

IloT Data Access with the PI System

Daniel McGovern
November 8th, 2017

PI System Data is Used Across the Enterprise to Achieve Business Impacting Change

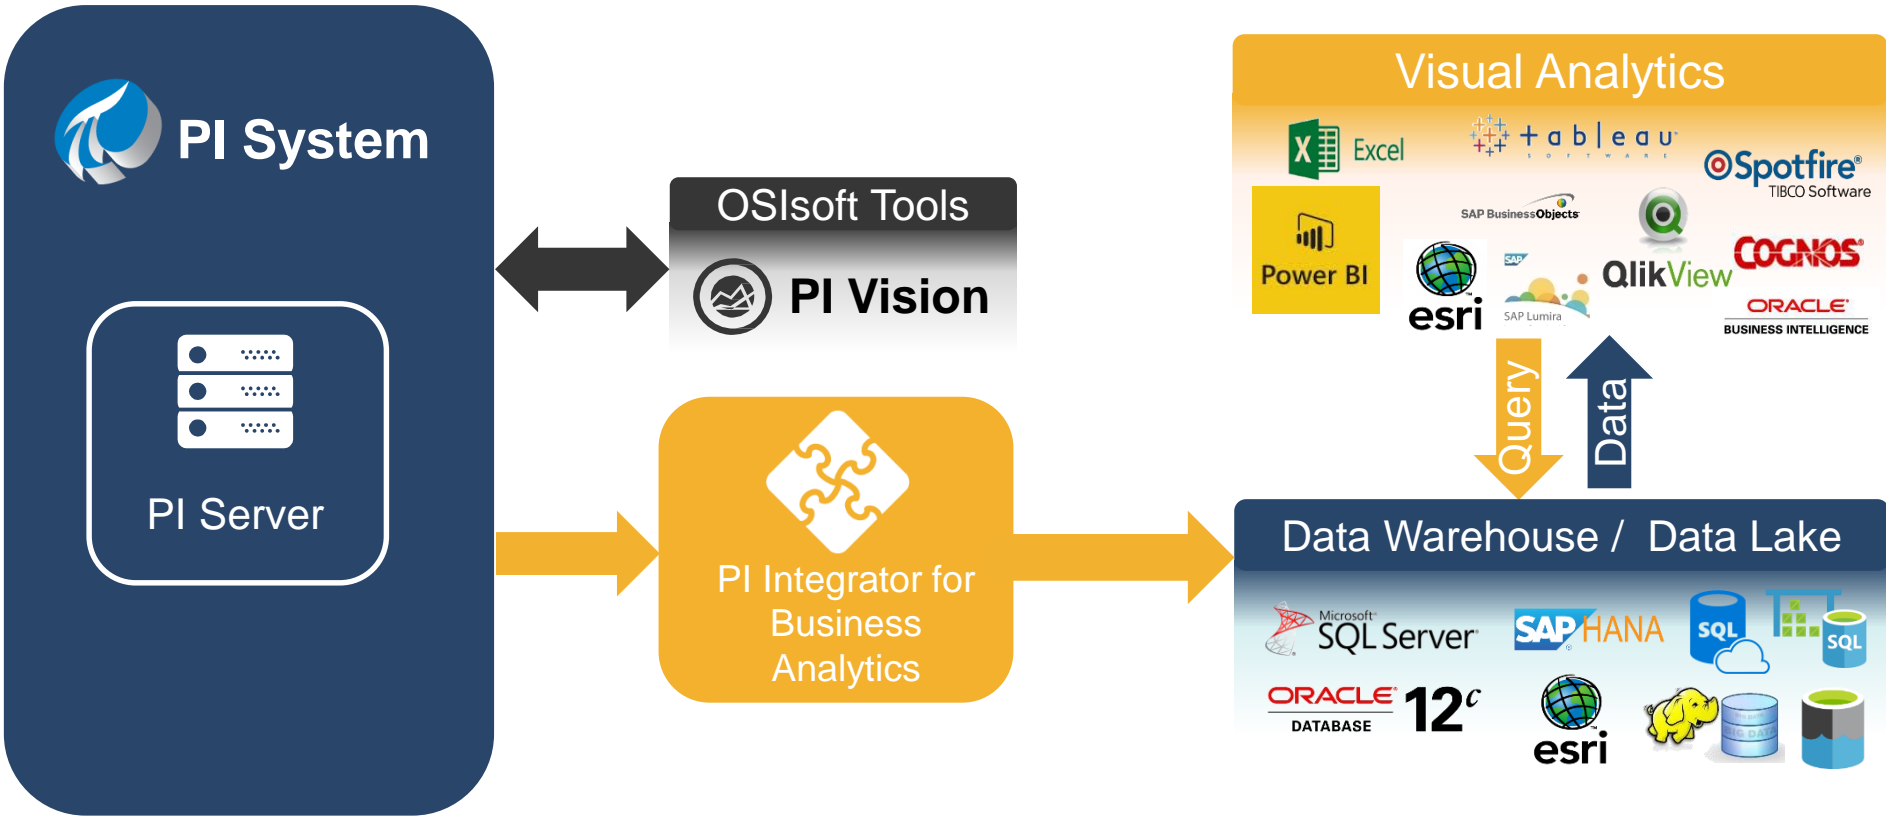

**The greatest value of a picture is when
it forces us to notice what we never
expected to see.**

- John Tukey

Streaming Data to the Right Places

Utilizing PI System Data

PI Vision

Unified visualization infrastructure,
your window into operational
intelligence

PI Integrators

Blend operational data with
business data for complex
analyses

PI Vision

We are embarking on a **unified visualization infrastructure** to deliver a seamless, powerful, extensible experience

