

Transform Data into Information

for Real-time Decision Support

Presented by **Ken Startz, OSIsoft**

What's the status?

Is there a problem?

What do I need to do?

Information helps you make good decisions, quickly

A look at decision-ready information

A look at decision-ready information

A look at decision-ready information

A look at decision-ready information

How do you transform data into decision-ready information?

Context and Standardization

What is context?

Wind speed

3.7 kts

Upper limit:
50 kts

Gabsheim, Germany

Acme Windmill

10 minute average

Power 0 kW

PI Asset Framework organizes context and relationships

The screenshot displays the PI System Explorer interface. On the left, a hierarchical tree shows the structure of the system, with 'Germany' and 'Gabsheim' highlighted. A map of Germany is shown in the background, with a blue dot indicating the location of Gabsheim. The right pane shows the details for the element 'DE-W-GABSHE-417'. The 'General' tab is selected, showing a table of attributes. The table has a 'Category' column and a 'Value' column. The 'Power' category is highlighted, and the 'Wind' category is also highlighted. A red box highlights the 'Power' category, and a red box highlights the 'Wind' category. A red box highlights the 'Power' category, and a red box highlights the 'Wind' category.

Problem: 0 kW

Category	Value
Power1min_AVG	0 kW
Power10min_AVG	0 kW
Power10min_AVG_Vendor	0 kW
WindSpeed1min_AVG	3,7083334922790...
Windspeed10min_AVG	3,5846667289733...
Windspeed10min_AVG_Vendor	3,5999999046325...
WindSpeed10min_Max	4,7000002861022...

Context leads to faster response

Assets

Common Terms

A screenshot of a software interface titled "Gas Turbine Template". It shows a table with two columns: "Name" and "Unit Of Measure". The table lists various parameters related to a gas turbine, such as "Compressor Discharge Pressure", "Compressor Discharge Temp", "Compressor Inlet Temperature", "Exhaust Gas Pressure", "Exhaust Gas Temp - #1 Probe", and "Exhaust Gas Temp - #2 Probe".

Name	Unit Of Measure
Compressor Discharge Pressure	rel. bar
Compressor Discharge Temp	degree Celsius
Compressor Inlet Temperature	degree Celsius
Exhaust Gas Pressure	rel. bar
Exhaust Gas Temp - #1 Probe	degree Celsius
Exhaust Gas Temp - #2 Probe	degree Celsius

Relationships

PI Asset Framework

Allows anyone to quickly understand data and how assets are related.
Preserves domain knowledge and reduces on-boarding times.

Templates enable rapid roll-out and **standardization**

- **Faster** deployment
 - Standardize attributes and KPIs
- **Facilitate** asset management
 - Centrally push updates to all assets
- **Reuse** visualization screens
 - See consistent displays for similar assets

Renewable power company uses PI Asset Framework in strategy to save 2.6M euros

“Look and Feel” – Asset view in PI Asset Framework

- “Copy/paste” tree structure
- Standardization of Assets using Templates
 - generic (90%)
 - specific (5%)
 - analytics (5%)
- Triple structure views
 - Assets by location
 - Assets by owner
 - Assets by energy flow
- Benefits of using PI AF
 - Big time savings
 - No errors when adding new assets

The screenshot shows the PI AF Explorer interface. On the left, a tree structure lists assets under various locations like Germany, Baden-Württemberg, and others. On the right, the 'General' tab for asset 'DE-W-GASHE-417' is displayed. It shows a table of values for different categories: Averages and Calculated Values. The table includes columns for Name and Value.

Name	Value
Power 10min_AVG	0 kW
Power 10min_AVG_vendor	0 kW
WindSpeed 10min_AVG	3,708,333,492,2790...
WindSpeed 10min_AVG_vendor	3,58,466,7289,733...
WindSpeed 10min_Max	4,700,000,286,1022...
DailyProduction	17805,333984375
Heading	0.028061157311...
NormalisedTheoreticalPower	17347 kW/h
ProductionYesterday	17805,333984375...

“Before, it took us **1 week** to connect, **2 weeks** to find mistakes.”

“[With PI AF] You pick **templates**, apply the template, and you can be quite sure that the values will be **correct.**”

Dr. Thomas Weiss, JUWI

Calculations & KPIs

PI AF templates put data into a standard, **consistent** format

Asset analytics turns data into **KPIs**

Easily track **site-level** metrics with **rollup** capabilities

Well Pad 035

General Child Elements Attributes Ports Analyses Version

Name Backfilling

Oil Flow Rate Rollup

Well Pad Volume Flow Rate Rollup

Name: Oil Flow Rate Rollup

Description:

Categories:

Analysis Type: ☐ Expression ☒ Rollup

Rollup attributes from

☒ Child elements of Well Pad 035

☐ This element - Well Pad 035

To select attributes set criteria below

Attribute Name: Oil Flow Rate

Attribute Category:

Attributes

Name	Parent Element
✓ Oil Flow Rate	OW-259
✓ Oil Flow Rate	OW-262
✓ Oil Flow Rate	OW-258
✓ Oil Flow Rate	OW-261
✓ Oil Flow Rate	OW-260

Heineken uses KPIs to save water, energy, and reduce costs

We can check in real time the efficiency, pressure, power, and flow.

Also we check efficiency values for the last 24 hours, last week, and last month.

Consuelo Carmona Miura
