The Upcoming PI-DataLink 3.x

By Jason King and Ling Mok

PI-DataLink Basics

- What is PI-DataLink?
 - PI-DataLink is a PI client used to transfer data for PI tags between PI servers and your spreadsheet.
 - Spreadsheets supported: Excel and Lotus 1-2-3

New Features for Datalink 3.x

- SDK Based
 - Time Zone
 - Advanced Event Information (Quality Bits)
 - Questionable
 - Substituted
 - Annotated
- Enhanced Calculation Features

The Old PI-DataLink

- Calculations accepts one tag as a data source
- All Calculations are Time Weighted
 - Except for Mean

PI
Tag

Calculation
Type

Output

Enhanced Calculation Features

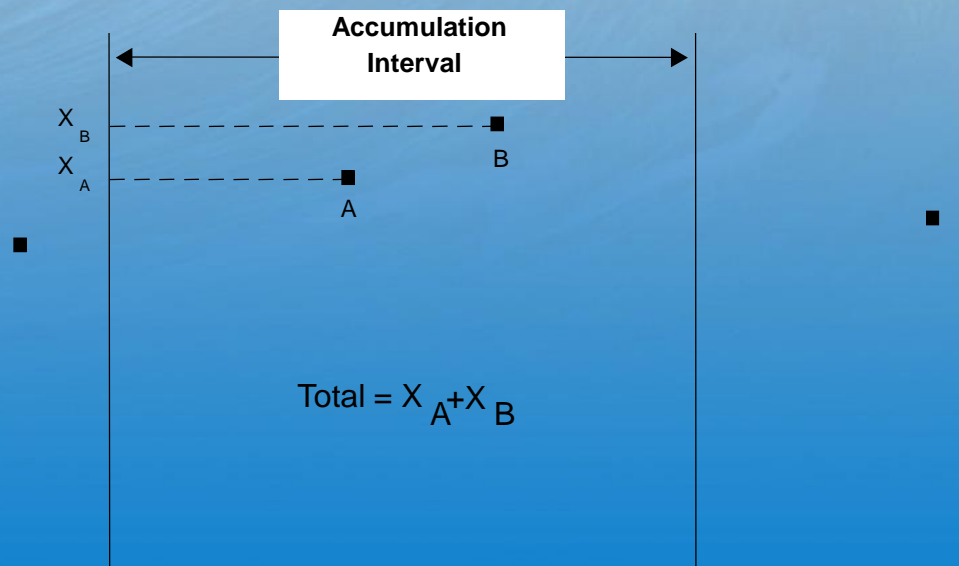

- Advanced Data Source Specifications
- Event Weighted Calculations
- CountTrue
- Naturally Sampled Expression Calculations

Advanced Data Source Specifications

- PI expressions (i.e. TagA + TagB)
- Data Source can be data directly from spreadsheet
- Filter Expressions

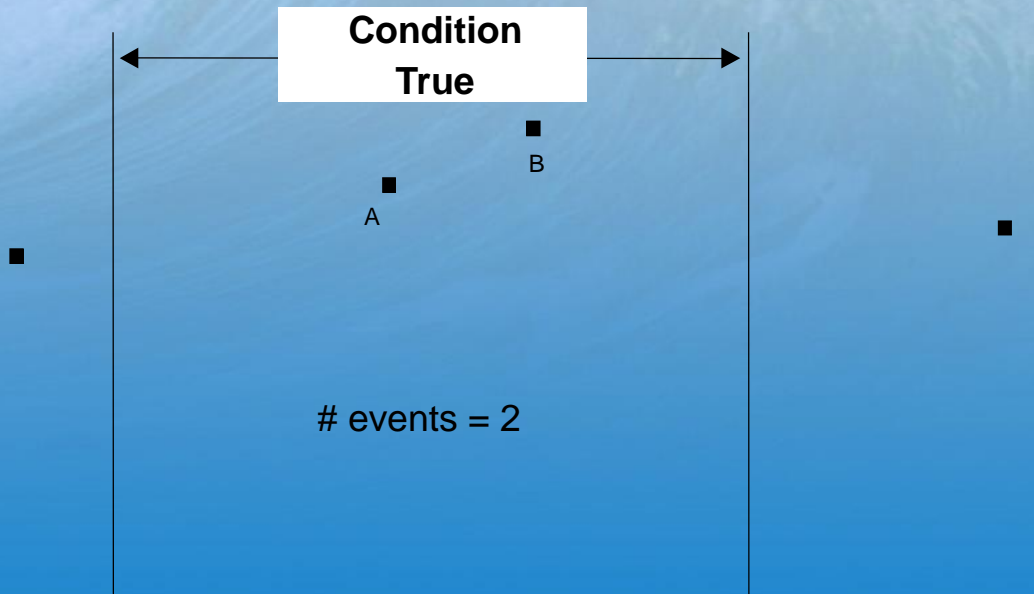

Event Weighted

- Total
 - Sum of compressed values on curve during time period

CountTrue

- Calculates number of events in condition

Naturally Sampled Expression Calculations

- Natural Sampling
 - Evaluate expression at archived values as opposed at evenly spaced intervals

