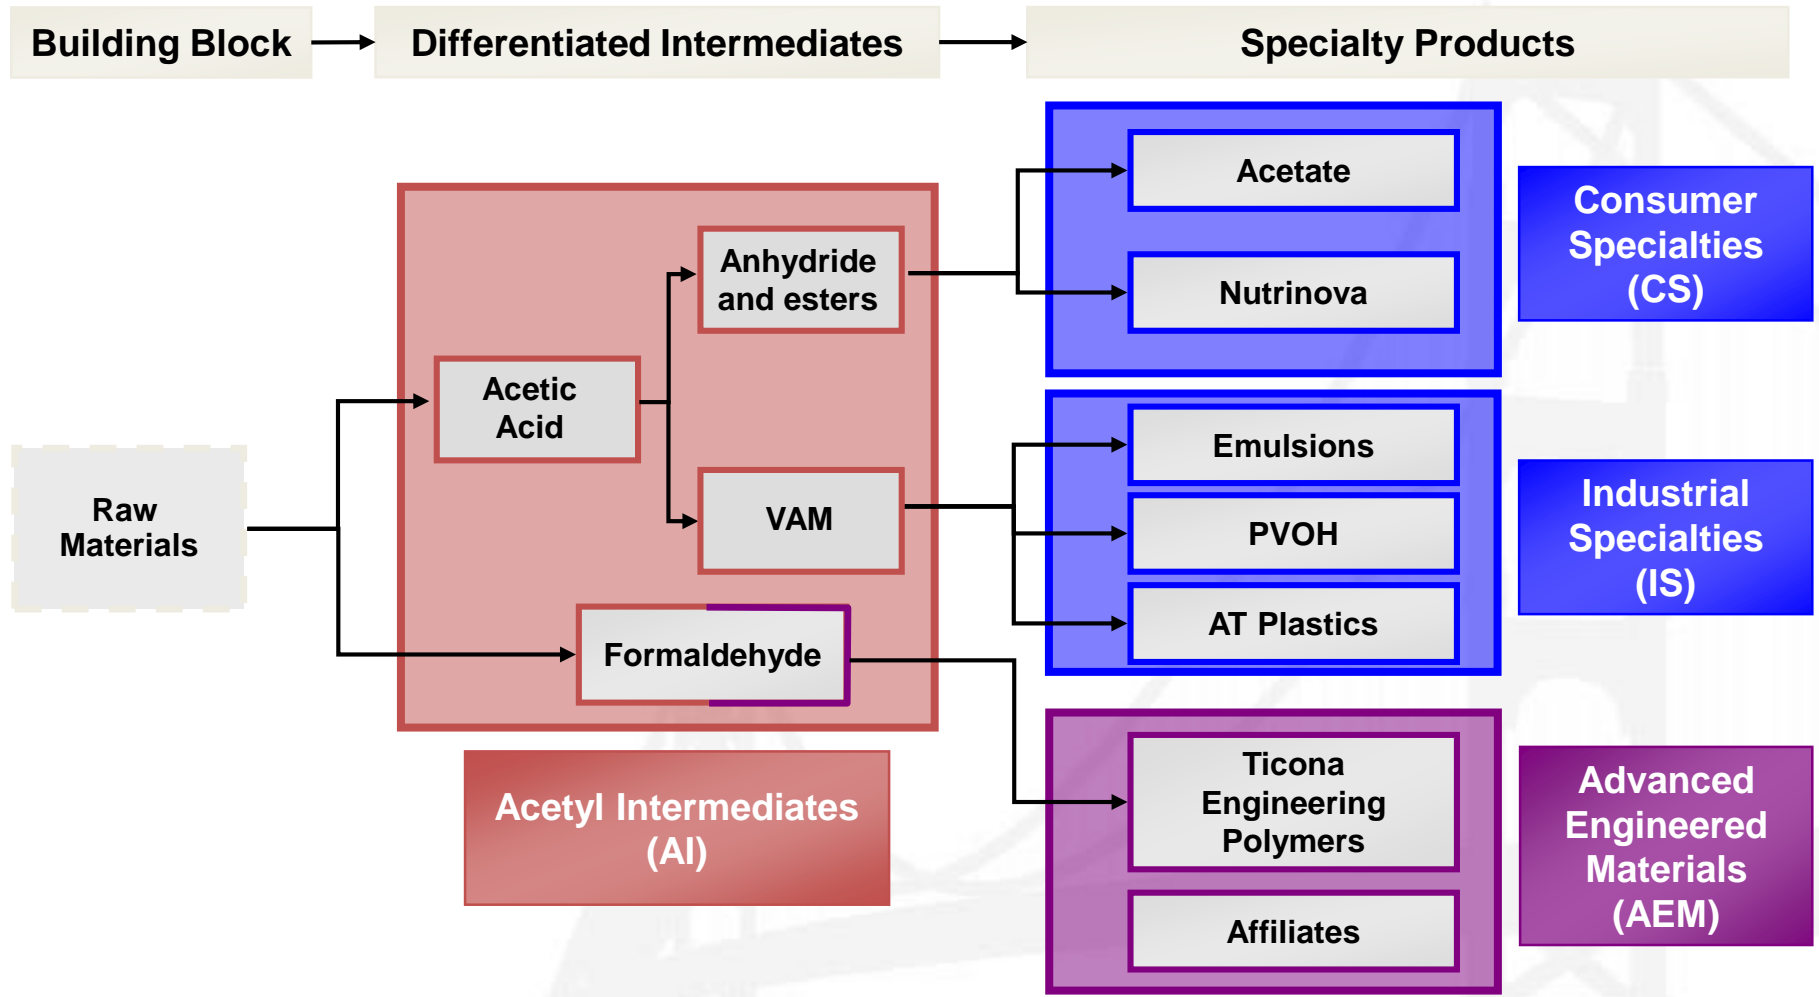

Agenda

- ▶ Celanese Overview
- ▶ Global Integration Challenges
- ▶ MII History
- ▶ PI History
- ▶ Landscape
- ▶ PI Connection Techniques
- ▶ Applications
- ▶ Summary

