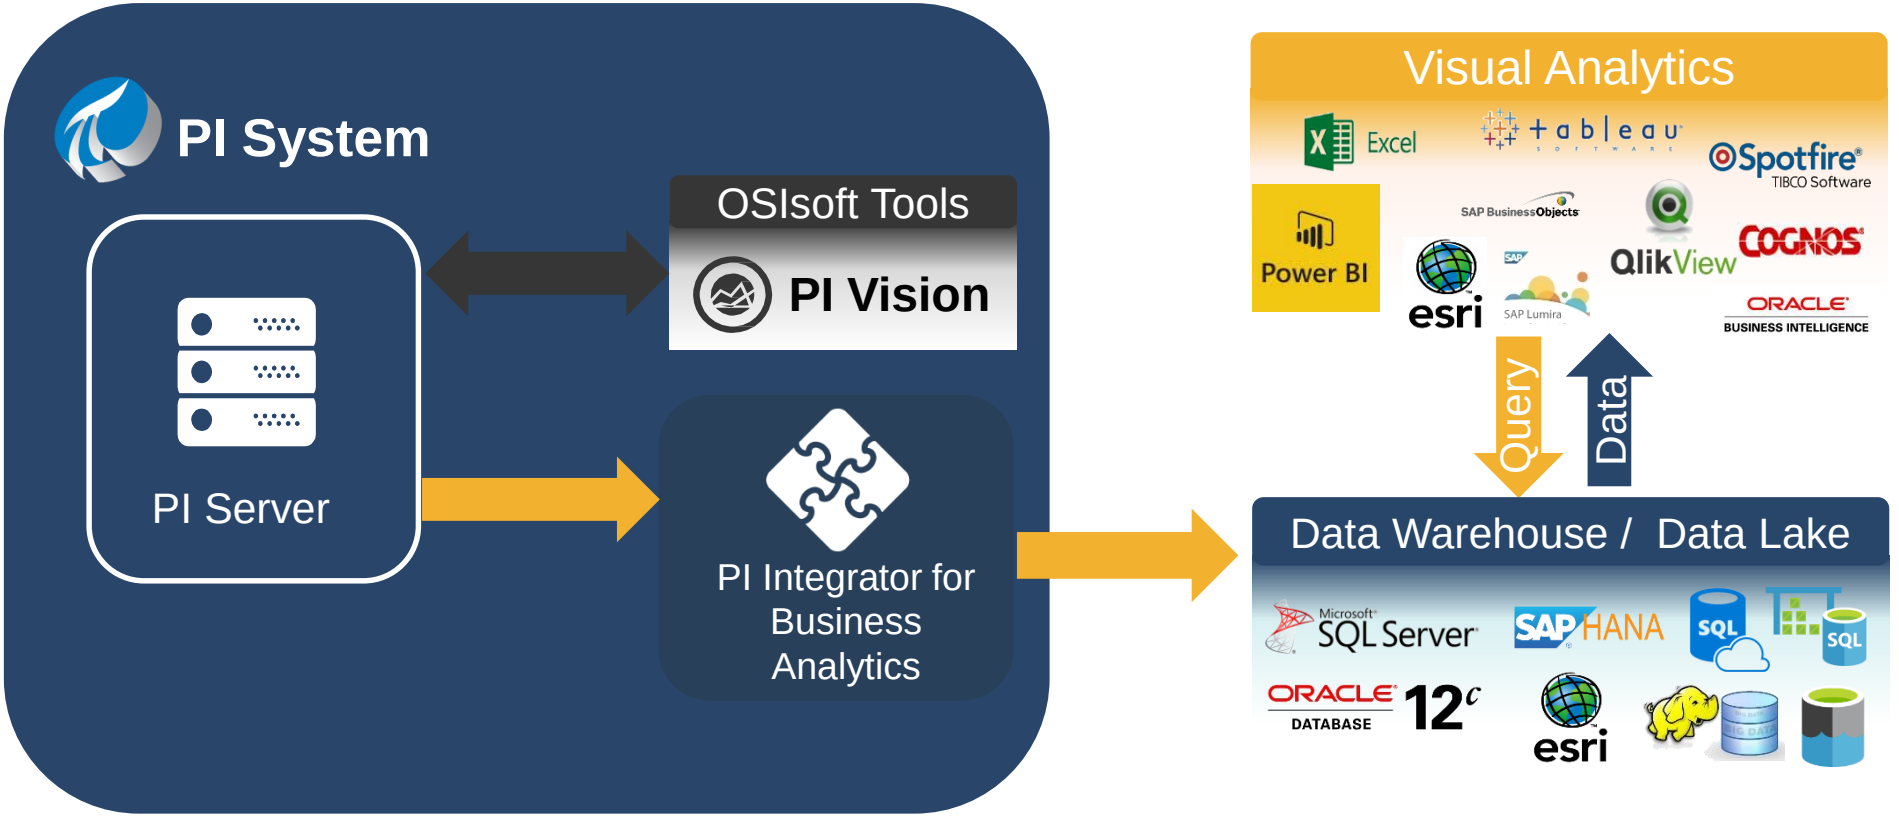
Streaming Data to the Right Places



Utilizing PI System Data

PI Vision

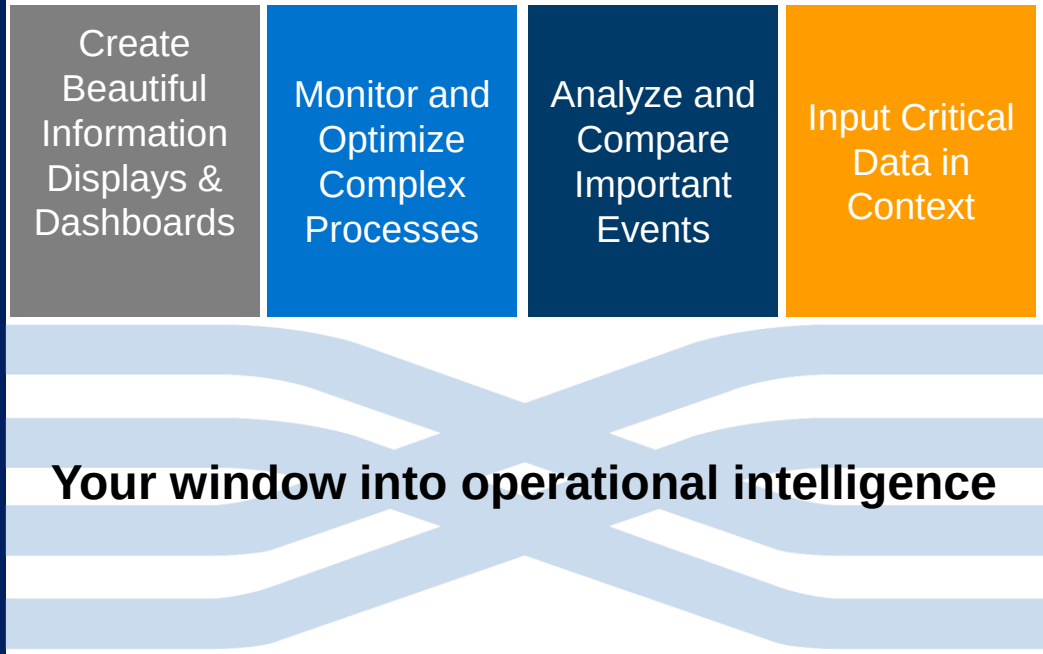
Unified visualization infrastructure, your window into operational intelligence

PI Integrators

Blend operational data with business data for complex analyses

PI Vision

We are embarking on a **unified visualization infrastructure** to deliver a seamless, powerful, extensible experience



A Single Platform for Your Visualization Needs

Today

PI ProcessBook
Display Editor
Process Monitoring

PI Vision
Ad Hoc Analysis
PB Display Viewer

PI WebParts
Dashboards

PI Manual Logger
Manual Data Entry

Tomorrow

A Truly Extensible Visualization Infrastructure

Who benefits from extensions?