Evenly Sampled

Naturally Sampled

New Calculated Data Flow Diagram

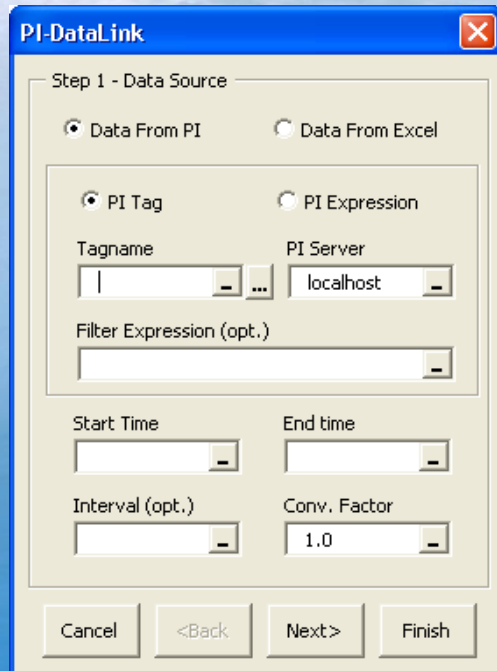

- Data flow is as follows:

Examples of New Complex Queries

- What is the average flow rate of flow1 while pumpA in “Auto” state?
- What is the time weighted total of the sum of flow 1 and flow 2?
- How many times was flow1 below 100 gal/min?

The New Advanced Calculated Data

PI-DataLink

Step 1 - Data Source

☒ Data From PI ☐ Data From Excel

☒ PI Tag ☐ PI Expression

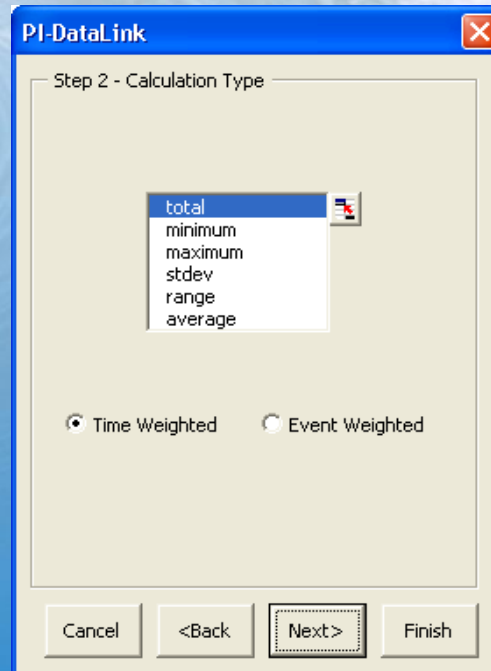

Tagname: PI Server:

Filter Expression (opt.):

Start Time: End time:

Interval (opt.): Conv. Factor:

Cancel <Back Next> Finish

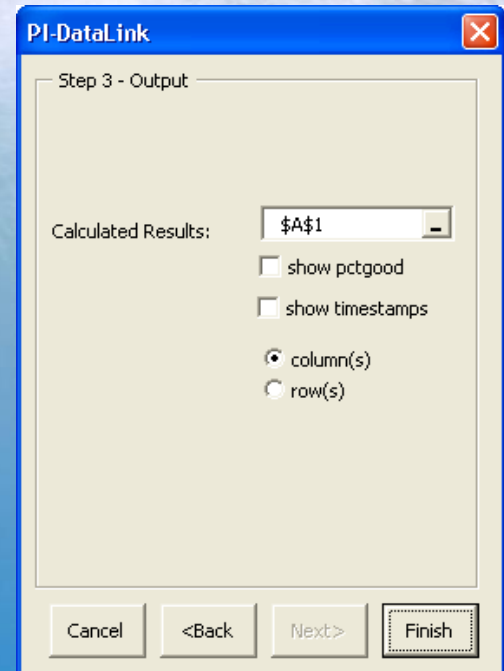

PI-DataLink

Step 2 - Calculation Type

☒ Time Weighted ☐ Event Weighted

total
minimum
maximum
stdev
range
average

Cancel <Back Next> Finish

PI-DataLink

Step 3 - Output

Calculated Results:

☐ show pctgood
☐ show timestamps

☒ column(s)
☐ row(s)

Cancel <Back Next> Finish