Celanese is a leading global chemical company

- We produce chemicals and advanced materials used in consumer products and industrial applications
- 95% of our products hold a leading market position
- Based in Dallas, Texas, we have approximately 8,000 employees worldwide.
- Ranked 367 on the Fortune 500 in 2008
- Over \$6.8 billion in sales in 2008

Our integrated businesses are aligned to accelerate growth

A leading global integrated producer

Celanese (\$ in millions)

2008 Revenue^{1,2}: **\$6,823**

Our Core Businesses

Acetyl Intermediates

2008 Revenue¹: **\$3,199**

- ▶ Leading global integrated producer of acetyl products

Consumer Specialties

2008 Revenue¹: **\$1,155**

- ▶ Leading global producer of cellulose acetate products

Industrial Specialties

2008 Revenue¹: **\$1,406**

- ▶ Leading global producer of vinyl emulsion products

Adv. Engineered Materials

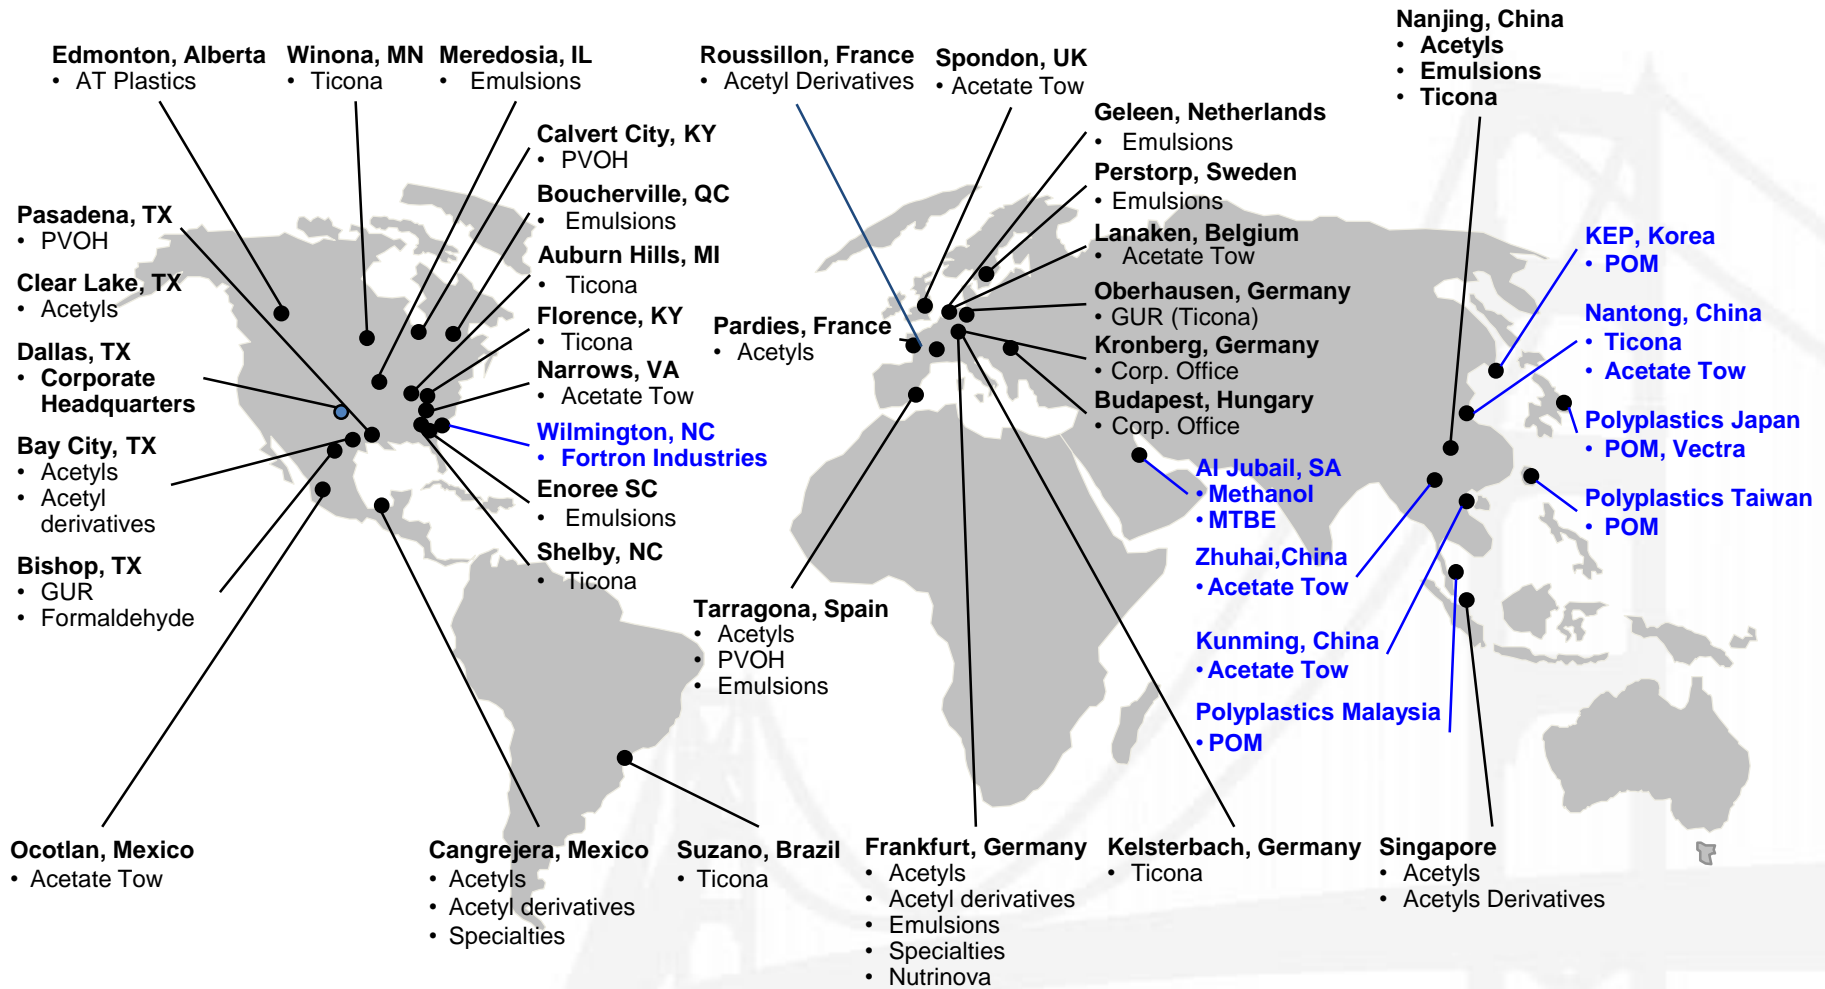

2008 Revenue¹: **\$1,061**

- ▶ Leading global producer of engineered polymers

¹Represents Net Sales

²Total 2008 Revenue includes Other Activities of \$2

Celanese Locations

— Joint Ventures

The Integration Challenge

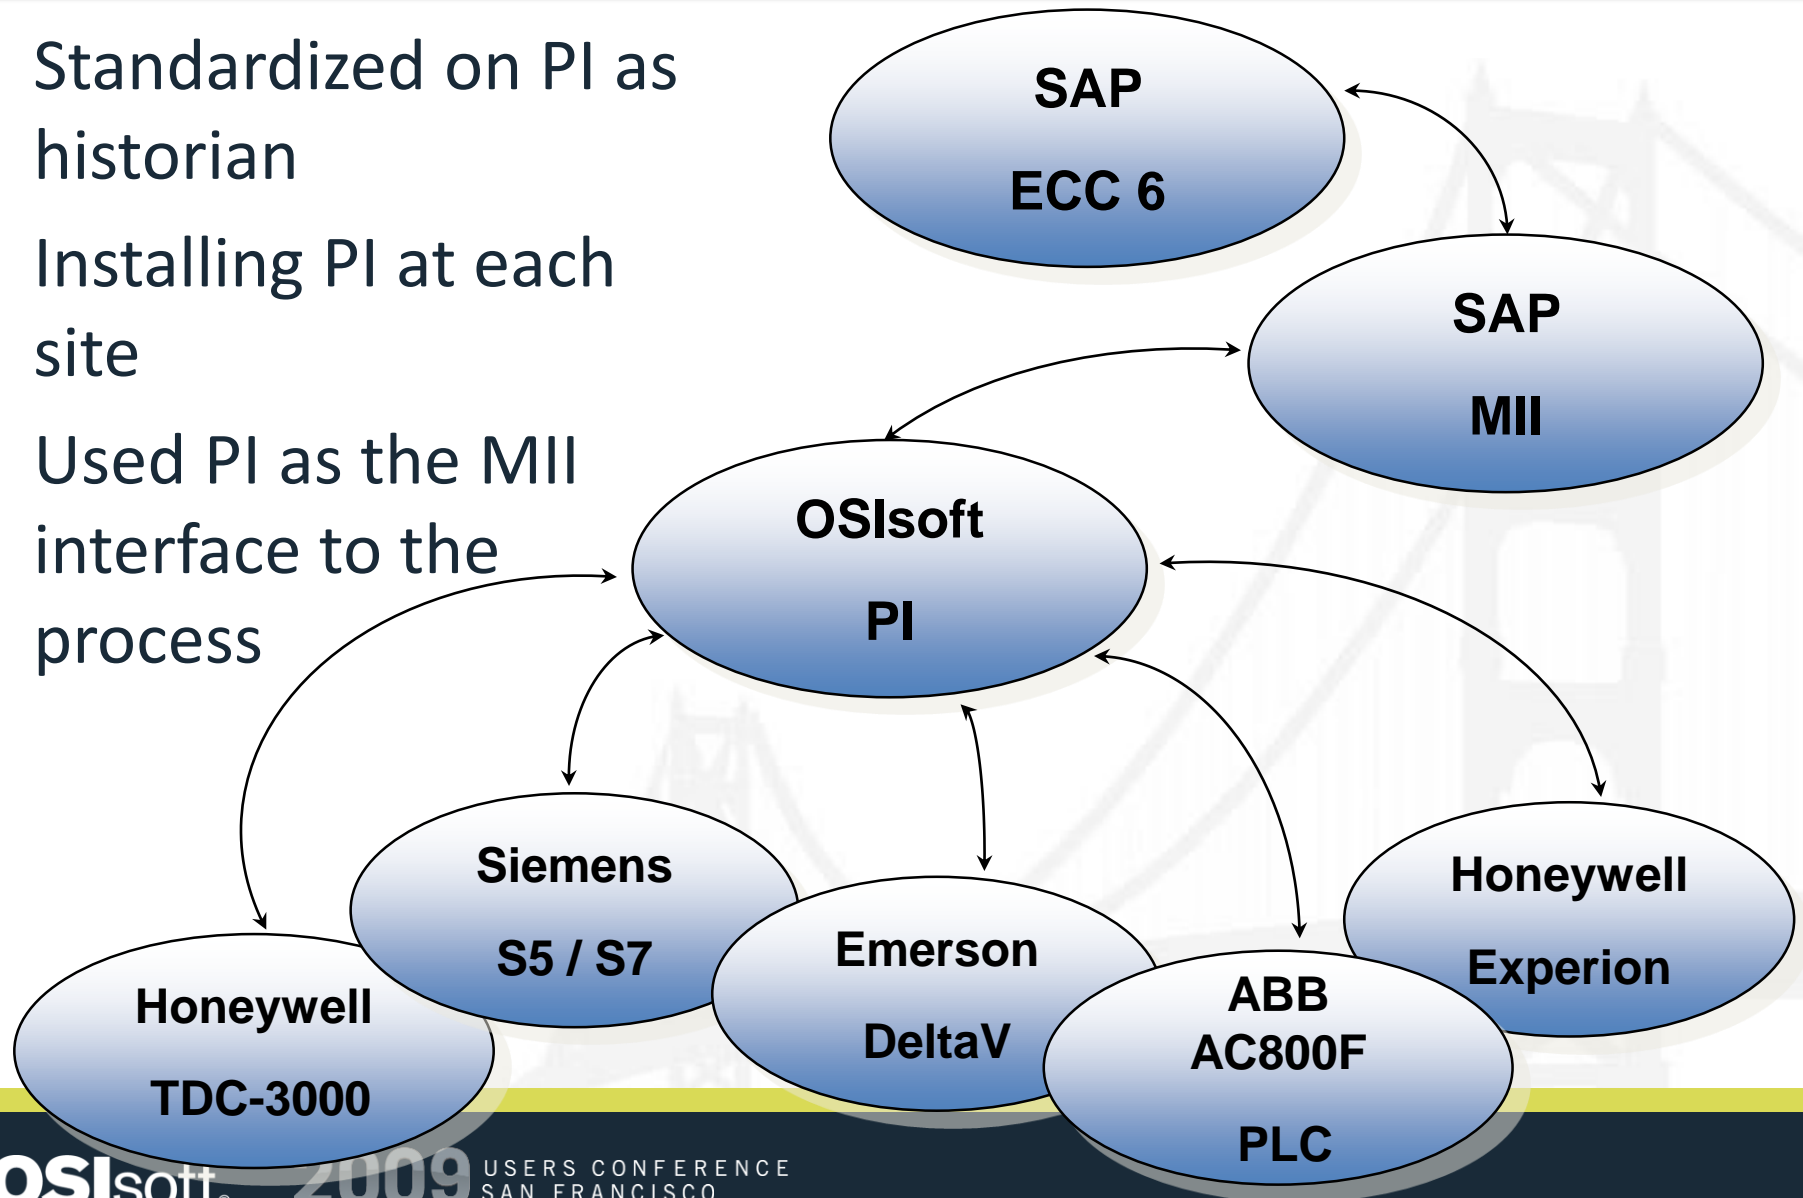

Many process units around the globe with ...

Many different process control systems

PI and MII to the Rescue

- Standardized on PI as historian
- Installing PI at each site
- Used PI as the MII interface to the process

