

IloT Data Collection with the PI System

Presented by John Maytum

OSIsoft on Industrial IoT

“Connecting people with sensor based data
in ways that were physically or economically
unrealistic before”

What's Driving the Interest in IoT?

Cheap and
tiny sensors

Decreased
compute and
storage costs

New abilities
to process and
analyze data

Ubiquitous
connectivity

What is Different About IIoT?

Traditional PI System data pattern

A few large “pipes” to systems on premises

IIoT data pattern

Many small “pipes” from IoT devices

PI System Environment for IIoT

Hybrid of traditional PI System and IIoT data patterns

A few large “pipes” to systems and many small pipes to devices on premises or in the cloud

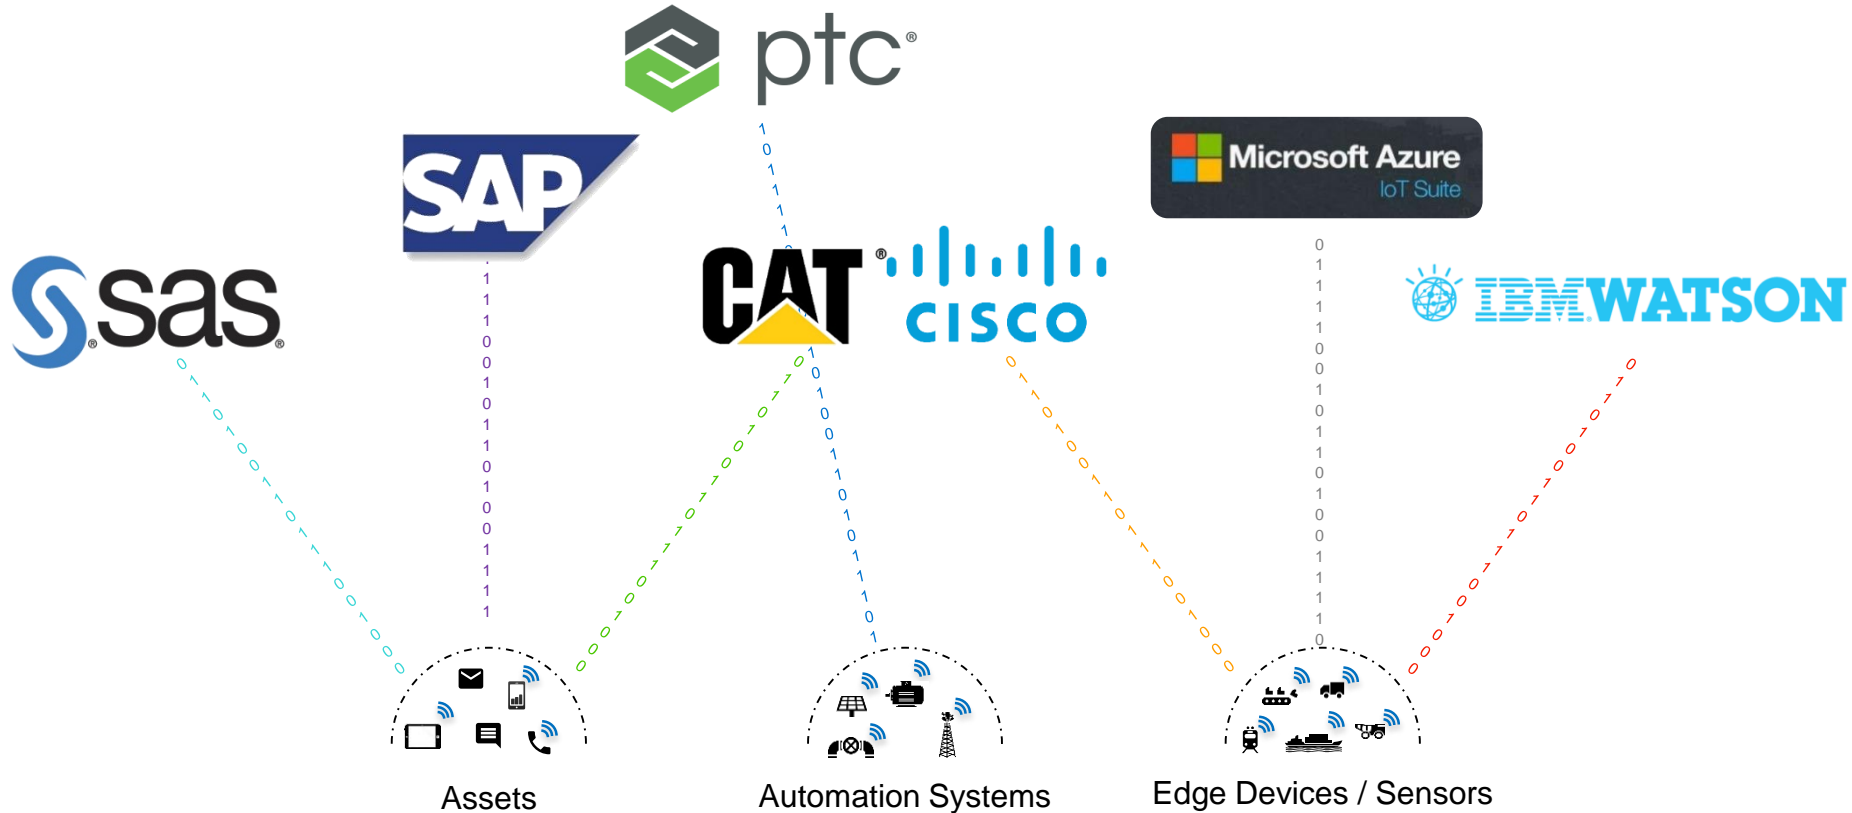

Industrial IoT

Friend

Foe

IoT is Driving Innovation Across the Industrial World

There are Inherent Risks and Challenges

Data Silos

One version of the truth?
Data isolation from other use cases!
Data management challenges!

Edge Devices / Sensors

There are Inherent Risks and Challenges

Data Ownership

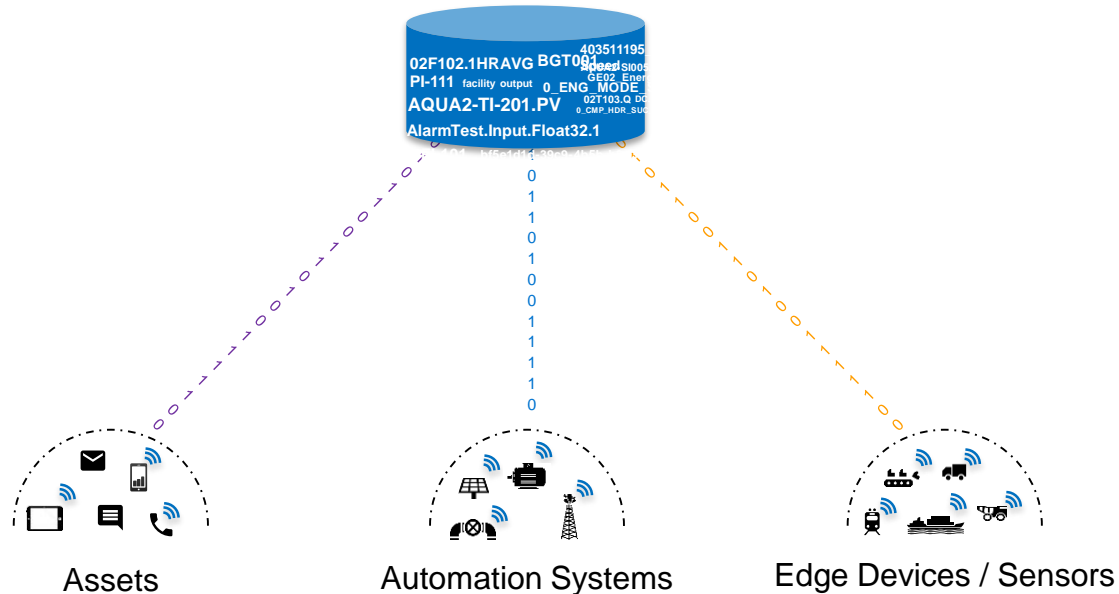

Do I have access to my own data?
How do I ensure that I can move from one solution to another?