Your window into operational intelligence

A Single Platform for Your Visualization Needs

Assets

Events

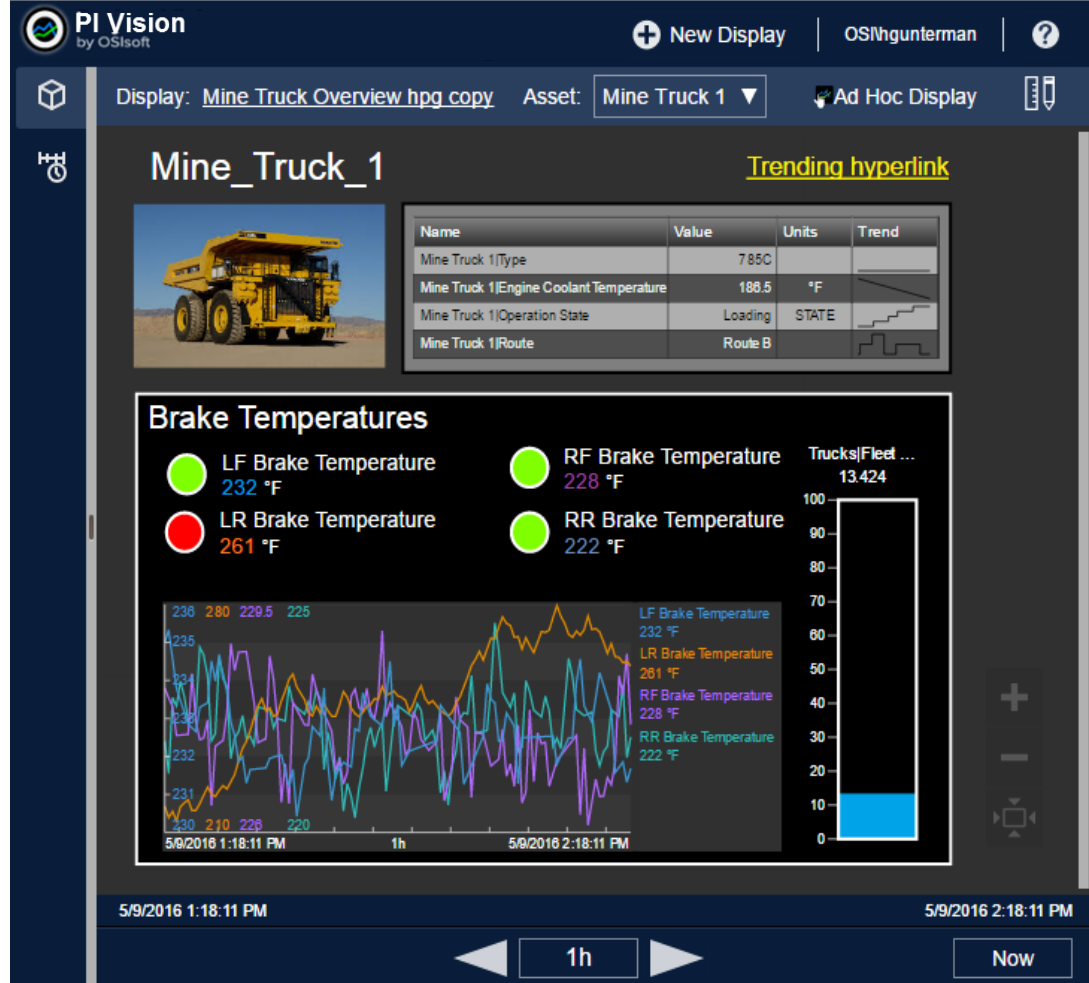

Analytics

Notifications

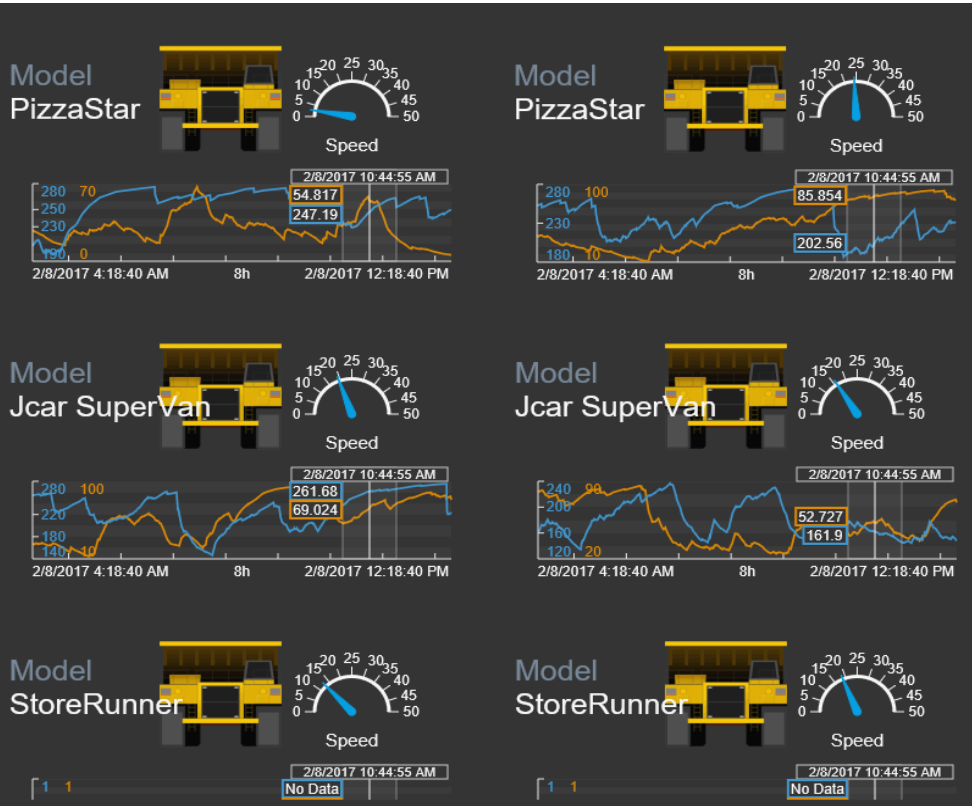

What is PI Vision?

The fastest, easiest way to visualize PI System data

- Access data from any web browser, including **mobile** device browsers
- Collaborate and **share** comments across the company
- Deploy and **roll-out** rapidly

Auto-populate Monitoring Displays with Collections

Group one or more symbols as a “collection”

Screen auto-populates that same grouping for **all assets**

- New assets are added **automatically**
- Add **filter criteria** to quickly see troubled assets

Pinned Events

- Identify batch process deviation by comparing to a reference
 - “Pin” one or more events, to be used as a reference
 - Pinned events are saved with the display

The screenshot displays a mobile application interface titled "Events". At the top, there is a toggle switch for "Automatically refresh the list" which is checked. Below this, a section labeled "Pinned" contains two event entries, each with a yellow diamond icon and a right-pointing arrow. The first event is "OSIssoft_201581181621 (CLEANING)" with a timestamp of "8/11/2015 4:16:21 AM - 8/11/2015 6:46:49 AM". The second event is "OSIssoft_201585185135 (CLEANING)".