History of SAP MII at Celanese

2004: Bishop Facility project; V10.1; PI UDS

2005: Nine new sites added

2006: MII Team formed; V11.0; PI OLE

2007: Application focus; One new site added

2008: Six new sites added; V11.5

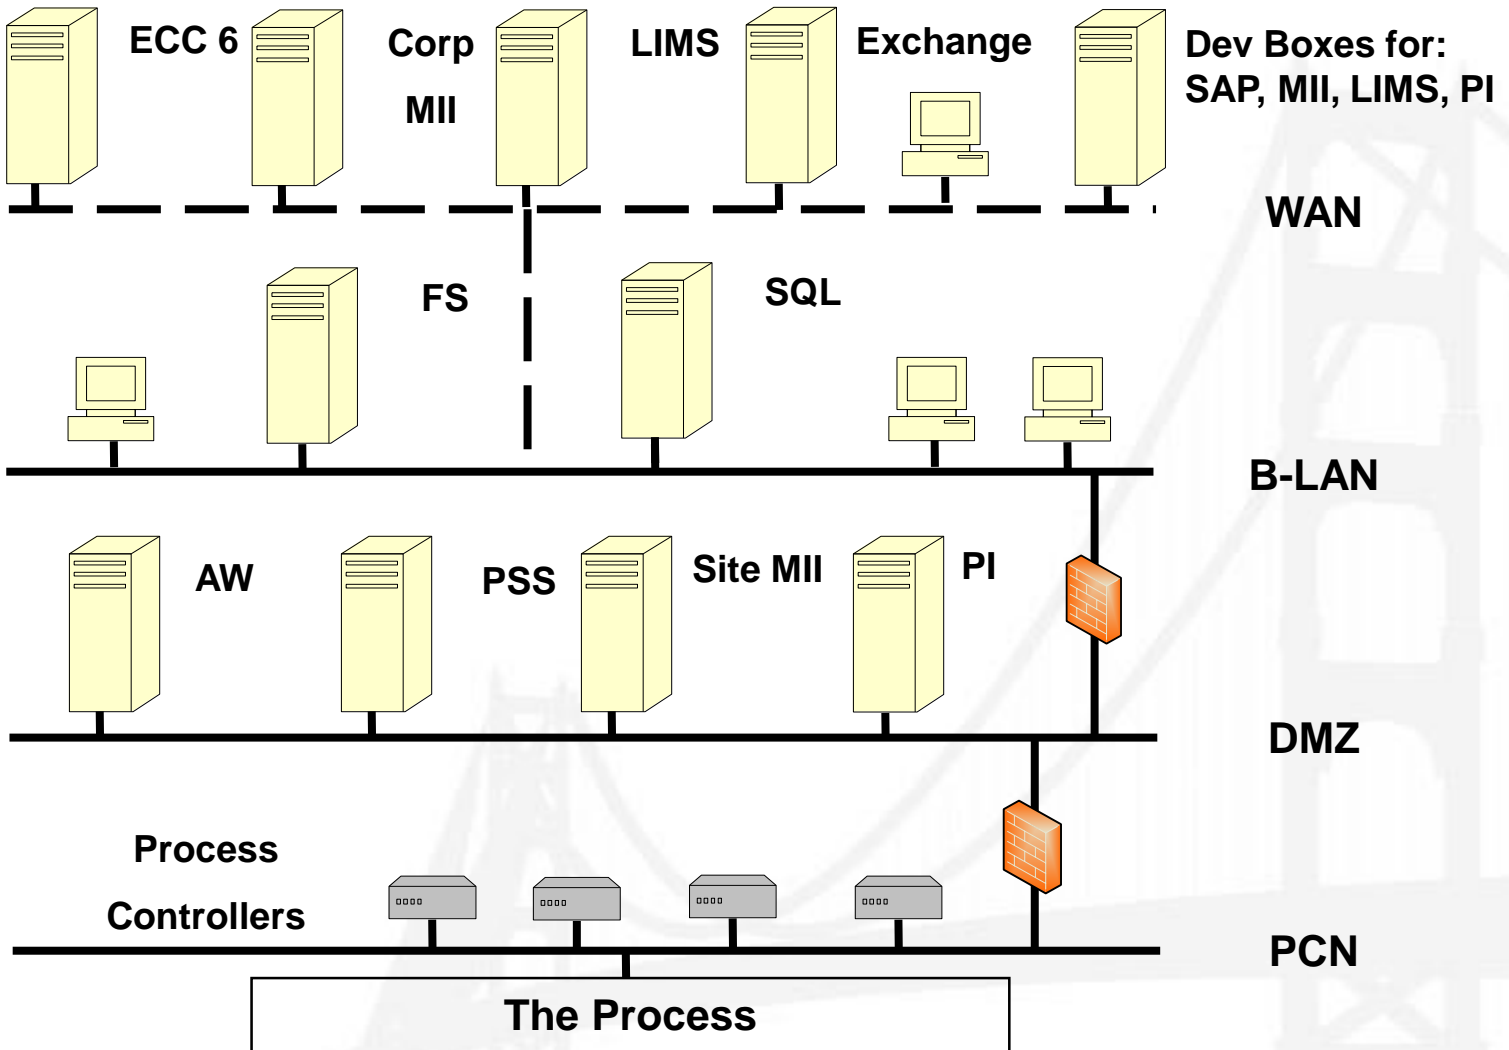

2009: Plant Connectivity Ramp-up

History of PI at Celanese's Bishop Facility

- 1991: First Celanese PI Historian installed at Bishop