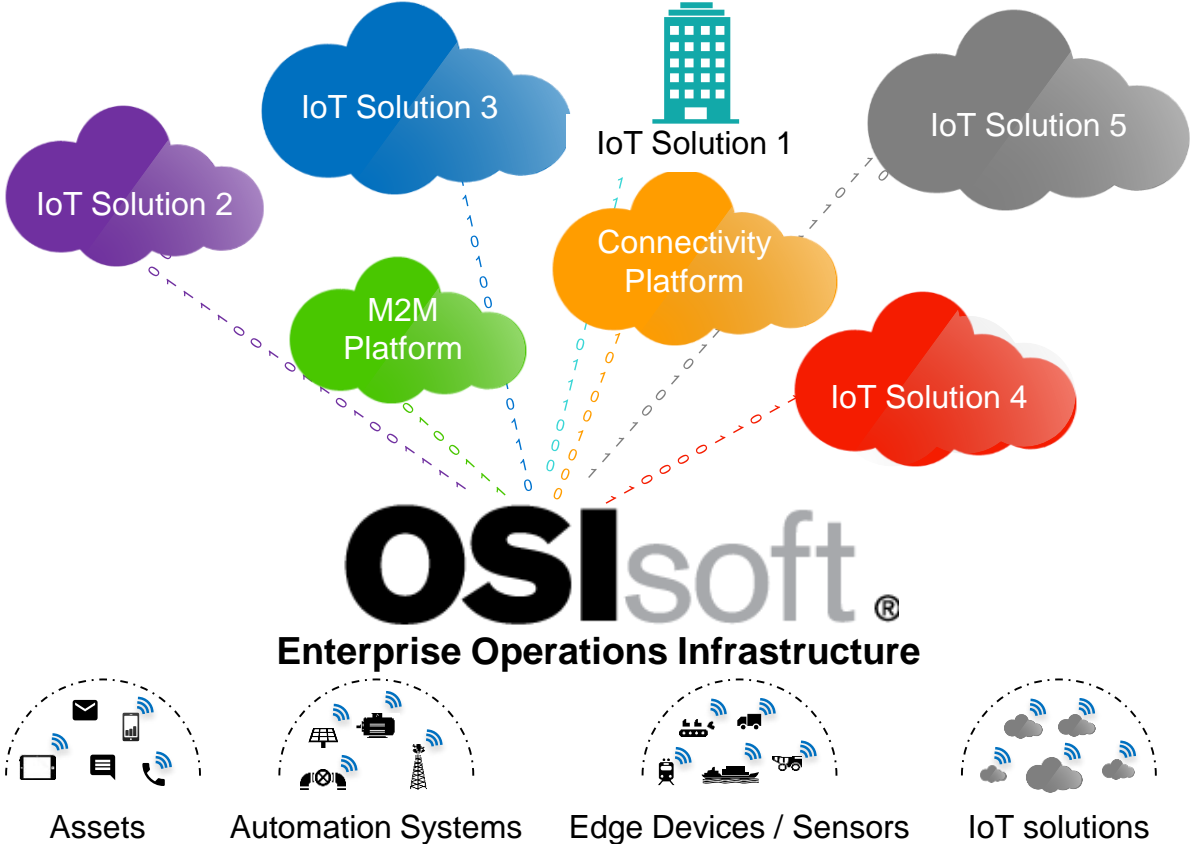

There are Inherent Risks and Challenges

Data Context

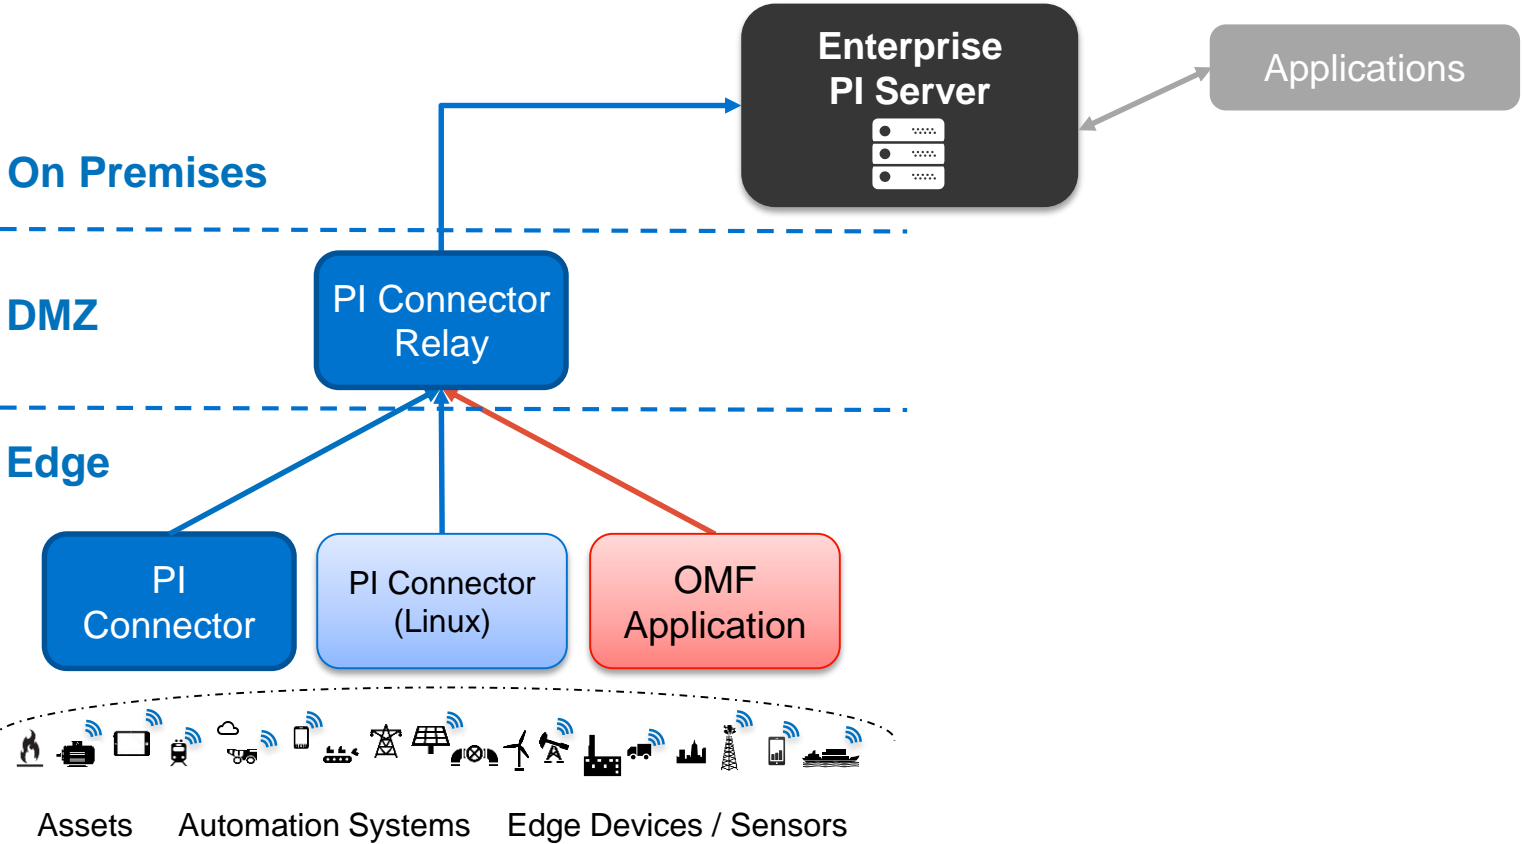

Understanding the criteria to analyze data is as important as the data itself
The further data moves from SME's, the more important context is

