

Towards a Recipe Driven Organization

Presented by **Terry Murphy, Strategic Operations
Pharmaceutical Development &
Manufacturing Sciences**

Overview

- Introduction to Janssen and our challenges
- Defining the recipe based knowledge management strategy
- How the OSIsoft PI System enables that strategy
- Closing remarks

PHARMACEUTICAL COMPANIES
OF Johnson & Johnson

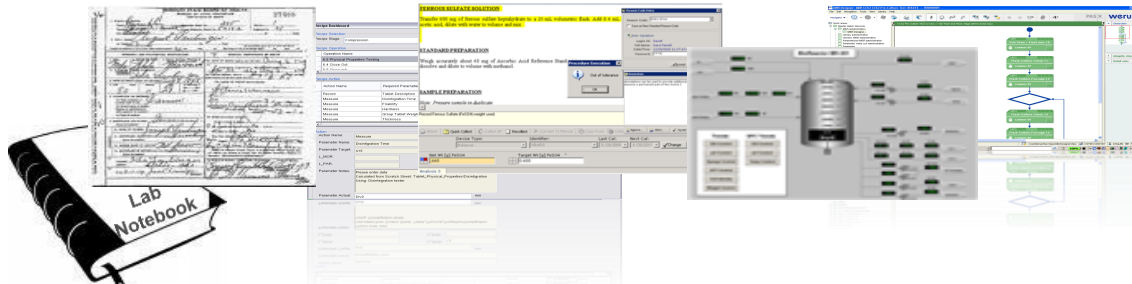

Current State

REACTIVE ANALYSIS

- More time spent on aggregation than analysis
- Lack of knowledge management strategy
- Mix of paper/electronic
- Unstructured data
- Few standards
- Little built-in context
- Efforts mainly focused internally