- 1998: Platform migration from VAX to Windows server
- 2004: First MII system connected; extensive use of PI-Batch
- 2007: Enterprise Agreement (EA) inked
- 2009: First HA PI system
- 2009: Corporate PI resource
- 2009: NOC monitoring

Key Role of PI in Landscape

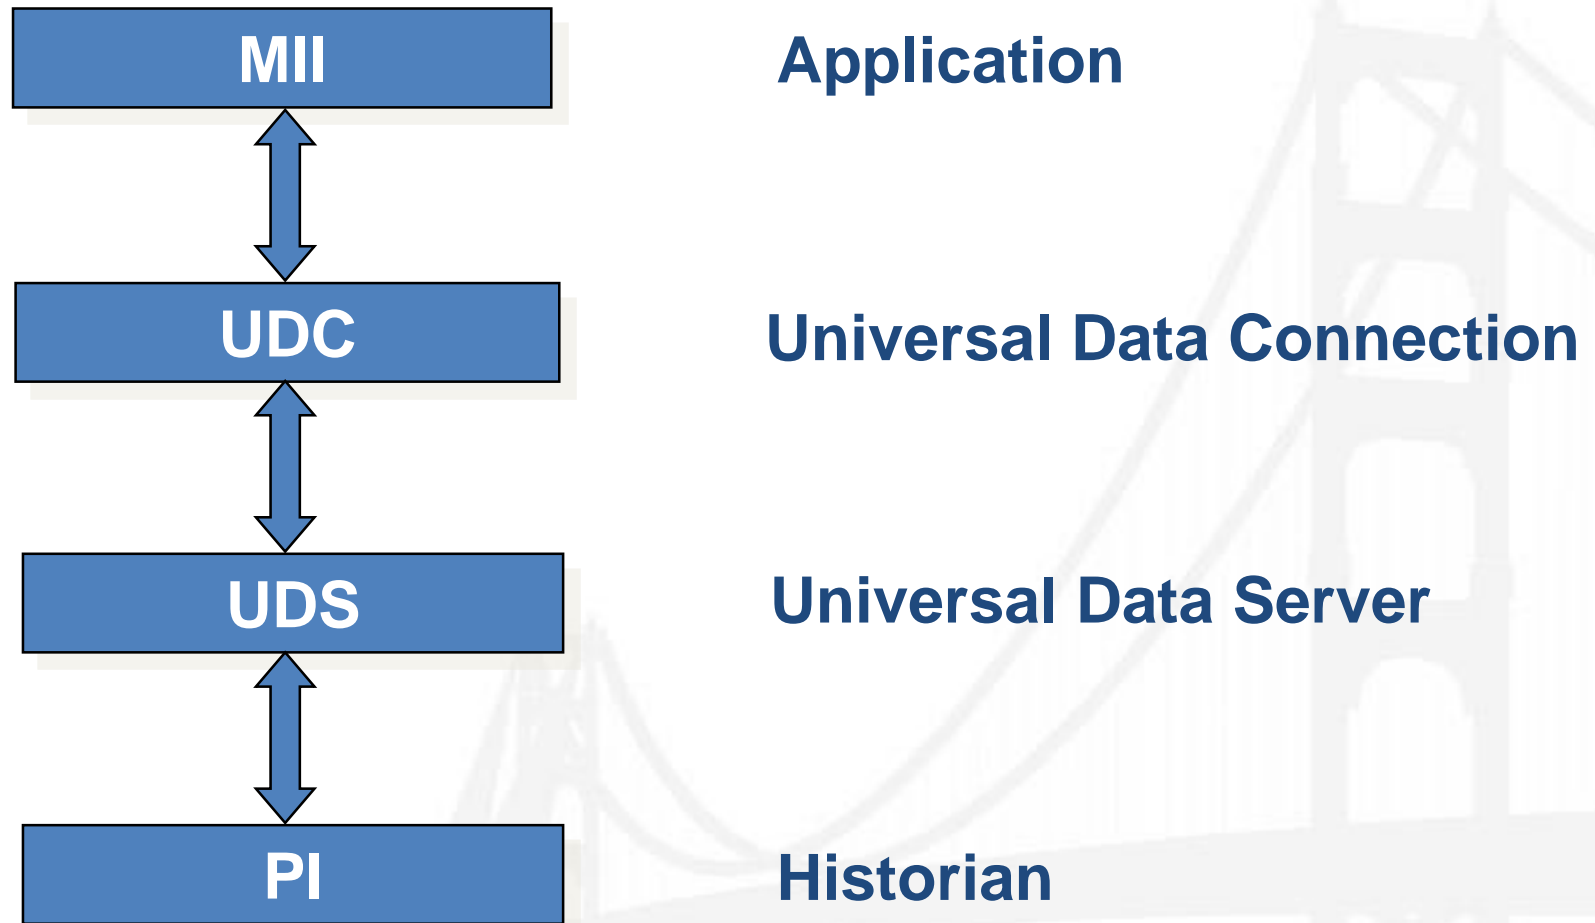

SAP MII-PI Connectivity Methods

- Three connection types:
 - PI UDS (SDK/API)
 - PI UDS OLE (OLE)
 - Plant Connectivity 2.0 (OPC UA)

