Deschutes Brewery – History

- Located in Bend, OR
- Founded in 1988
- Pub opened in Portland, OR in 2007

Deschutes Brewery – Production Facility

- 2 brewhouses
- 50+ vessels
- Bottling and kegging
- 7th largest craft brewer in the US

Constantly Improving Quality and Efficiency

Our Successes So Far: Highlights from SF 2016

Leveraging the PI System to Assure Beer Quality and Production Capacity

COMPANY and GOAL
Deschutes Brewery is the 7th largest craft brewery in US, and wanted to **maximize its current infrastructure** to support strategic initiatives

CHALLENGE
New class of fermenters were displaying uncharacteristic cooling behavior reducing capacity potential
• Potential quality off flavors were also a concern

SOLUTION
Fermentation data from their DCS connected to the PI System for analysis
• PI Asset Framework (AF), Event Frames and PI Coresight enabled the brewing team to quickly and efficiently implement a solution to correct this uncharacteristic behavior in their fermentations

RESULTS
Consistent and repeatable fermentation cooling with a time savings of 60% vs. the worst cases exhibited
• Able to maximize existing capacity
• Avoid unnecessary ≈ 8 million dollar capital investment to expand fermentation capacity
• Assuring the highest quality in their products

OSisoft. USERS CONFERENCE 2016

RESULTS

Consistent and repeatable fermentation cooling with a time savings of 60% vs. the worst cases exhibited

- Able to maximize existing capacity
- Avoid unnecessary ≈ 8 million dollar capital investment to expand fermentation capacity
- Assuring the highest quality in their products

Diagnosed uncharacteristic behavior in fermenters

- PI Asset Framework
- Event Frames
- PI Coresight

Can we use any of these buzz words?

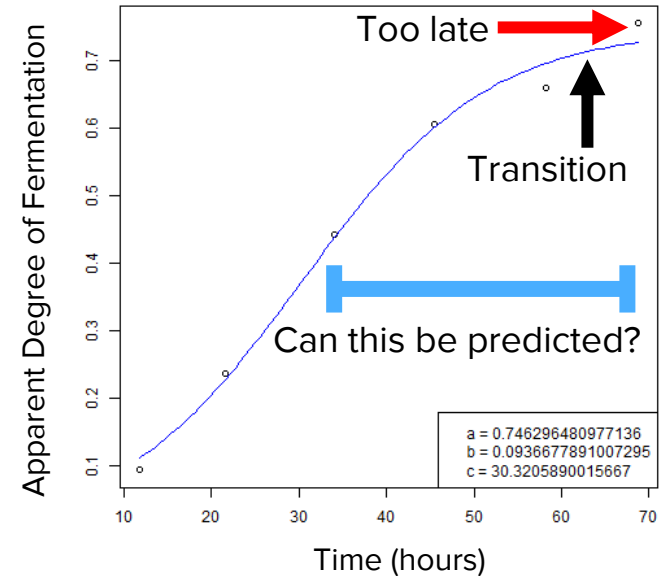

Need to Predict Transition from Fermentation to Free Rise

Challenge

Transition occurs between infrequent manual measurements

Need to Predict Transition from Fermentation to Free Rise

Constraints

- One manual density measurement per vessel every 8-10 hours
- Large capital expenditure not an option

Impact

- Up to 72 hours lost in production

Options

- \$750k for inline density meters
- Manually predict transition in spreadsheets

Predictive Analytics in a Spreadsheet

Bring Raw Data In

Clean it Up

New Challenges

- How can the **data preparation** be **automated**?
- How can the **predictions** be **operationalized**?
- How can the **predictions** become **more accurate** over time?

