

Heat Exchanger Workshop

Enterprise use of PI System

INTERNATIONAL PAPER

- We are one of the world's leading producers of fiber-based packaging, pulp, and paper
 - 55,000 employees
 - \$21 Billion in revenue
 - Operations in 24 countries
 - Periodic mergers and acquisitions
- PI Systems
 - 35 sites in 7 countries
 - Distributed systems and application support
 - Limited centralized consolidated PI System
 - Process Historian standard since 1997 (some sites longer)

The challenge

- New OSIsoft Enterprise Agreement
 - Return on investment
 - Subject matter expert involvement
 - PI Asset Framework capabilities
 - Priority re-adjustment
- PI System Administration
 - Part time assignment
 - PI Asset Framework capabilities
 - PI Asset Framework configuration training

Why Heat Exchangers?

- Heat Exchangers
 - Simple machine – no moving parts
 - Known value of energy losses and maintenance costs
- Years between energy audits
- Efficiency calculations
 - Different approaches
 - Mostly done manually
- OSIssoft has a model

A simple tube in shell heat exchanger

Image: Public Domain. KoenB, creator, April 7 2007.

What is a Heat Exchanger?

- Device to Transfer Heat Between Fluids w/o Mixing
- Shell & Tube
 - Tube Bundle Surrounded by Large Pressure Vessel
 - Counter-Current Flow

Heat exchanger cross section

OSIsoft Heat-Exchanger-2016-Tutorial-EN.PDF

OSIsoft Heat Exchanger Model

- Built in PI Asset Framework
 - Element
 - Unit of Measure
 - Event Frames
 - Template
- Visualization Tools
 - PI Vision
 - DataLink
- Training
 - Tutorial
 - Instructors

International Paper Heat Exchanger Model

- Enhanced OSIsoft model
 - Handle missing data
 - Additional error checking
- Support materials
 - Spreadsheets
 - Configuration information
 - Verify calculations
 - PI Vision Asset based displays
- Distribution package
 - PI Builder spreadsheets for templates
 - PI Vision Display Utility
 - Installation steps

General	Child Elements	Attributes	Ports	Analyses	Notification Rules	Versio
Name						Backfilling
✓	✓	f(x)		HEX-01: Calculate Hourly Values	✓	
✓	✓	f(x)		HEX-02: Calculate Filtered Values	✓	
✓	✓	H		HEX-03: Generate Events	✓	

Revised July 27, 2017

Plant Model Information				
Attribute	SME Input	Value	Unit of Measure	Description
Element Name				Long Unit Name for Reports & also the name used to search
Plant Model Path				Defines Where the Heat Exchanger is Placed in the Facility's Asset

Heat Exchanger Measurements				
Attribute	PI Server	PI Tag	UOM	Description
SS-Flow Rate			gpm	Shell Side Flow Rate PI Tag
SS-Temp-In			F	Shell Side Inlet Temperature
SS-Temp-Out			F	Shell Side Output Temperature
TS-Flow Rate			gpm	Tube Side Flow Rate PI Tag
TS-Temp-In			F	Tube Side Inlet Temperature
TS-Temp-Out			F	Tube Side Output Temperature

Heat Exchanger Properties				
Attribute	Default	Value	Unit of Measure	Description
Area	200		ft ²	HEX Area
Days-Filter	1		Day	Filter Days for Notifications &
Element Name	UNDEF			Long Unit Name for Reports & also the name used to search

Why a Workshop?

- PI Asset Framework Task Force
 - Small team of PI System Administrators
 - Discussing and supporting PI Asset Framework configurations for months
 - Training
 - No systematic approach
 - Learn on the job/Self study
- Focusing Event
 - Bring Team together
 - Concentrate on one topic
- Customizable
 - Modified the standard Heat Exchanger Tutorial
 - Deployment Engineering

The Workshop

- Prerequisite training – list of YouTube videos to be watched
- Face to face meeting
- International Paper discussions
 - Software development processes
 - Challenges with deploying PI System objects
 - Request driven implementation
- Heat Exchanger Tutorial training (modified)
- International Paper Heat Exchanger training
- Deployment Engineering Collaboration
 - OSIsoft COE
 - Pros and Cons of different approaches

What we learned about Workshops

- Workshops are a hidden gem of the Enterprise Agreement
 - Customizable
 - Multiple resources can be joined together
 - Training
 - Service Voucher cover the entire engagement
- Successful workshops take significant planning (and snacks)

What we learned about the products

- PI Asset Framework is not designed for a multi-environment or a distributed approach
 - Every object has a unique ID in every environment
 - Minimal migration tools (PI Builder or XML export/import)
 - Need to understand which errors to ignore
 - Still working on how to edit deployed objects
 - Works best with a dedicated development team which defeats some of the power of the products
 - Works best with a top down design
- PI Vision displays can be migrated
 - Element names and hierarchy matter
 - A migrated display has to have all the attributes replaced

Where are we now?

- Centralized Configuration
- Distributed Deployment
- 4 standard Heat Exchanger models deployed in 3 sites
- 3 models in the pipeline at three additional sites
- 17 heat exchanger prospects
- Internal marketing of capability underway
- Too early to tell if energy costs have been reduced

Summary

COMPANY and GOAL

INTERNATIONAL  PAPER

Utilize a standard model to save energy by monitoring for heat exchanger fouling

CHALLENGE

Using our investment in OSIsoft with minimal subject matter expert input

- Part Time staff
- Geography

SOLUTION

Start with a simple machine with significant operational impact

- Heat Exchanger Fouling Monitoring
- Known energy costs
- Utilize a OSIsoft Workshop to jump start the effort

RESULTS

First deployments 6 months after the development of the initial model

- Overcame startup issues
- Significant training