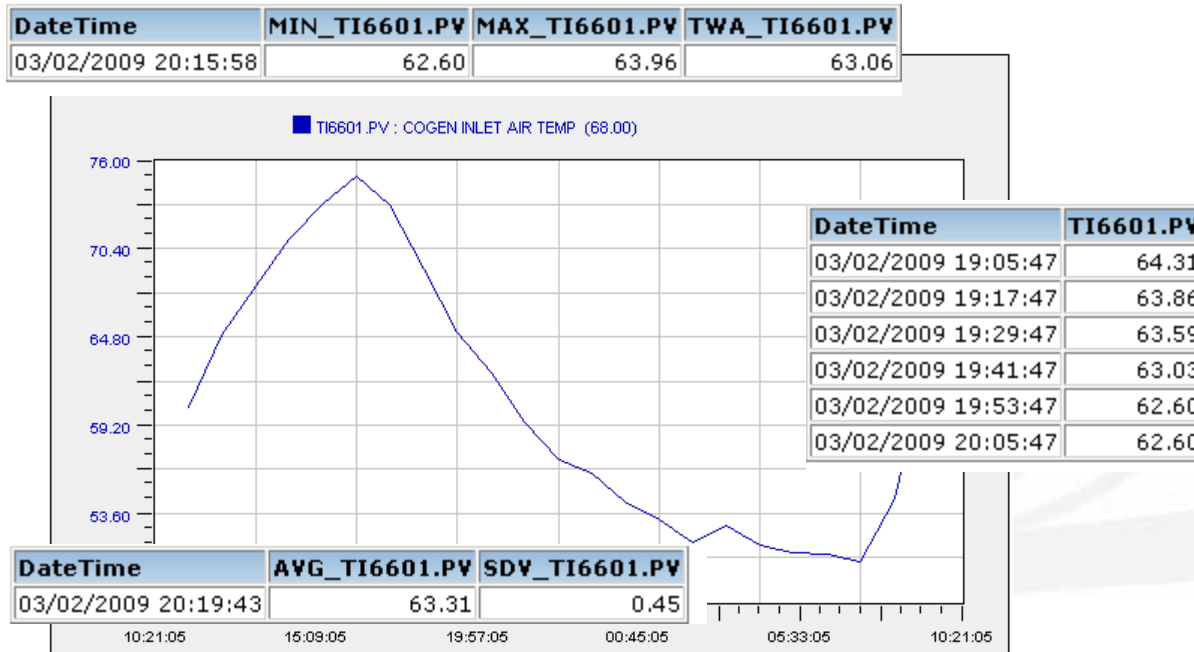

Let's look at each more closely

UDS Connection Framework

PI UDS Tag Queries

- Easy template GUI
 - Fast way to get archive data
 - Common methods supported
- Current
 - History
 - HistoryEvent
 - Statistics
 - Min
 - Max
 - Avg
 - Tot
 - Min, Max, Avg
 - Min, Max, TWA
 - Avg, SDV
 - TWA, SDV
 - CurrentWrite

PI UDS OLE Queries

- Flexible SQL-style queries
- Great for tag attributes and filter expressions

```
SELECT p.descriptor, p.engunits, c.time, c.value
```

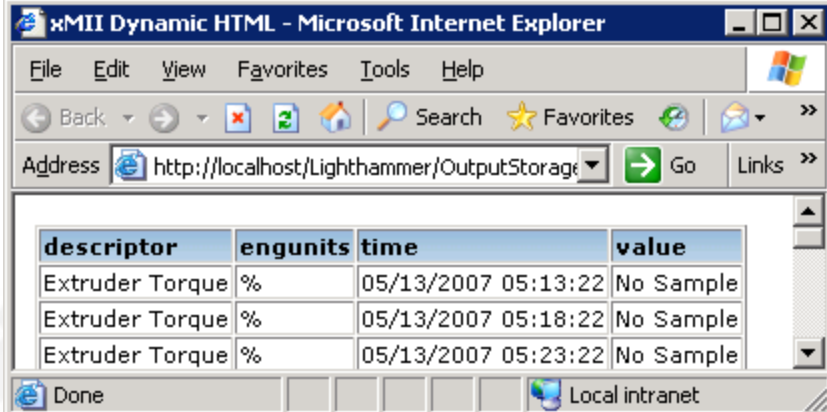

```
FROM piarchive..picalc c, pipoint..pipoint p
```

```
WHERE expr = 'If "[Param.1]" > [Param.3] then " [Param.2] " else "No Sample"'
```

```
AND time between [SD] and [ED]
```

```
AND timestep = '5m'
```

```
AND p.tag = '[Param.2]'
```