OSIsoft Teams

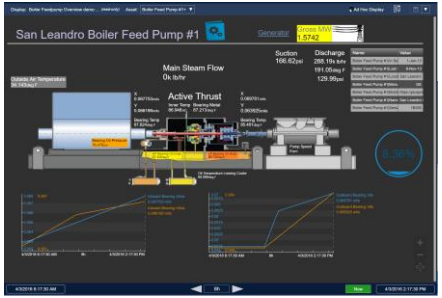
Partner EcoSphere

Partners

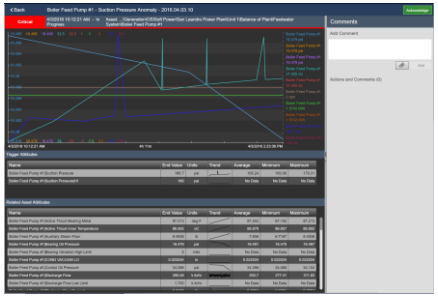
Customers

Modern Visualization for the Modern PI System

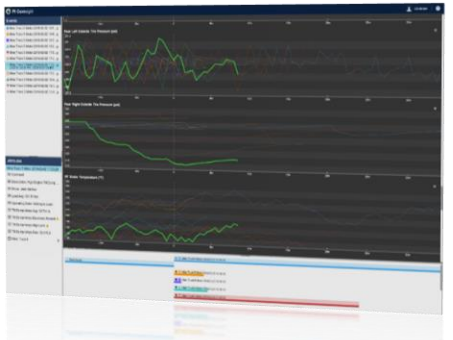
Authoring



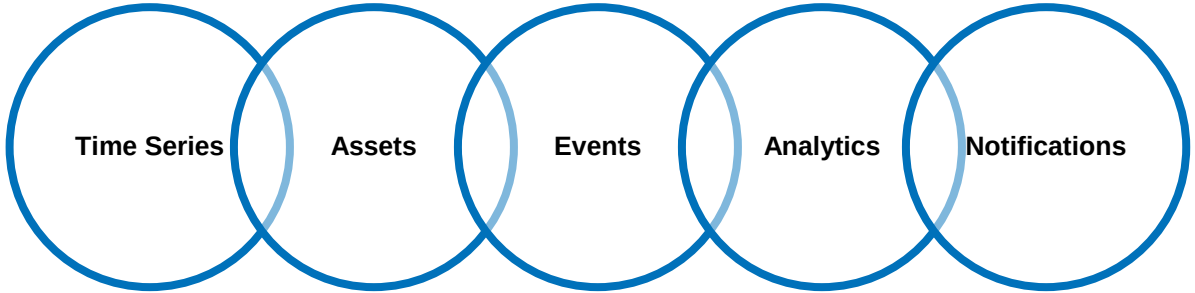
Monitoring



Manual Entry



Ad Hoc Analysis



What is PI Vision?

The fastest, easiest way to visualize PI System data

- Access data from any web browser, including mobile device browsers
- Collaborate and share comments across the company
- Deploy and roll-out rapidly

PI Integrators:
Blending data to ask complex questions

PI System Users Need to Solve a Variety of Complex Questions

Disparate assets or one-by-one interactions

Interacting with common assets as a fleet

Complexity

Monitoring

Real-time visibility

- HMI

Process Optimization

Real-time & historical views across any plant asset

- PI Vision
- PI Datalink

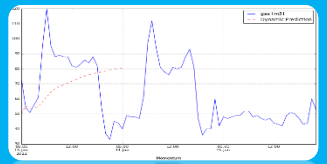
Benchmarking

Fleet-wide performance comparisons

- BI Apps (i.e. Tableau, Spotfire, Lumira)
- PI Integrator for Business Analytics
- SAP HANA IoT Integrator by OSIsoft

System Optimization

Large scale multi-variate analysis



- Machine Learning (Azure ML, R)
- PI Integrator for Business Analytics
- SAP HANA IoT Integrator by OSIsoft

Data Integration can Address Big Questions

Mining

- What material is being hauled?
- Was it raining?
- Were there holes in the road?
- What is the grade of the hill?
- Was there scheduled downtime?
- Are there different driving behaviors?