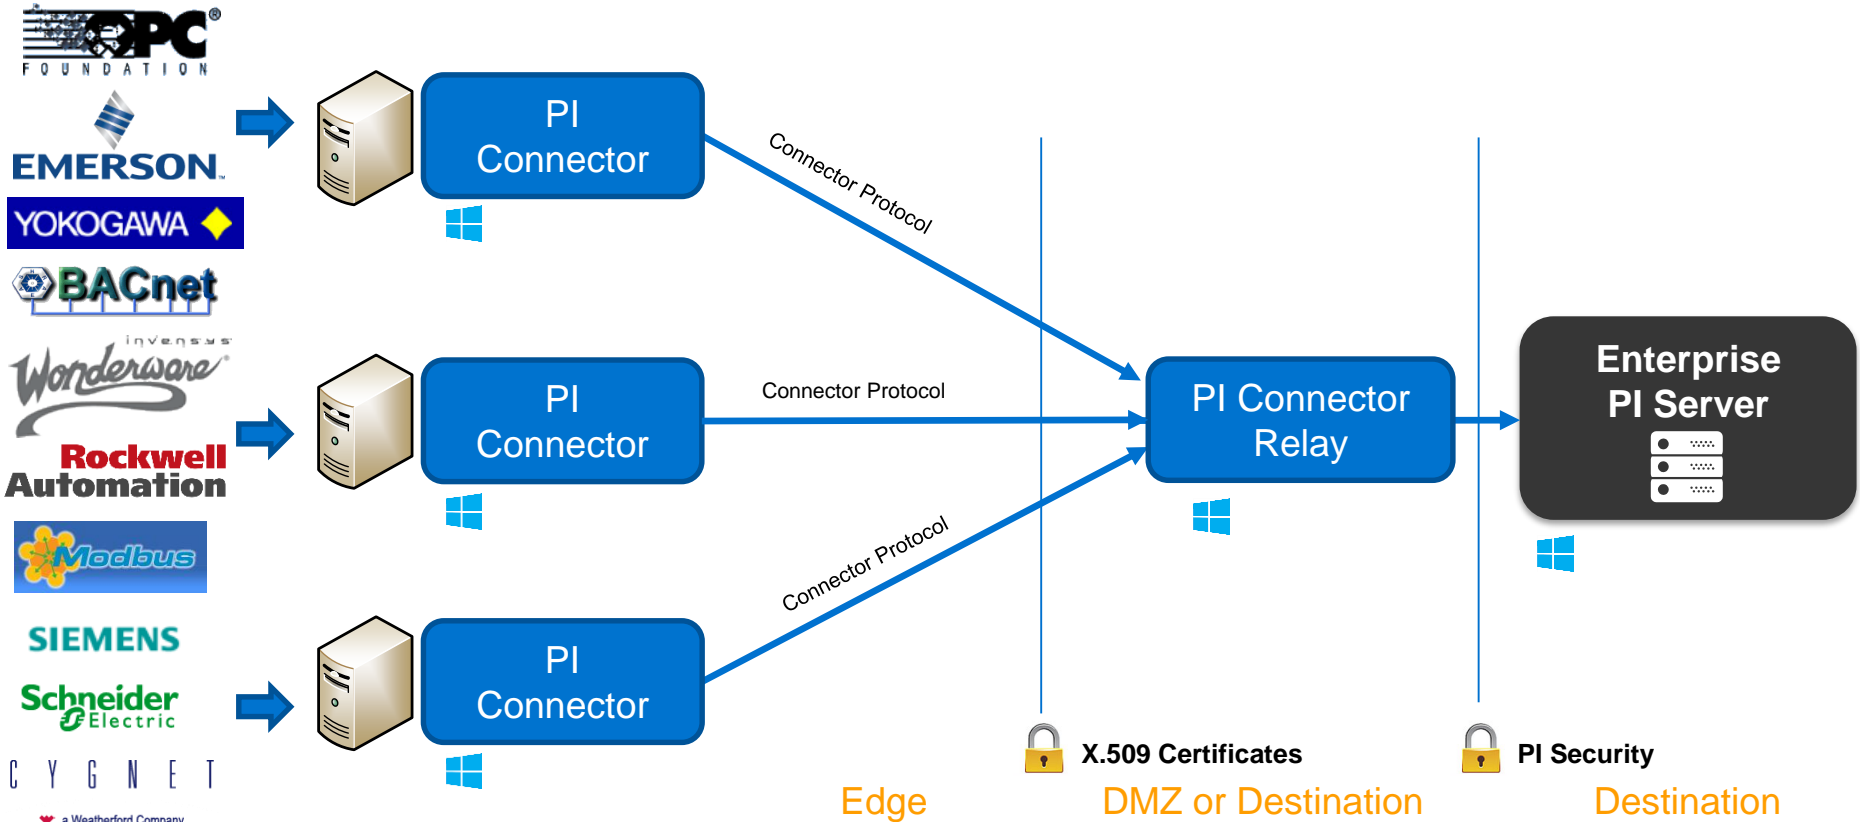

Extend a Time Series Infrastructure from the Edge to the Enterprise