Below the pinned events is a "Search Results" section. The first result is "OSIssoft_201581202655 (CLEANING)" with a timestamp of "8/11/2015 8:26:55". A context menu is open over this event, listing several actions: "Hide Event", "Event Details", "Compare Similar Events by Name", "Compare Similar Events by Type", and "Pin Event". The "Pin Event" option is highlighted in blue. Other search results include "OSIssoft_20158...", "OSIssoft_20158...", "OSIssoft_20158...", "OSIssoft_201584104839 (CLEANING)", and "OSIssoft_201584103941 (CLEANING)".

At the bottom right of the interface, there is a link labeled "Edit Search Criteria".

Graphics Library

- Easily create **standard views** by using an extensive library of graphics symbols
- Use the same symbols as are available from PI ProcessBook

PI Vision 2017

Drill-in Navigation

High Engine Temperature	1/26/2017 8:57:13 AM	Acknowledge

Asset Comparison Table

Asset	Manufacturer	Driver	Engine RPM	Load	Status
Mine Truck 1	Caterpillar	Jason Rice	0	0	Running
Mine Truck 2	Volvo	Tommy TooFast	0	0	Running
Mine Truck 3	Komatsu	Edna Thompson	1,682.6	159.87	Running
Mine Truck 4	Caterpillar	Reville Swivel	0	0	Running
Mine Truck 5	Volvo	John Sintias	0	0	Running
Mine Truck 6	Komatsu	Steve Kwan	1,744.9	194.14	Running
Mine Truck 7	Volvo	Brian Bostwick	0	0	Running
Mine Truck 8	Caterpillar	Steve Kia	0	0	Running
Mine Truck 9	Caterpillar	Justin Brown	0	0	Running
Mine Truck 10	Volvo	Bob Bonkers	1,719.7	157.74	Running

XY Plot

PI Integrators: Blending data to ask complex questions

PI System Users Need to Solve a Variety of Complex Questions

Disparate assets or one-by-one interactions

Interacting with common assets as a fleet

System Optimization

Benchmarking

Process Optimization

Monitoring

Real-time visibility

- HMI

Real-time & historical views across any plant asset

- PI Vision
- PI Datalink

Fleet-wide performance comparisons

- BI Apps (i.e. Tableau, Spotfire, Lumira)
- PI Integrator for Business Analytics
- SAP HANA IoT Integrator by OSIsoft

Large scale multi-variate analysis

- Machine Learning (Azure ML, R)
- PI Integrator for Business Analytics
- SAP HANA IoT Integrator by OSIsoft

Complexity

Data Integration can Address Big Questions

Mining

- What material is being hauled?
- Was it raining?
- Were there holes in the road?
- What is the grade of the hill?
- Was there scheduled downtime?
- Are there different driving behaviors?

Oil & Gas

- When did the geology change?
- Which well was being drilled?
- What angle was the drill bit?
- Is production related to drill conditions?

Wind Power

- Was wind gusty or steady?
- Was the maintenance planned?
- How long does this issue usually take to fix?

Pharmaceuticals

- What product is being made?
- When is the equipment empty?
- Where was the instrument when I took that measurement?