Oil & Gas

- When did the geology change?
- Which well was being drilled?
- What angle was the drill bit?
- Is production related to drill conditions?

Wind Power

- Was wind gusty or steady?
- Was the maintenance planned?
- How long does this issue usually take to fix?

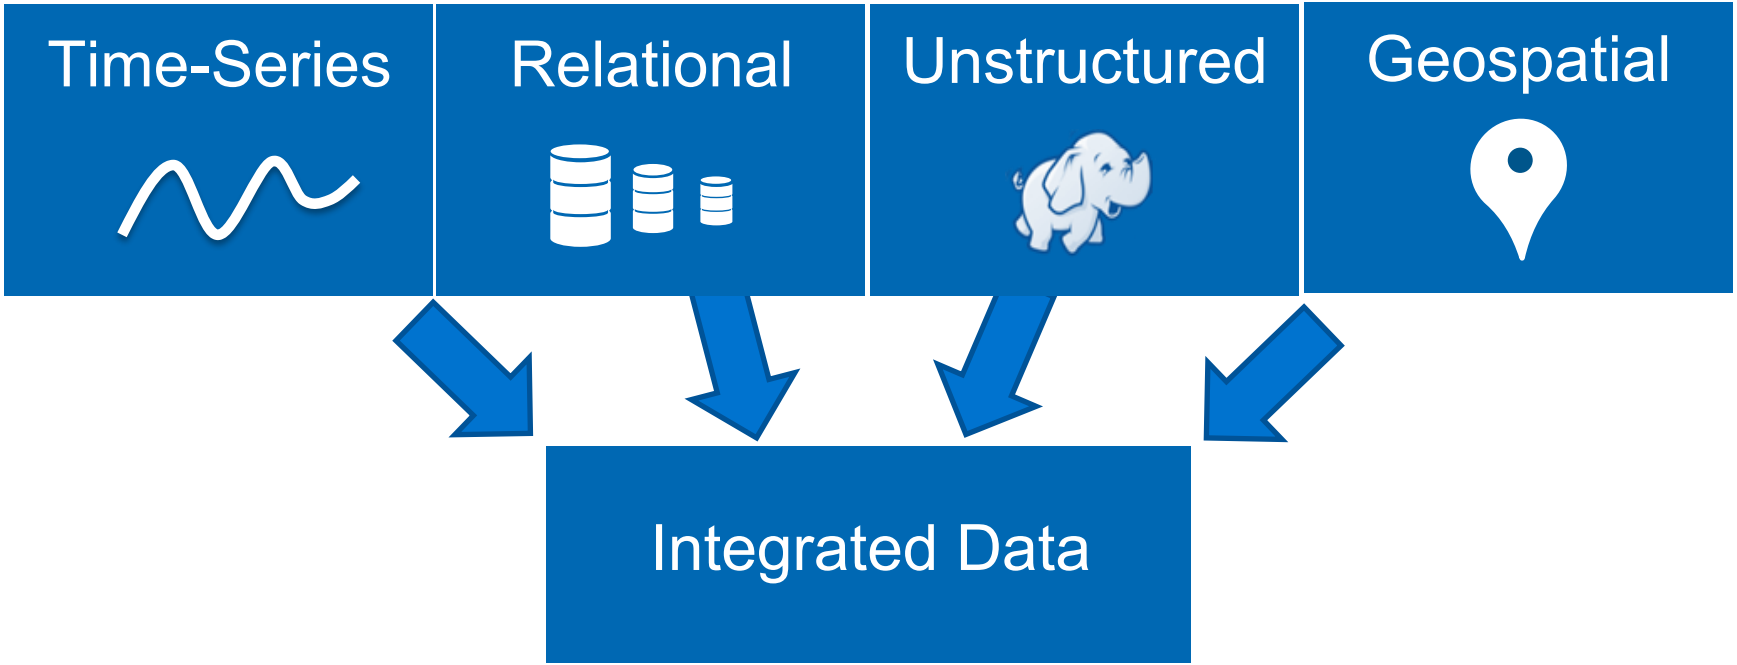
Pharmaceuticals

- What product is being made?
- When is the equipment empty?
- Where was the instrument when I took that measurement?

