Agenda

- About us
- The Problem
- The Solution and Evolution
- Screenshots
- Next Steps
- Summary

About us

- Company: Janssen Pharmaceuticals
- Location: Gurabo, Puerto Rico
- Industry: Pharmaceutical manufacturing
 - Solids (Immediate Release, Extended Release)
 - Parenteral
- Size: 540,000 sq ft.
- Operations: 7x24

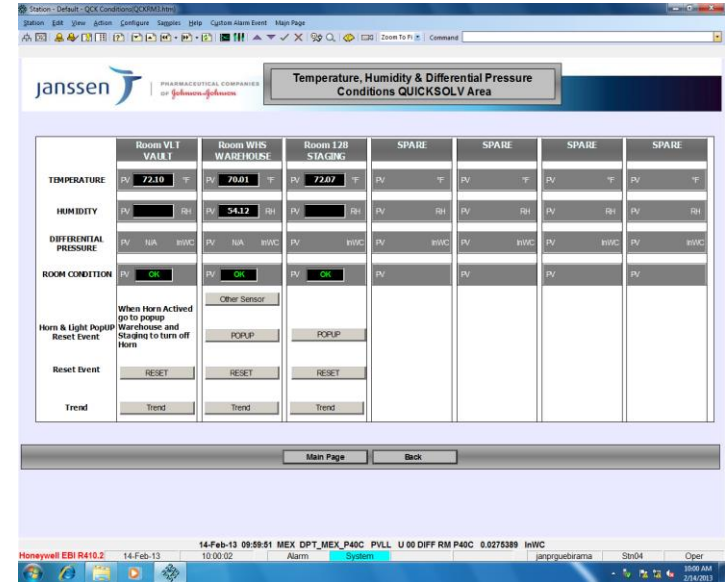

Problem

- Critical manufacturing rooms depend on chart recorders to monitor temperature and humidity
- Unable to monitor in real-time
- Not easy to read, subject to interpretation
- Require calibration every 3 months
- Unable to generate reports
- People dependent for reading and chart setup
- No visibility outside the manufacturing room
- Regulatory agencies required dynamic monitoring of environmental conditions

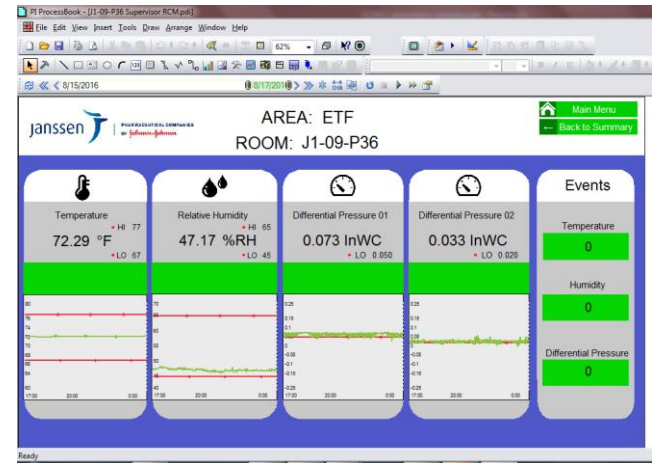

Solution – Part 1

- Implement Honeywell Enterprise Buildings Integrator (EBI), replace chart recorders with sensors and store data in EBI
- **Pros**
 - Data stored on electronic form
 - Eliminates chart recorders
 - Less margin for readings errors
- **Cons**
 - Data stored for just 30 days
 - Limited visualization capabilities
 - Expensive license cost for clients
 - Visible only from isolated network