Fit to a Line

Beer Brand Portfolio Complicates Predictability

Variety within Batches for a Brand

Diversity in Beer Brands

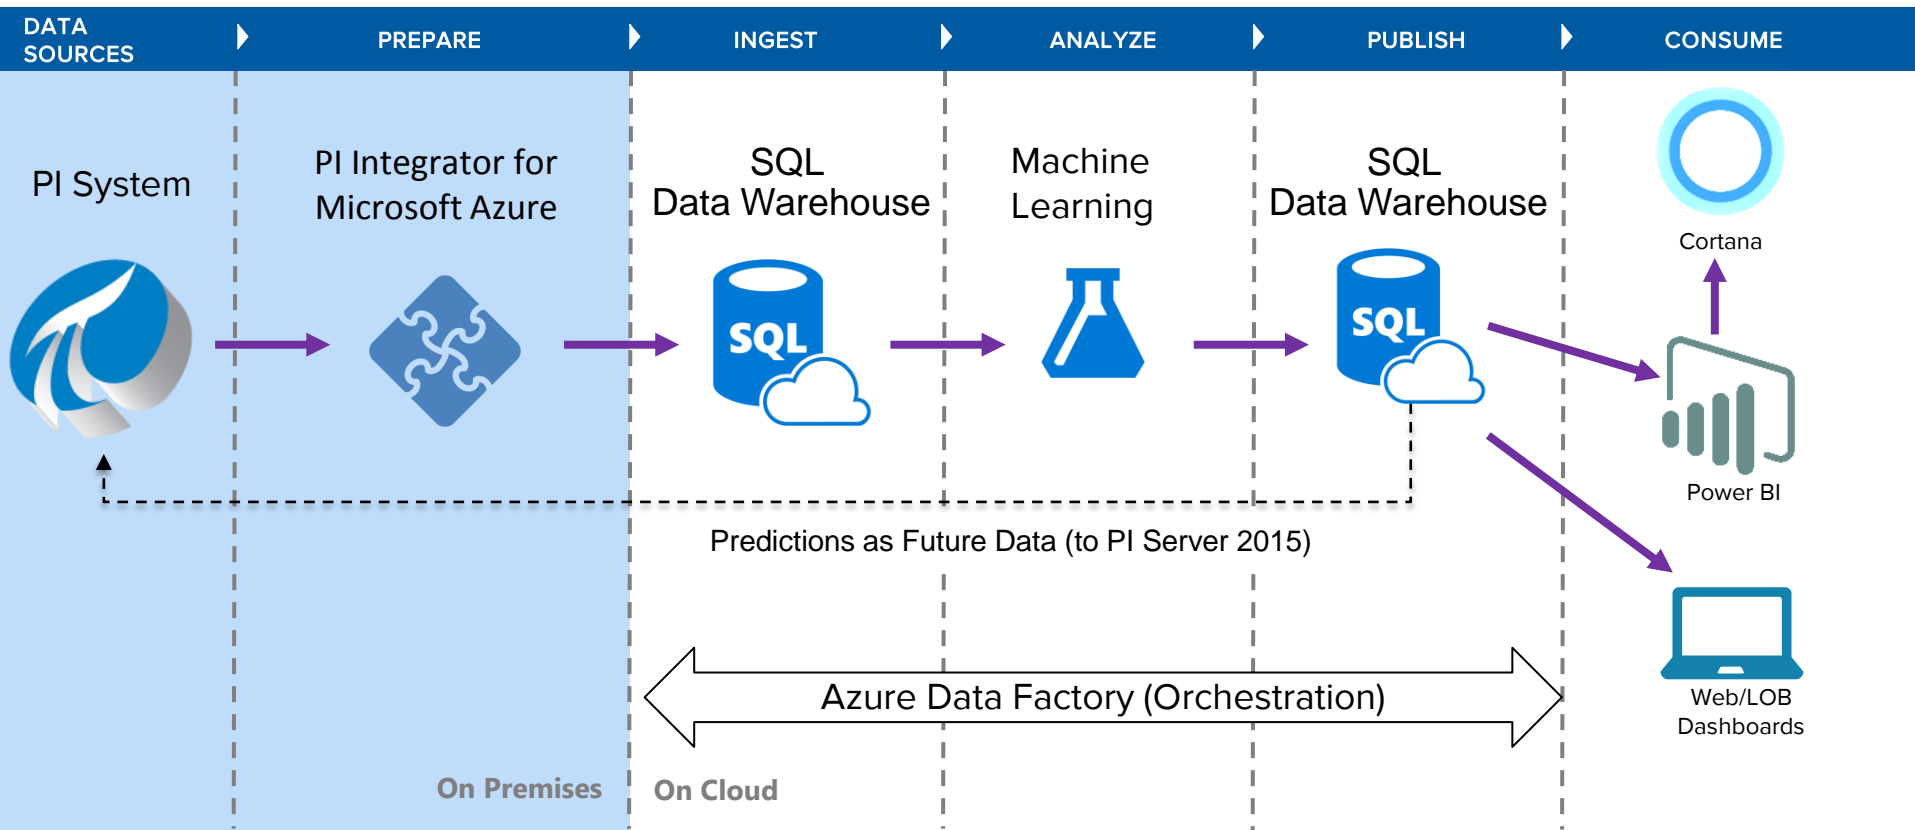

Need to Predict Transition from Fermentation to Free Rise

Challenges

- Transition occurs between manual density measurements
- Each batch of beer requires **data preparation**
- **Predictions** need to be **accurate and operationalized** to enable action
- Batch variety and brand diversity require **predictive model to learn**

