

Introducing the Small Private Online Courses

Presented by **Dineshkumar Ambalavanan**, Customer
Support Engineer

Training Challenges

*Learning Style
Flexibility*

*Cutting Edge
Technology*

Reduced Costs

Less Commuting

Small Private Online Courses

Course is **three weeks** long

Course comprises **short video lectures**, self-serve exercises

Leverage other students and OSIsoft experts in the community

The final project is REAL WORK and done using the customer's own data = REAL VALUE

Certificate of Participation

Learn the PI System (improve skills) using your own data (meaningful) at your own pace (light footprint)

First Week

Consumed all **video** lectures

Established a presence in the **community** and has made some contribution to the course discussions.

Conceived of a **final project**.

Second Week

Completed all of the **self-paced** exercises.

Communicated their final project to the instructor and received **approval**.

Possibly completed a **first draft** of the final project.

Third Week

Submitted all materials related to their final project to the instructor for **evaluation**.

DEMO

What learners are saying:

"For me this online course was a lot more helpful than the in-person training class I took. The main difference was if I missed something I didn't have to hold up the entire class to figure it out. I could just click a minute back on the video. Also if I got (busy).... I could continue with my regular work and then go back to the video when I was free."

"The whole time (while watching the videos) you didn't lose attention, you were doing something along the way."

"Amazed to see how easy it is to use PI ProcessBook, it's not that difficult."