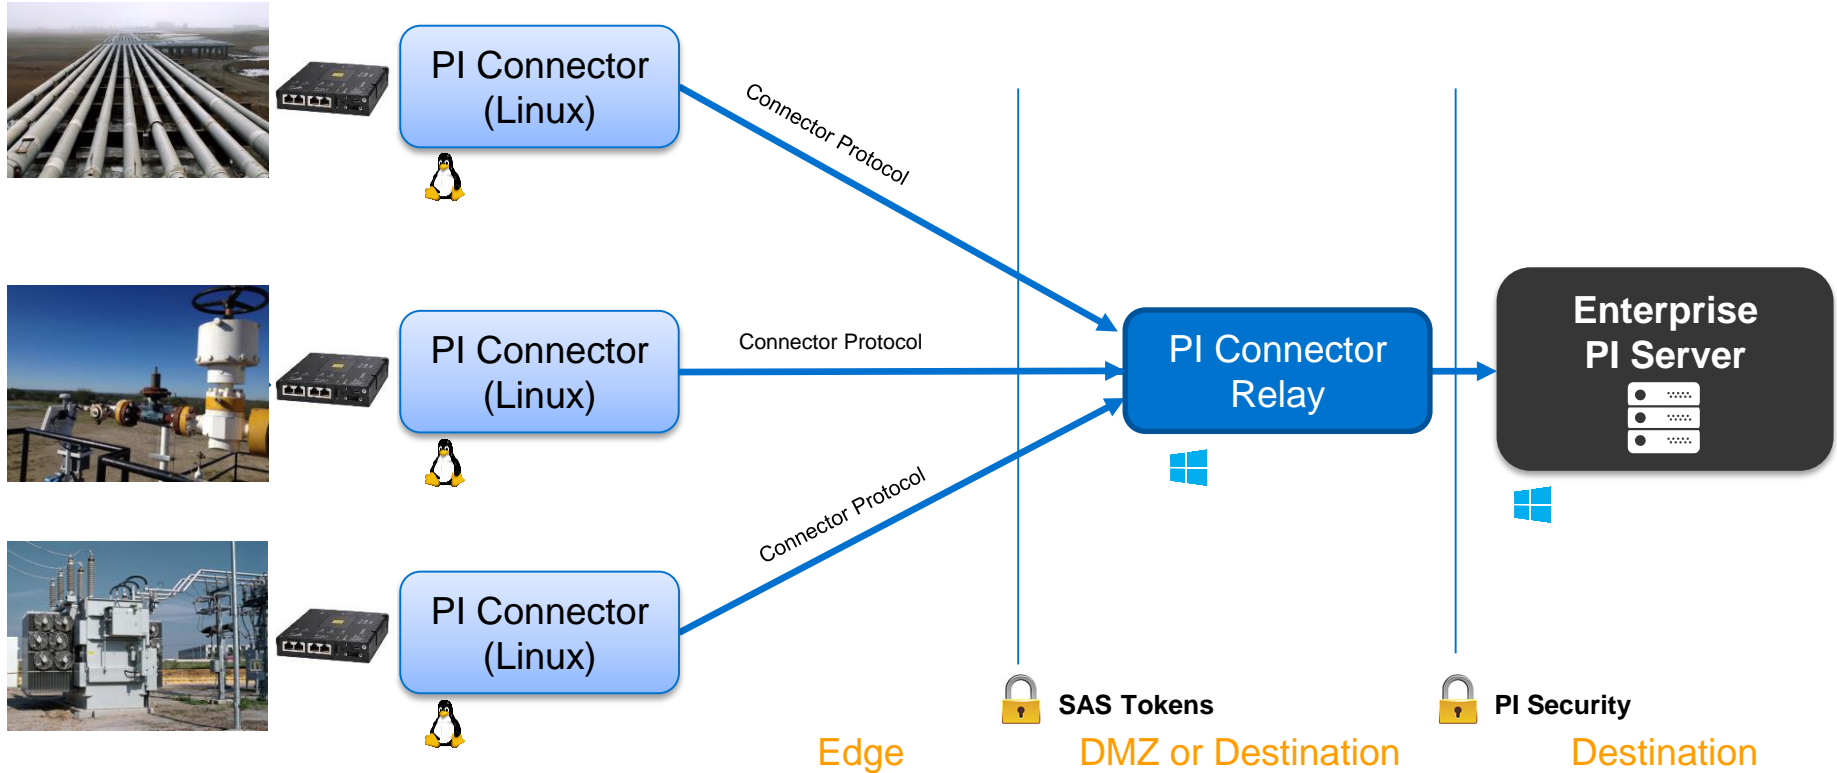

Pervasive Data Collection Architecture

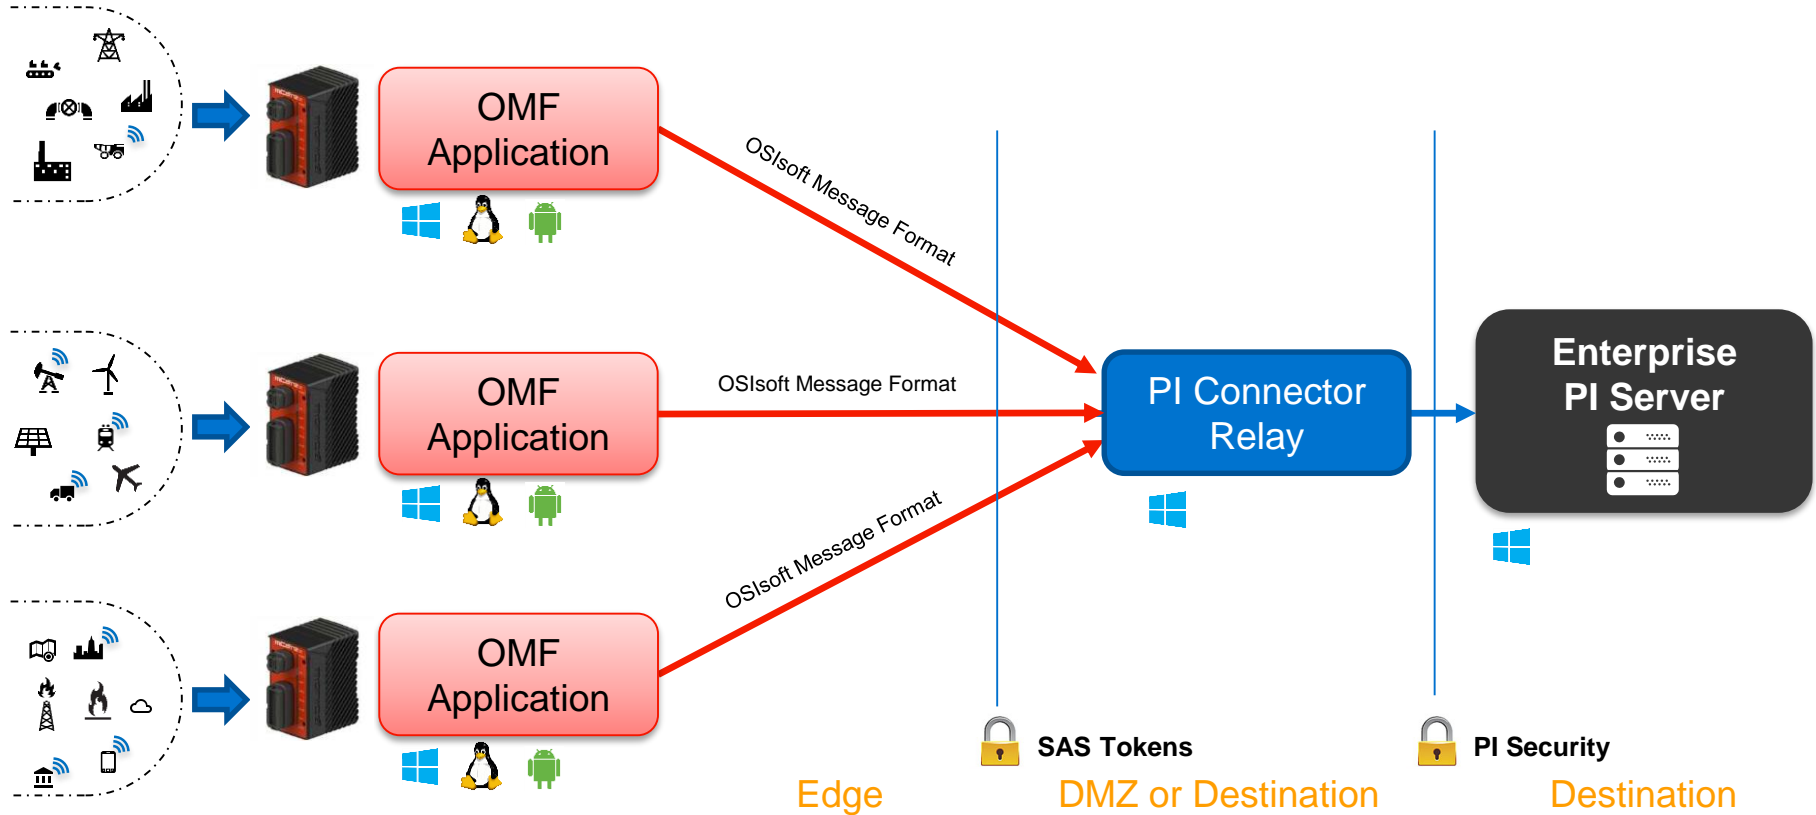