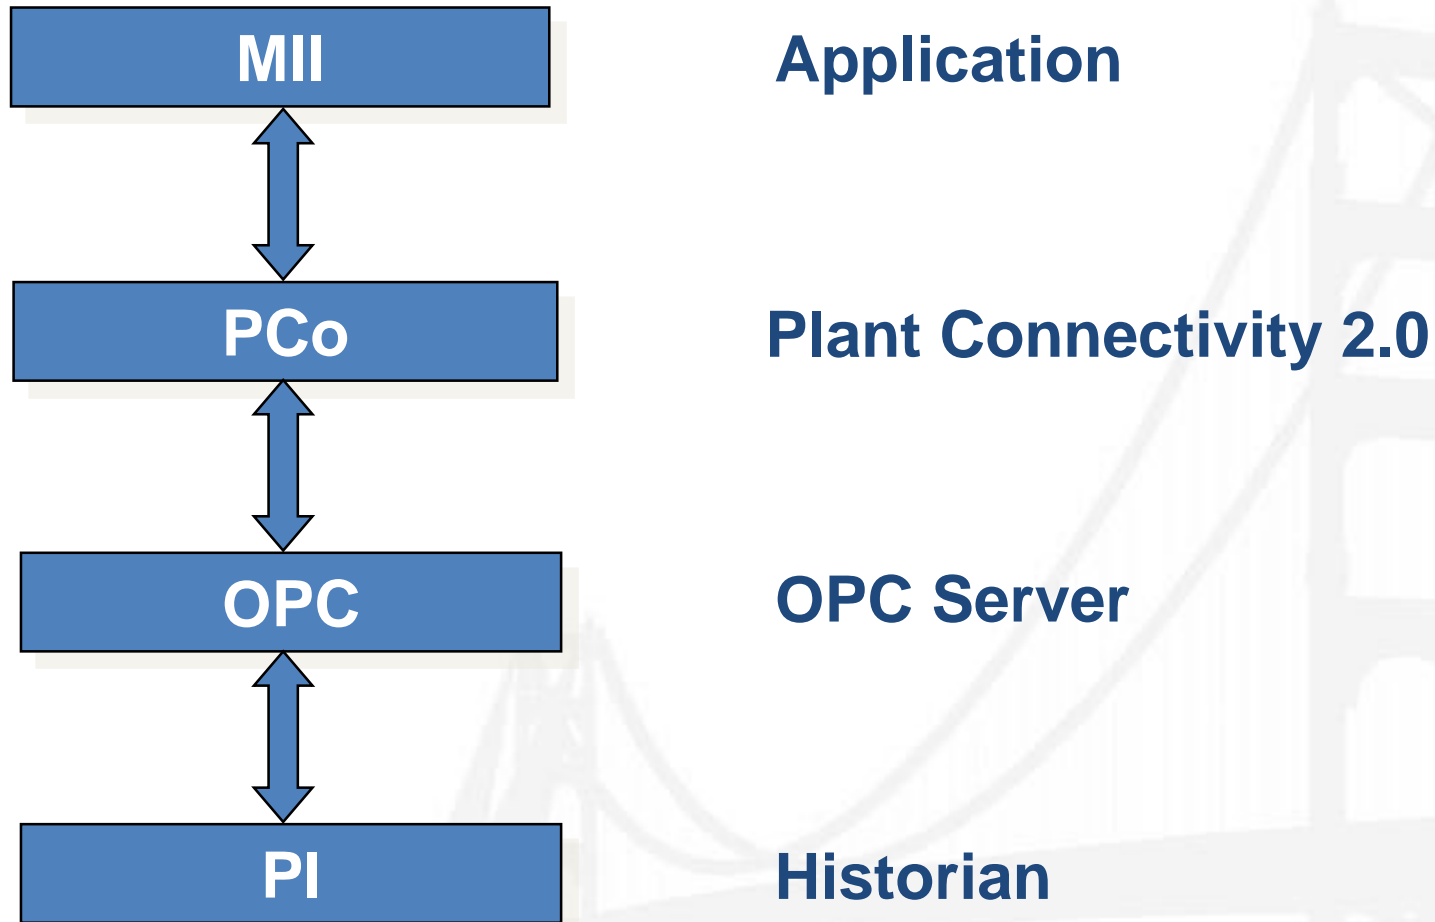

The screenshot shows a Microsoft Internet Explorer window titled "xMII Dynamic HTML - Microsoft Internet Explorer". The address bar displays "http://localhost/Lighthammer/OutputStorage". The main content area shows a table with the following data:

descriptor	engunits	time	value
Extruder Torque	%	05/13/2007 05:13:22	No Sample
Extruder Torque	%	05/13/2007 05:18:22	No Sample
Extruder Torque	%	05/13/2007 05:23:22	No Sample

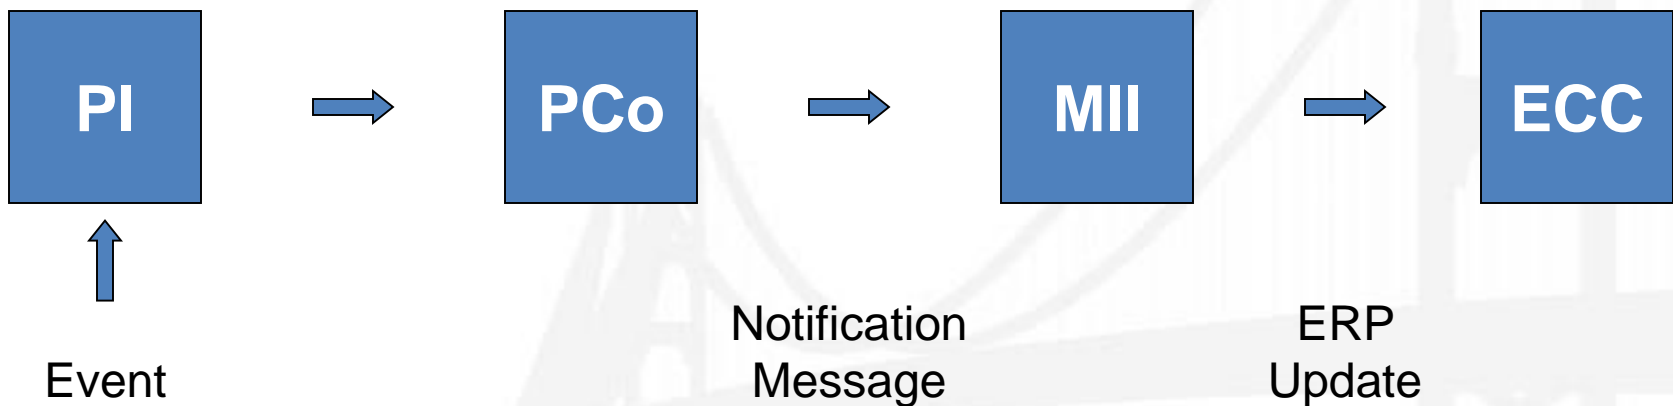

The status bar at the bottom indicates "Done" and "Local intranet".