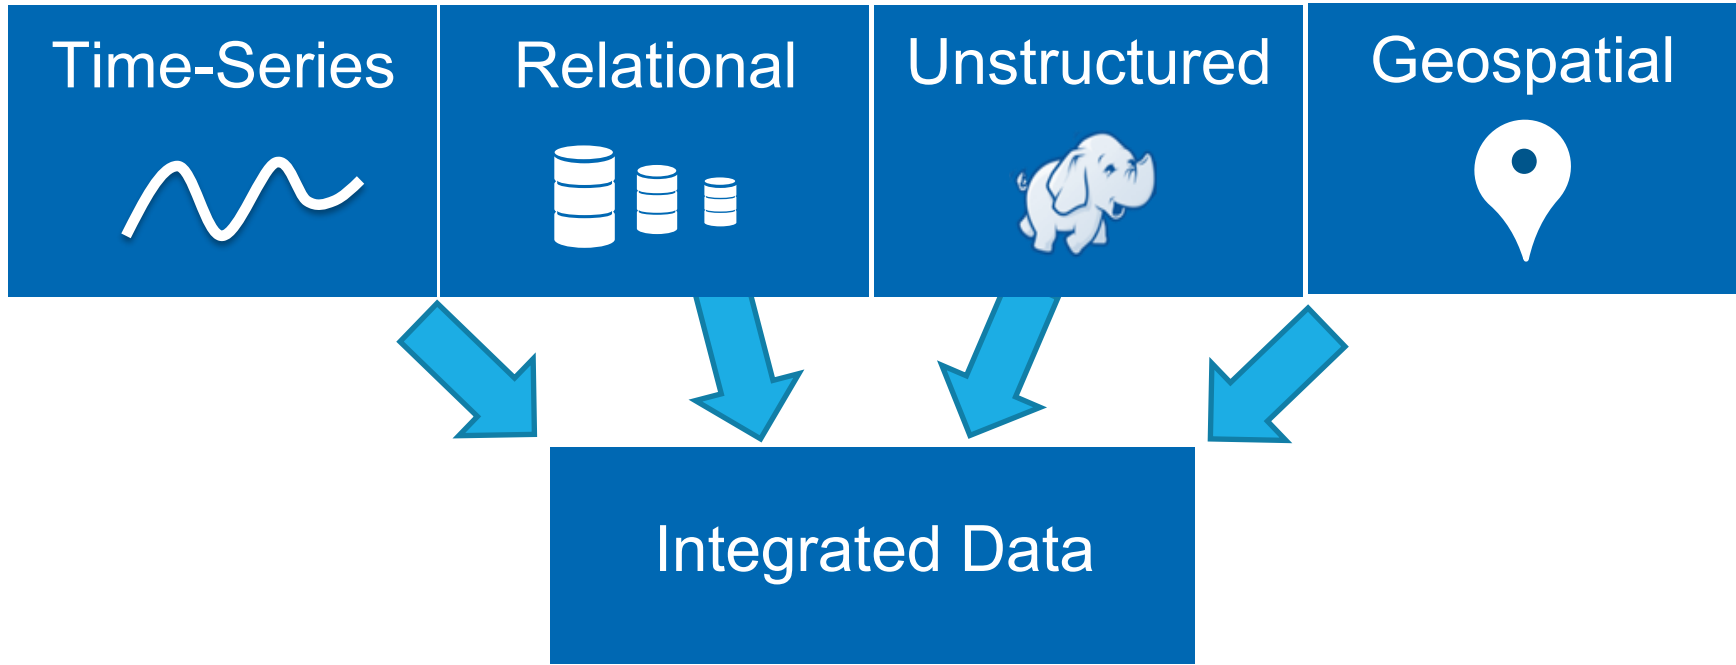

Transmission & Dist.

- How are renewables impacting equipment?
- Was there a voltage violation?
- What are the changes in weather?

Data Integration Brings Together Different Data

Integrate, verb: combine (one thing) with another so that they become a whole

Time-Series Data is Complex!

Turbine 1

Speed
Bearing Temp
Oil Temp

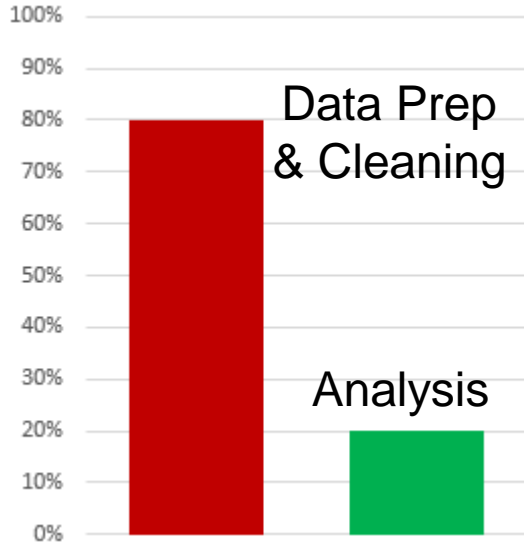

Turbine 2

Speed
Bearing Temp
Oil Temp
Wear Factor

Data Integration Projects are Challenging

Time

Warning: Currently, data analysts spend 50-80% of their time merely collecting and preparing data¹