Transmission & Dist.

- How are renewables impacting equipment?
- Was there a voltage violation?
- What are the changes in weather?

Data Integration Brings Together Different Data



Integrate, verb: combine (one thing) with another so that they become a whole

Time-Series Data is Complex!

Turbine 1

Speed

Bearing Temp

Oil Temp

Turbine 2

Speed

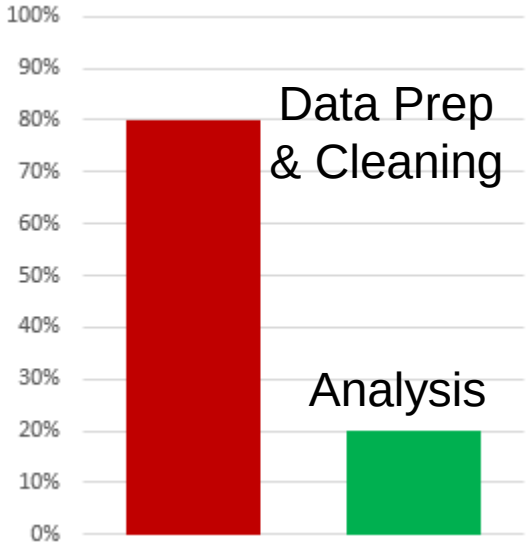
Bearing Temp

Oil Temp

Wear Factor

Data Integration Projects are Challenging

Time

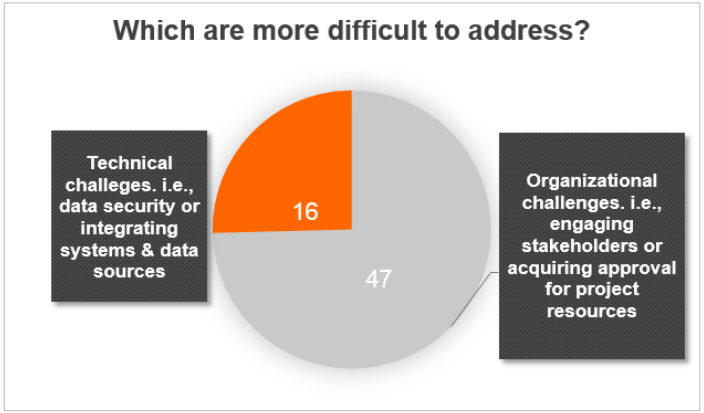


Warning: Currently, data analysts spend 50-80% of their time merely collecting and preparing data[1]

Expense

Warning: data integration often requires ongoing upkeep

Risk



Warning: If “why?” for the project is not clearly communicated, business barriers will delay and risk the project

Microsoft® SQL Server®

SQL

ORACLE® DATABASE 12c

SAP® HANA

Streaming Analytics – 2017

IoT Hub

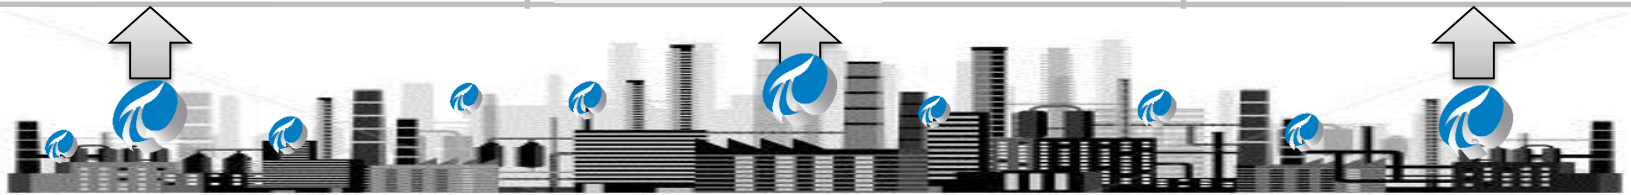
Machine Learning

Stream Analytics

Spark

kafka

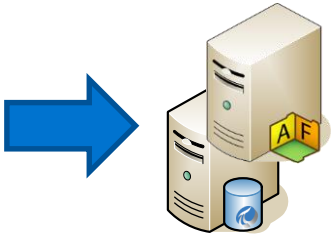
SAP®



What Can This Look Like?