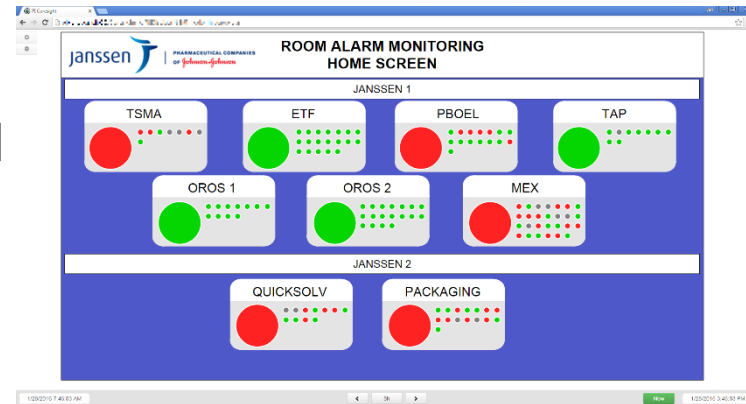

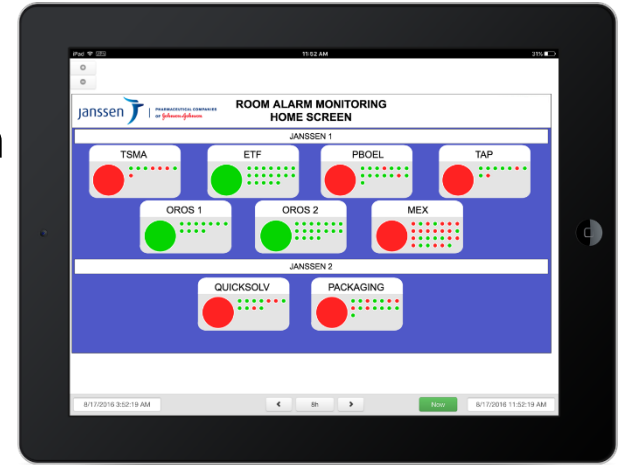

Solution – Part 2

- Integrate EBI to PI Server, develop visualization using PI ProcessBook and deploy visualization to 200+ desktops
- **Pros**
 - Increase retention of data (virtually unlimited)
 - Expand the visualization possibilities
 - Zero license cost (EA customer)
 - Visibility from any desktop
 - GMP compliant reports
- **Cons**
 - Visualization difficult to maintain
 - Not compatible with mobile devices