Traditional Data Source Connectivity

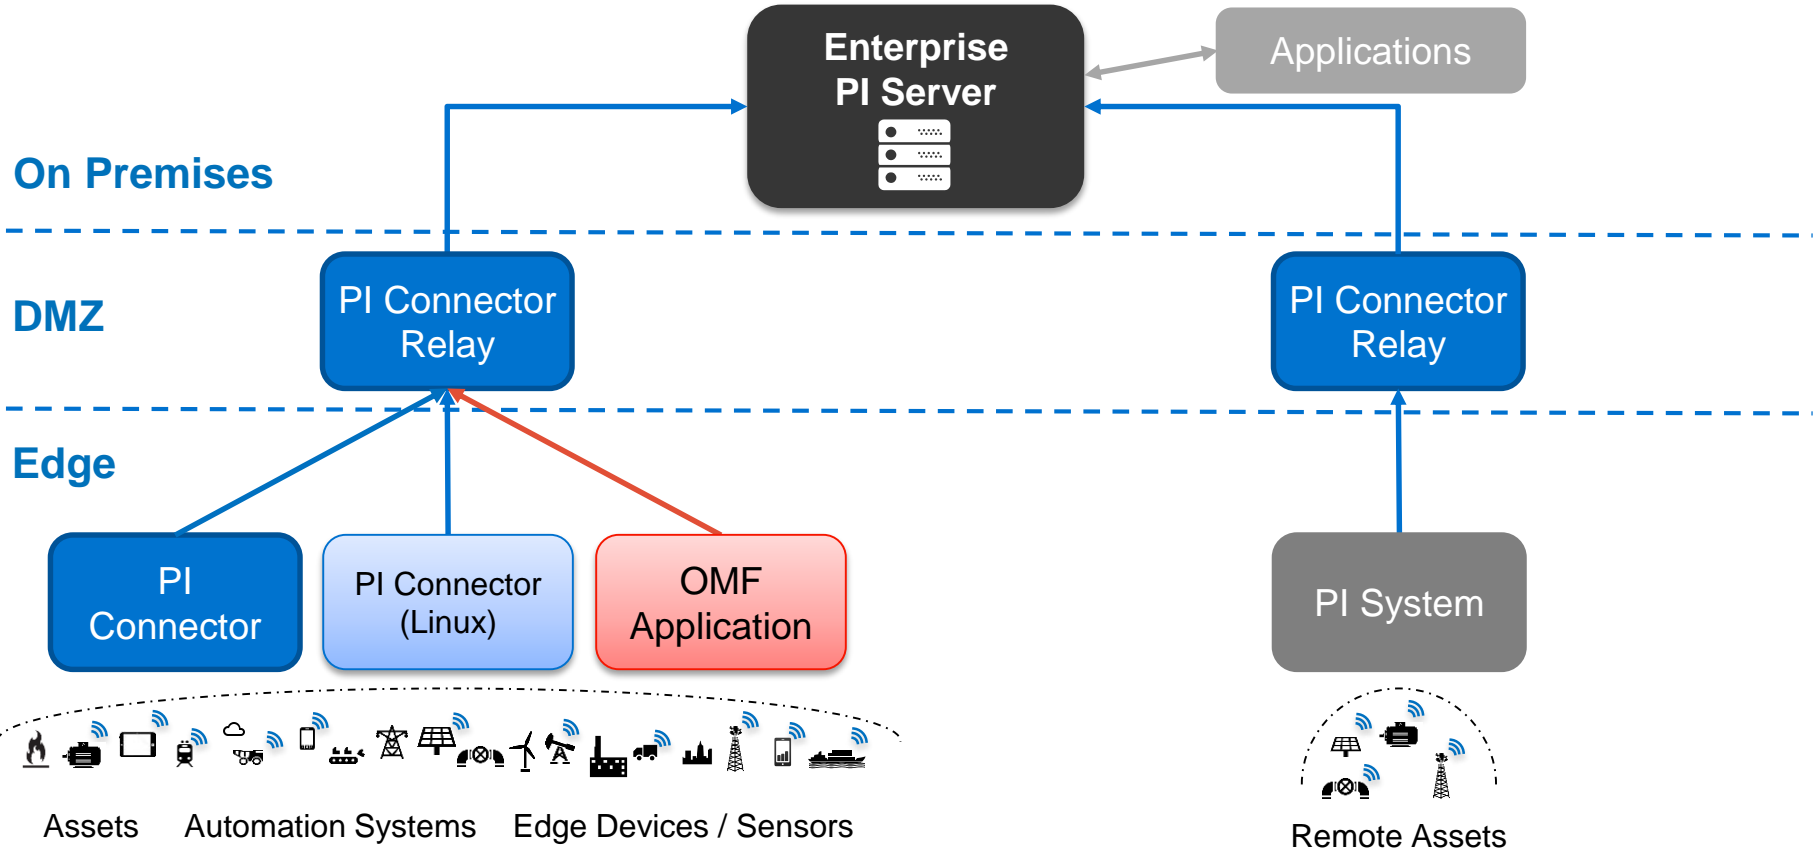

Remote Asset and Device Connectivity