Lab/Clinical/Commercial

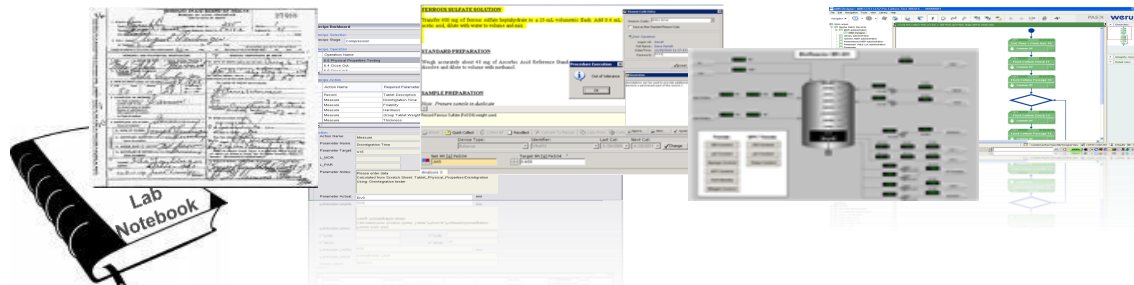

Future State

PROACTIVE ANALYSIS

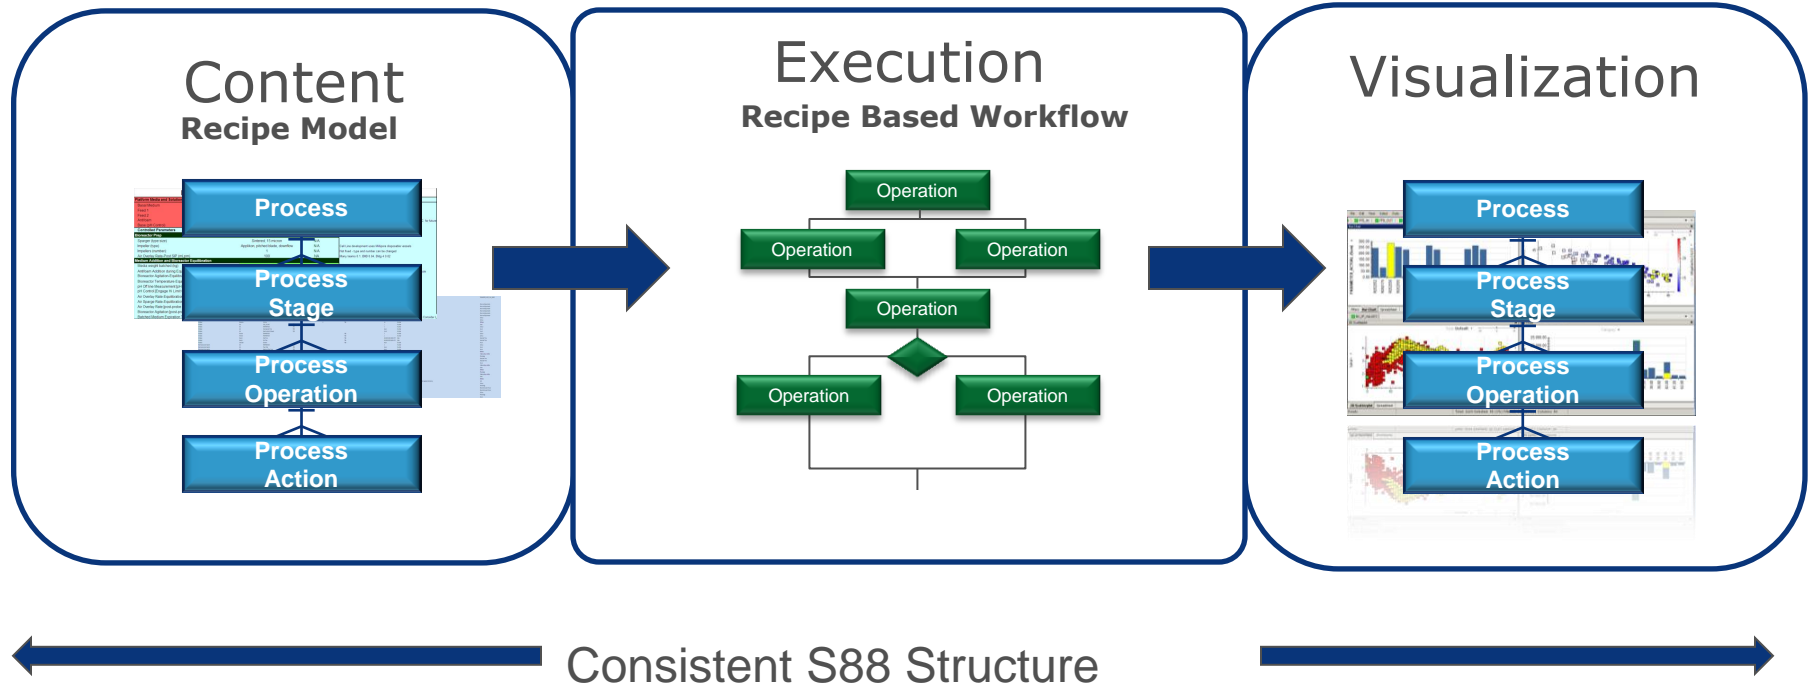

- Automated data aggregation
- More time spent on analysis than aggregation
- Common knowledge management strategy
- Electronic data capture
- Structured data
- Common standards
- Internal/external focus