Solution – The Evolution

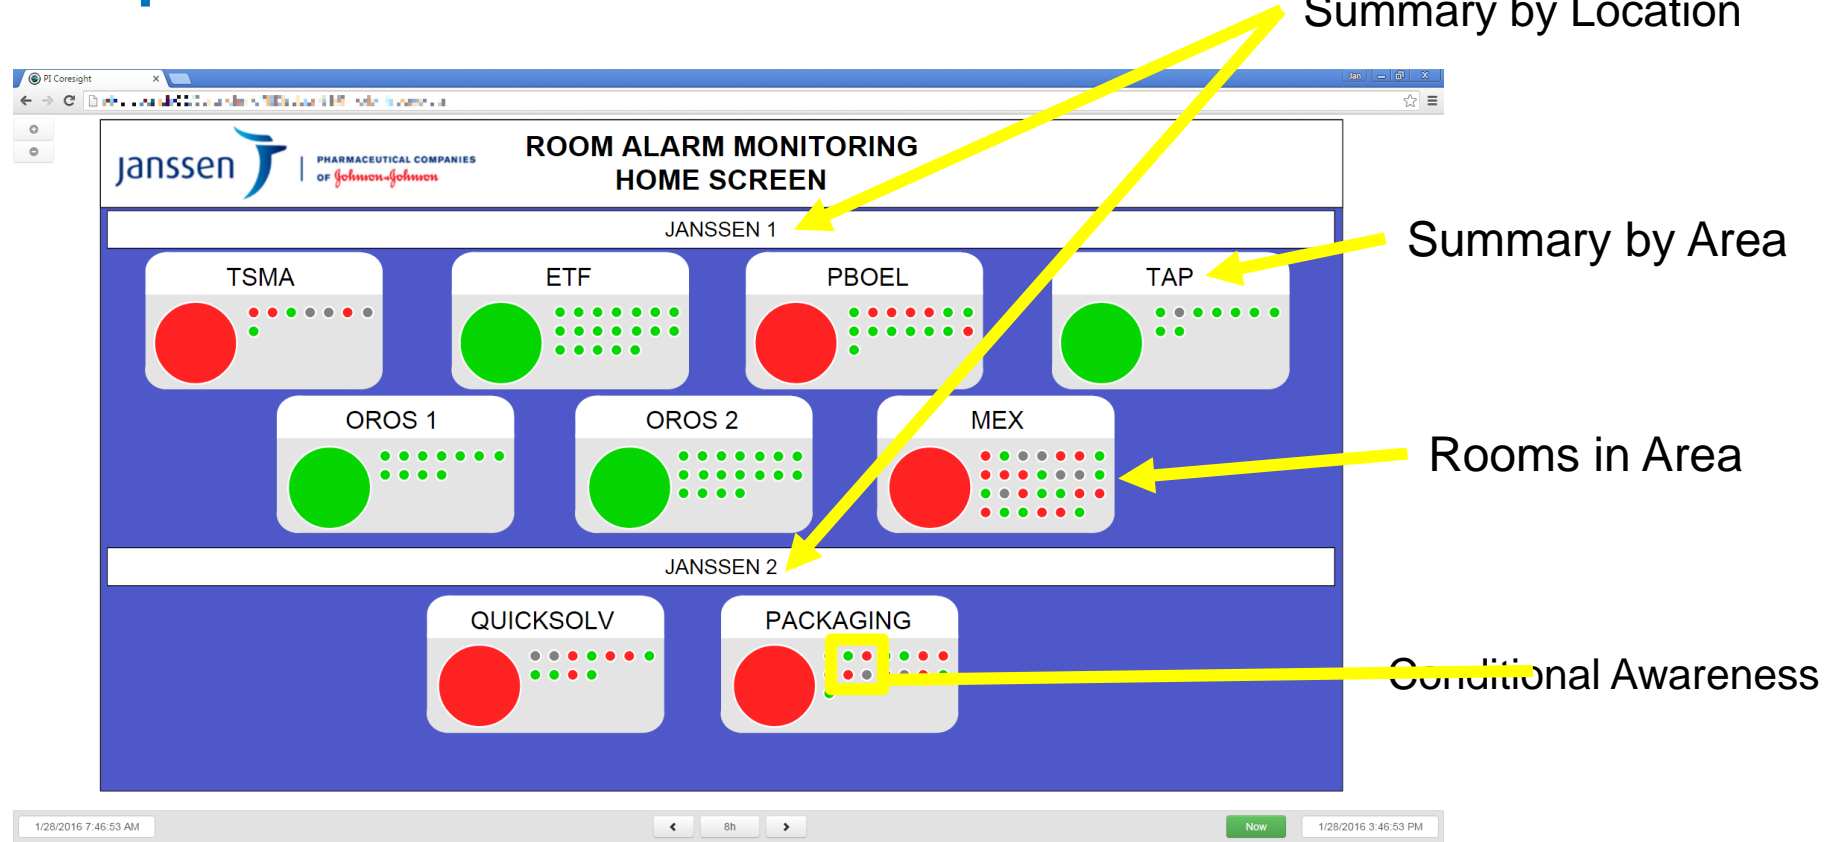

- Deploy PI Coresight and migrate visualization to web environment
- **Pros**
 - Visualization easy to migrate, maintain and deploy
 - Fully compatible with mobile devices
 - Enhanced experience for the users
 - Very fast performance
 - Monitoring center reduced unplanned downtime to <1%
- **Cons**
 - PI Coresight server dependency

Additional benefits

- Significant improvement of batch review process and investigations
- Extremely positive adoption from users
- Reduction in down time due to conditions
- Reduction of investigations due to unplanned downtimes
- Increased response from facilities team
- Visualization leverage globally (Johnson & Johnson SPIRIT Program)

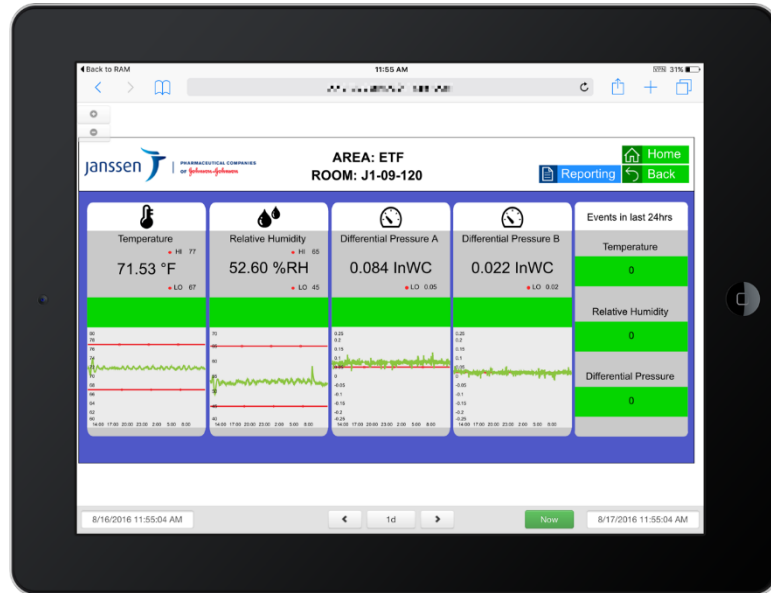

Sample Screens – Home Screen

Additional Screens – Area Summary

Additional Screens – Room Details and History

Next Steps

- Integration with MES for room parameters verification prior to start manufacturing process
- Addition of 73 rooms, currently 132 rooms already
- Define alerts using PI Notifications
- Combine Event Frames with room environmental conditions for batch review and release
- Upgrade to PI Coresight 2016

Real Time Environmental Condition Monitoring using PI Coresight

COMPANY and GOAL

Janssen wanted to have **real-time** monitoring, **easy to read** visualization and reports for the environmental conditions of manufacturing rooms.

CHALLENGE

Obsolete chart recorders prevented easy access to data in real time

- Difficult to read
- People dependent
- No real-time monitoring
- No reports
- No visualization

SOLUTION

Removing chart recorders, collecting the data into PI Server and creation of easy to read user-friendly visualization in PI Coresight

- Chart recorders replaced with modern sensors
- Visualization prepared in PI Process Book and migrated to PI Coresight

RESULTS

Data can now be accessed by operators, utilities and management from any location and any device

- Reduced unplanned down time to <1%
- Repurpose utility personnel by creation of a monitoring center
- Reduced number of events related to environmental conditions