Expense

Warning: data integration often requires ongoing upkeep

Risk

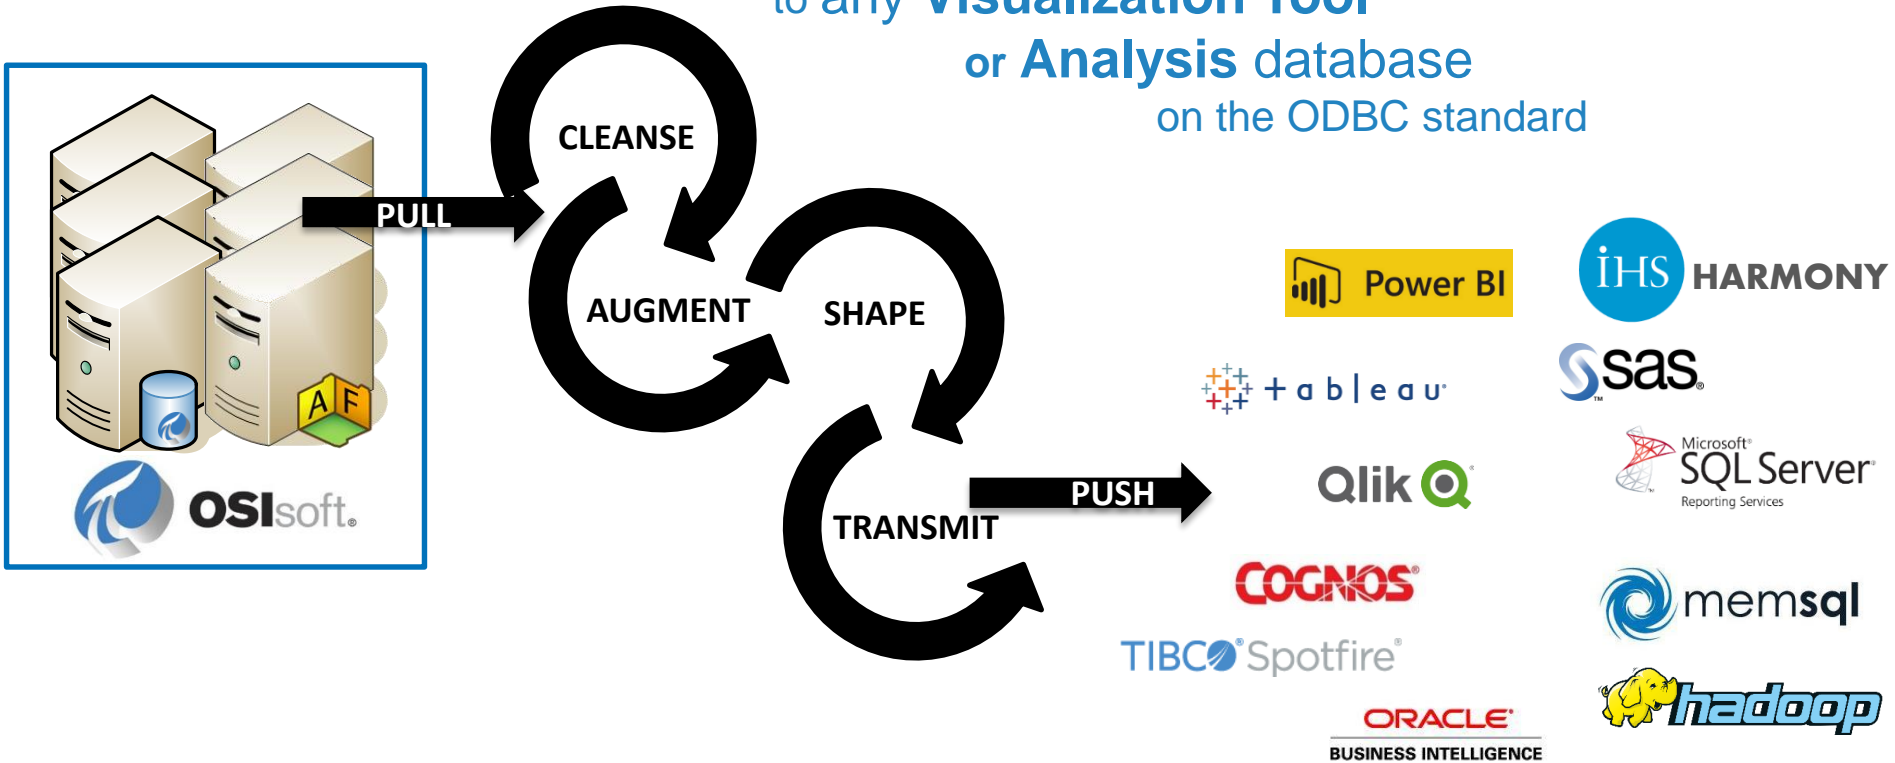

Warning: If “why?” for the project is not clearly communicated, business barriers will delay and risk the project

Prepare and Deliver Process Data

to any **Visualization Tool**
or **Analysis database**
on the ODBC standard

Advanced Integrations: Supported Systems

Visual Analytics

Data Warehouse / Data Lake

Streaming Analytics – 2017

What Can This Look Like?

Example application:
Comparing data from
smart badge sensors

Badges worn by
individuals track
environmental
conditions in
different areas

Badge data is
streamed in
real-time to an
OSIsoft PI
System

1. Smart badge sensors generate data
2. The PI System collects, manages, and enhances that data
3. **Our goal:** use SAP HANA to detect patterns in the data stored in the PI System

Solution: a PI Integrator can publish data from the PI System into SAP HANA!

2015-2016

2017

Future

Business Intelligence & Data Warehouses

Available Today

PI Integrator for Business Analytics

- Microsoft SQL Server, Oracle
- Hadoop (HDFS/HIVE)

PI Integrator for SAP HANA

Available

Cloud Platforms

- Microsoft Azure
- HANA Cloud Platform (5/2017)

Considered (2018)

More Platforms

- ESRI ArcGIS GeoAnalytics
- AWS Redshift
- Teradata

Streaming Systems

Real-Time GIS

PI Integrator for Esri ArcGIS

- Situational Awareness
- Real-Time Geoprocessing
- Import ESRI features (assets)

Planned (2H 2017)

Stream Systems

- Azure Event Hubs, IoT Hub
- Apache Kafka
- SAP SDS (Available)

Considered (2018)

Stream Systems

- AWS Kinesis