Recipe Based Knowledge Management

Lab/Clinical/Commercial

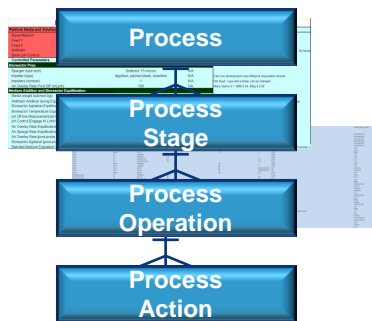

S88 Recipe Based Knowledge Management Strategy

S88 Recipe KM Strategy: Content

Content Recipe Model

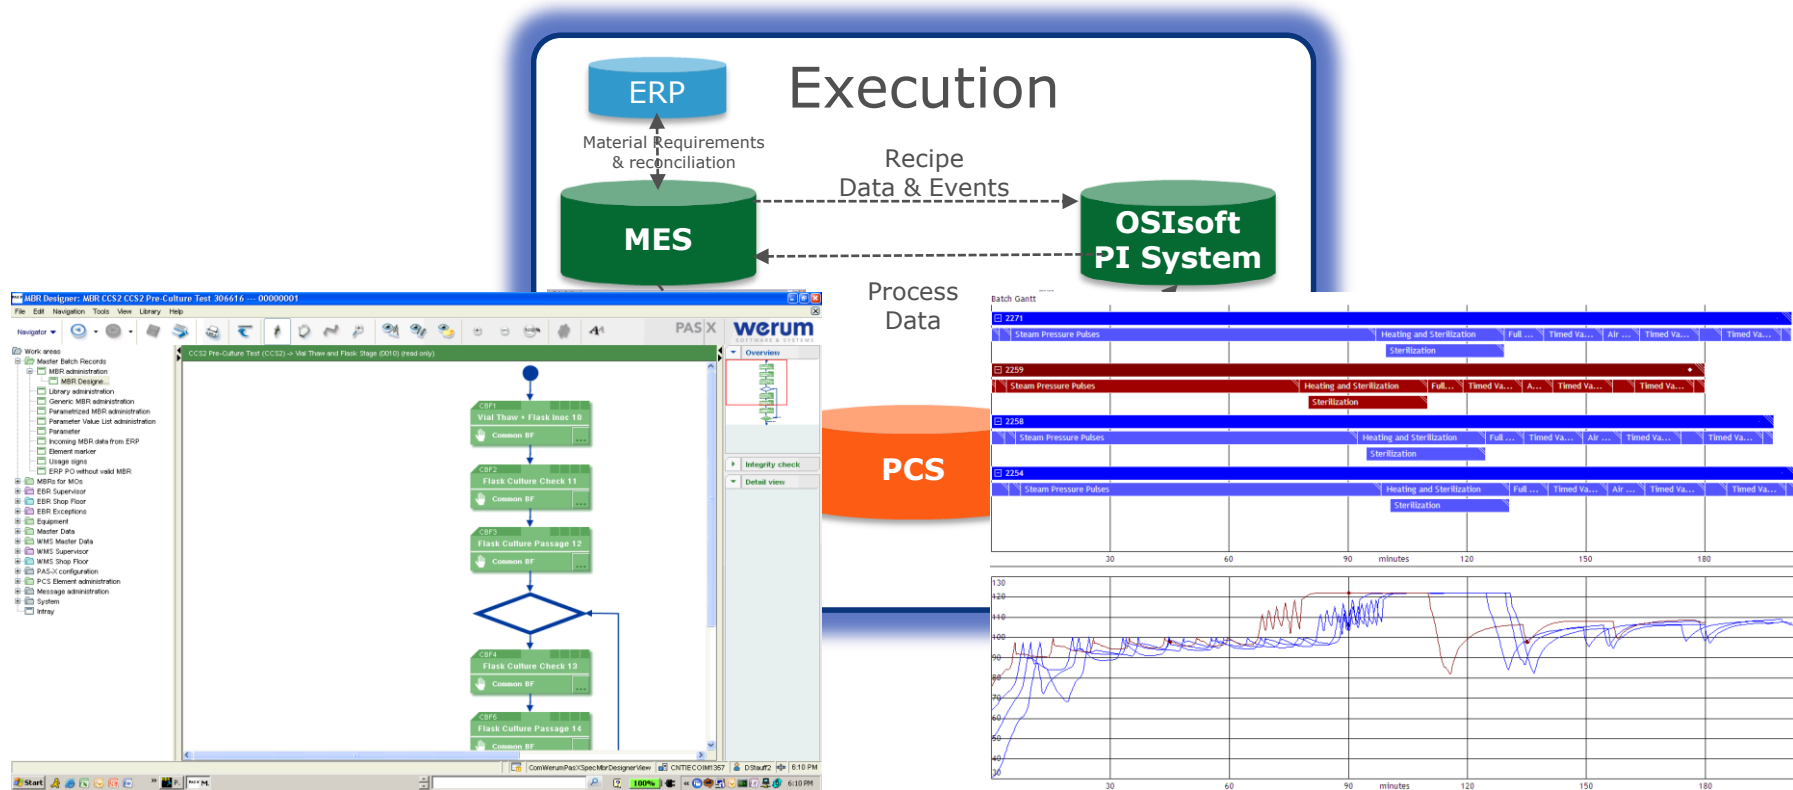

Platform Media and Solutions	CBL#	Comments
Basal Medium	MACH-1 + 8 g/L FB	CBL-024
Feed 1	BRX	CFL-001
Feed 2	G8 (preferred) or G12	CFL-016/CFL-024
Antifoam	Antifoam C (10,000 ppm stock)	N/A
Base (pH Control)	2M Sodium Carbonate	N/A
Controlled Parameters	Target	Range
Bioreactor Prep		
Sparger (type/size)	Sintered, 15 micron	N/A
Impeller (type)	Applikon, pitched blade	N/A
Impellers (number)	2	N/A
Air Overlay Rate, Post SIP (mL/min)	100	N/A
Medium Addition and Bioreactor Equilibration		
Media weight batch/lot	19 ppm	Adjust based on 11-1 cell count
Antifoam Addition during Equilibration	19 ppm	Adjust based on predicted reactor final volume / Linked to Schedule
Bioreactor Agitation Equilibration (rpm)	200	190 - 210
Bioreactor Temperature (°C)	37.5	35.5 - 37.5
pH Off-line Measurement Probe Standardization (mV)	±0.05	N/A
pH Control (Engage Hi Limit Control)	N/A	Adjust on-line pH based on off-line BGA pH
Air Overlay Rate Calibration [DO probe standardization] (mL/min)	N/A	CO2 above high pH limit
Air Sparge Rate Calibration [DO probe standardization] (mL/min)	100	Limitation for some Valley Equipment
Air Overlay Rate [post probe standardization] (mL/min)	100	Does this need data confirmation?
Bioreactor Agitation [post probe standardization] (rpm)	200	Many teams 0.1, BBD 0.04, Bldg 4.0/0.2
Batched Medium Expiration Time [at operating Temp] (hrs)	≤48	Need to compile data with MACH-1 to support this (72 hr better) Consider L