How to Operationalize Predictions

Machine Learning Model

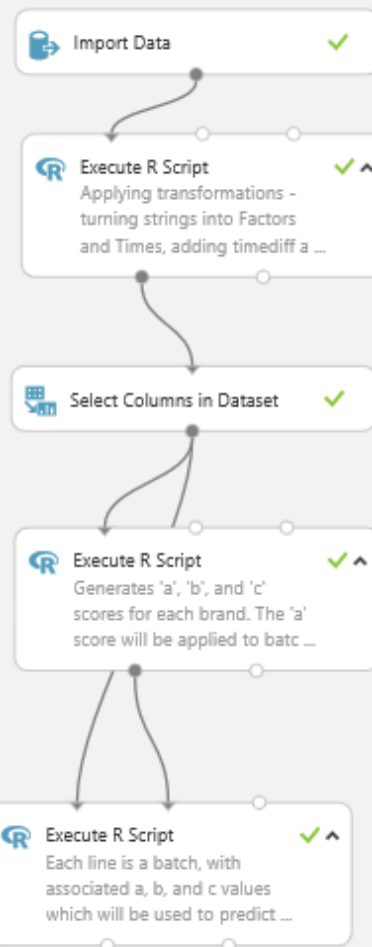

Proposal

Early Density Readings → Transition Time

Hypothesis

Transition time influenced by

- Brand of beer
- Fermentation dynamics (temperatures, pressures,..)
- Vessel's dimensions & volume

Azure ML Predicts Accurate Transition Time

Benchmark: Measure accuracy against a standard (based on historical data)

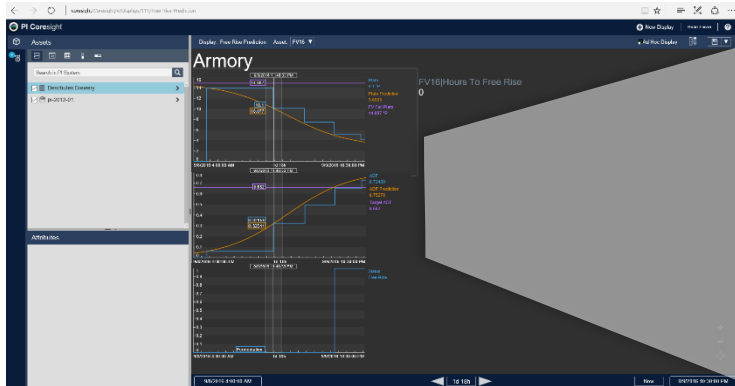

Predict: Use 2 early densities to estimate transition time

Refine: base predictions on brand for greater accuracy

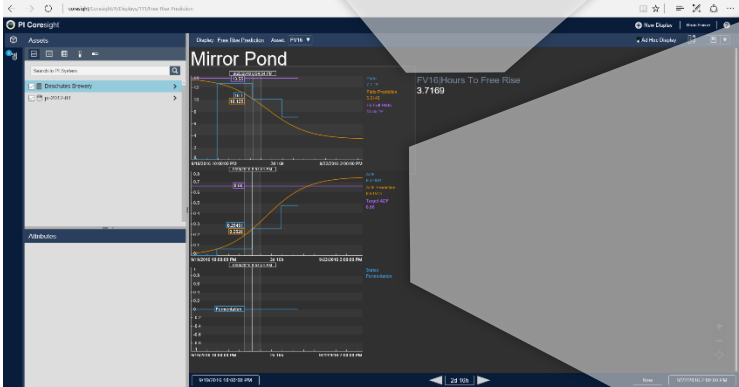

Operationalizing Predictions on When the Transition Occurs

Operationalizing Predictions on When the Transition Occurs

FV16|Hours To Free Rise
3.7169

Leveraging the PI System and Cortana Intelligence to Increase Process Efficiency

COMPANY and GOAL

Deschutes Brewery is the 7th largest craft brewery in US, and wanted to maximize production with its existing infrastructure to fund construction of a 2nd brewery in Roanoke, VA

CHALLENGE

Batch's phase transition happens between manual density measurements occurring every 8-10 hours

- Impact: Losing up to 72 hours in production time

SOLUTION

Use data science to achieve accurate predictive analytics for determining a batch's density measurements

- PI System
- PI Integrator for Microsoft Azure
- SQL Data Warehouse
- Azure Machine Learning
- Azure Data Factory

RESULTS

Ability to eliminate production time losses and increase production capacity

- Accurate predictions of when a batch's phase transitions from fermentation to free rise

Future Opportunities

- Incorporate predictions into beer making process
- Roll out predictions for more beer brands
- Test if predictions can cue a batch that is deviating
- Apply similar predictive methods to other transitions