Example application:
Comparing data from smart badge sensors

Badges worn by individuals track environmental conditions in different areas



Badge data is streamed in real-time to an OSIsoft PI System

1. Smart badge sensors generate data
2. The PI System collects, manages, and enhances that data
3. **Our goal:** use SAP HANA to detect patterns in the data stored in the PI System

Solution: a PI Integrator can publish data from the PI System into SAP HANA!

Customer Example: Deschutes Brewery

Leveraging the PI System and Cortana Intelligence to Increase Process Efficiency

COMPANY and GOAL

Deschutes Brewery is the 7th largest craft brewery in US, and wanted to maximize production with its existing infrastructure to fund construction of a 2nd brewery in Roanoke, VA

CHALLENGE

Batch's phase transition happens between manual density measurements occurring every 8-10 hours

- Impact: Losing up to 72 hours in production time

SOLUTION

Use data science to achieve accurate predictive analytics for determining a batch's density measurements

- PI System
- PI Integrator for Microsoft Azure
- SQL Data Warehouse
- Azure Machine Learning
- Azure Data Factory

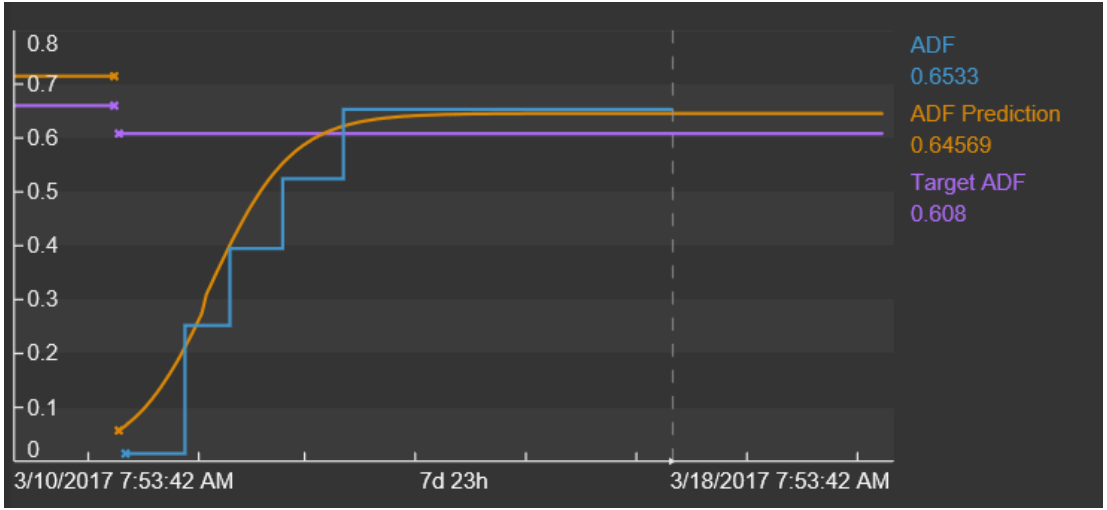
RESULTS

Ability to eliminate production time losses and increase production capacity

- Accurate predictions of when a batch's phase transitions from fermentation to free rise

Detecting Early Deviations and Taking Corrective Action

Black Butte Porter – Vessel 45



Indications:

- Uncharacteristic fermentation

Actions taken:

- Transition to free rise early

Results:

- Production time reduced
- Batch saved
- Quality maintained

Call to action: Help us shape the future of our products!