PI Integrator Framework

Planned (Q4 2017)

- Process Scale out
- SSL / HTTPS

Planned (2018)

- All Integrators on common Framework (ESRI)
- Node Scale Out and HA

New Integration Patterns

Research

Enable business process orchestration with PI System data – workflow, asset sync, transaction-like data, MES

Research

IoT Platform Integration with 3rd parties

Research

Enable partners and customers to build applications and interact programmatically using PI Integrator Framework.

Customer Example: Deschutes Brewery

Leveraging the PI System and Cortana Intelligence to Increase Process Efficiency

COMPANY and GOAL

Deschutes Brewery is the 7th largest craft brewery in US, and wanted to maximize production with its existing infrastructure to fund construction of a 2nd brewery in Roanoke, VA

CHALLENGE

Batch's phase transition happens between manual density measurements occurring every 8-10 hours

- Impact: Losing up to 72 hours in production time

SOLUTION

Use data science to achieve accurate predictive analytics for determining a batch's density measurements

- PI System
- PI Integrator for Microsoft Azure
- SQL Data Warehouse
- Azure Machine Learning
- Azure Data Factory

RESULTS

Ability to eliminate production time losses and increase production capacity

- Accurate predictions of when a batch's phase transitions from fermentation to free rise

Detecting Early Deviations and Taking Corrective Action

Black Butte Porter – Vessel 45

Indications:

- Uncharacteristic fermentation

Actions taken:

- Transition to free rise early

Results:

- Production time reduced
- Batch saved
- Quality maintained