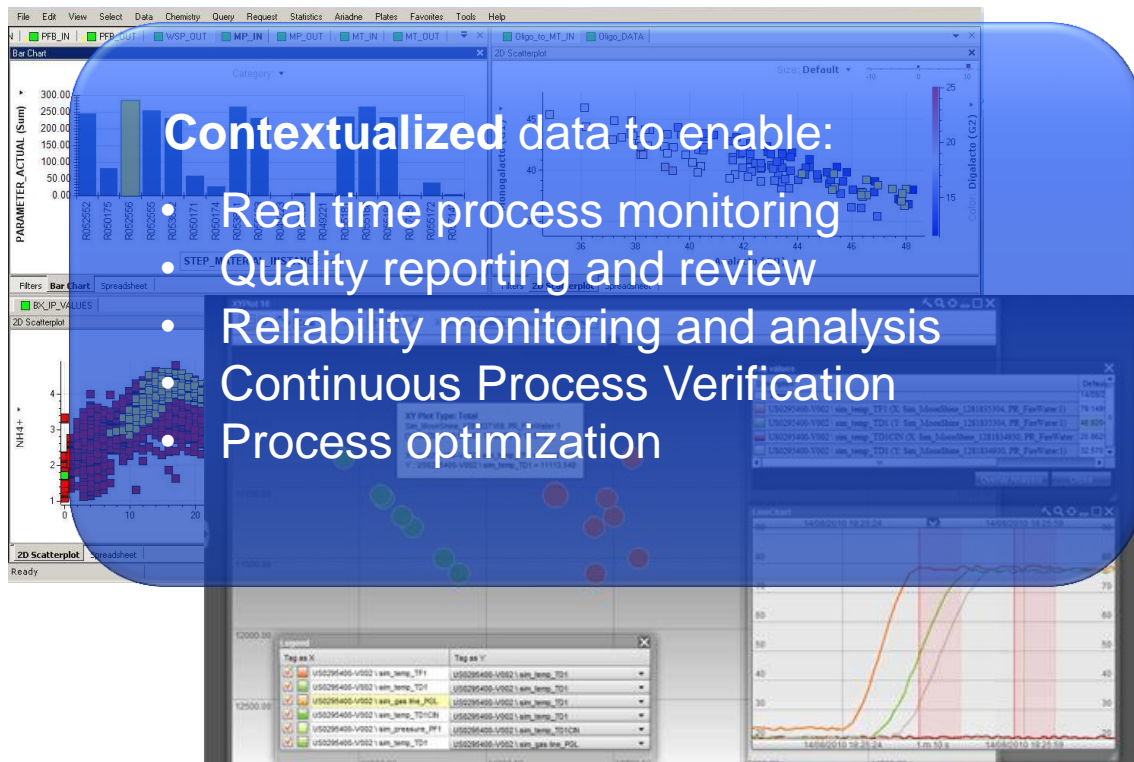

Recipe Step Risks

Step	Risk Asset	Severity	ccurren	Dete	Criticality	RPN
0 Solution Preparation\Add Materials and Mix\Addition:10	0 Addition:10	5	2	7	15	105
0 Solution Preparation\Add Materials and Mix\Addition:11	0 Addition:11	8	2	5	16	80

Context rich data

Value of the OSIsoft PI System

- Very disparate systems landscape
 - ranging from distributed process control systems with inherent historian capability to stand-alone instruments with paper printouts
- Require capability to capture and aggregate data for visualisation, reporting & analysis

OSIsoft PI System ~ System Independent Enterprise Data Presentation Layer

Value of the OSIsoft PI System: Future

- Very disparate systems landscape – now including MES, ELN, Manual Data Entry...
- Ability to share contextualized process data with external partners is critical
- Require capability to capture and aggregate data for visualisation, reporting & analysis

Conclusions

- Janssen is actively driving forward on S88 KM Strategy:
 - Content: Defining platform recipes
 - Execution: Aligning systems to S88 Platform definitions
 - Visualization: Building advanced analytical and modeling tools to help scientists and engineers gain advanced understanding of our processes
- A solution is required for a source independent data aggregation layer to include contextualized data from multiple enterprises.
- Collaboration with other companies would help drive this solution.