OPC Connection Framework

Plant Connectivity 2.0

- Agent-based event subscriptions
- Notification messages
- MII can take specific action based on message
- Eliminates MII polling

MII Applications

- SAP Integration
- Machine Setup
- Production Reports
- Schedule Compliance
- Batch Reports

MII Integration with SAP ECC 6

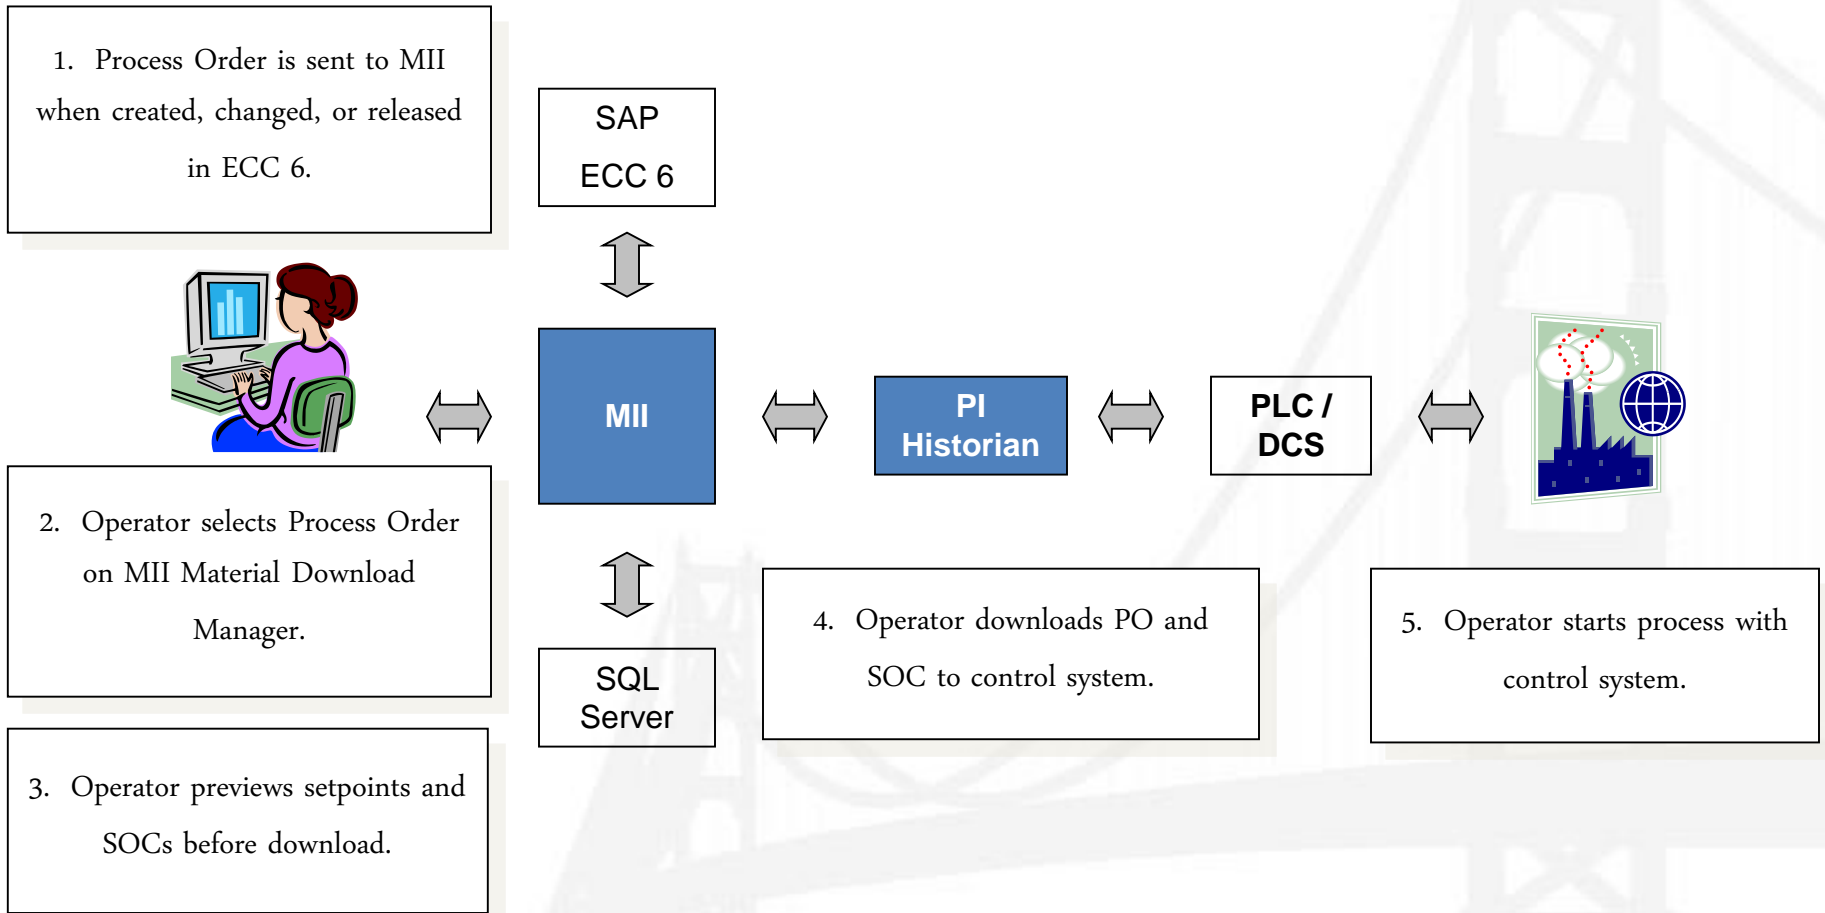

IDOCS

- Process Order
 - LOIPRO
 - Customized content
 - Change pointer table
- Bills of Material
 - LOIBOM
 - Change pointer table
- Received by MII JCo
- Processed by MII BLS

BAPI/RFC

- Standard
- Custom
- Scheduled
- Ad Hoc

Comprehensive data source for batch:

Single source link to all Process order information

Drilldowns:

- Yield
- BOM
- Blend ticket details

Explodable sections for:

- Totalizers
- Customer Complaints
- PI Run data
- Complete lab results

Summary

- PI Historian
 - Key role in Celanese integration strategy
 - Robust process interface to numerous systems
 - Foundation of shop floor integration to ERP
- MII
 - Variety of PI connection and query methods
 - Workflow integration and portal visualization
 - Easy integration with ERP system