Extended Device Connectivity

Remote Storage, Access and Analytics

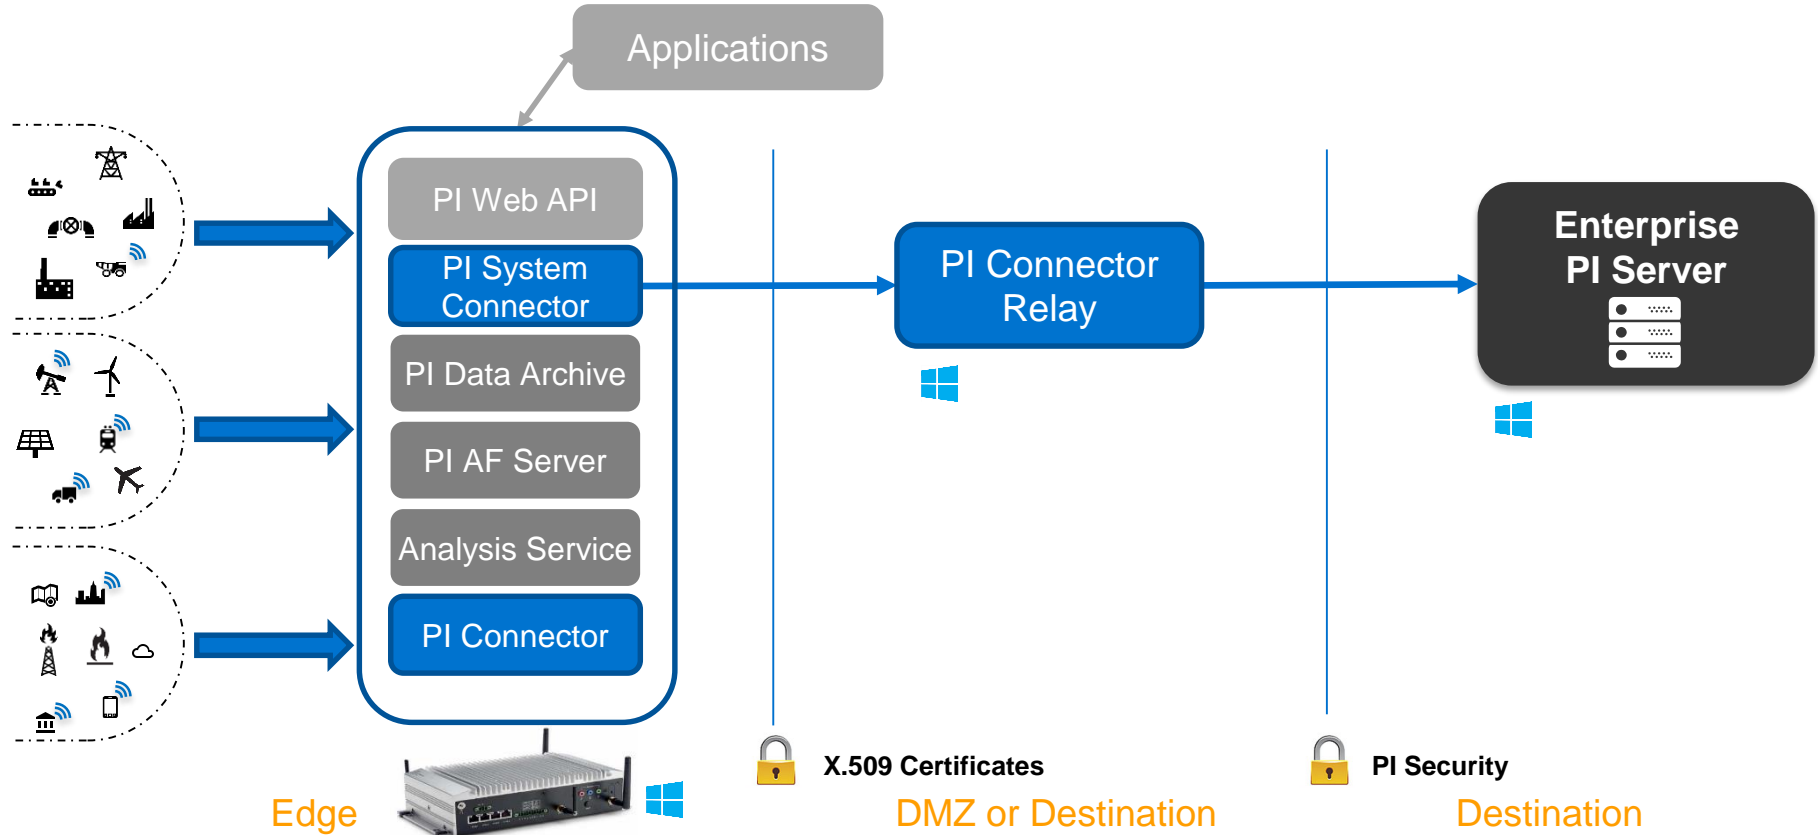

Edge Gateways: An Emerging Class of Hardware

- ✓ Ruggedized chassis
- ✓ Low price points
- ✓ Windows 10 IoT Enterprise OS
- ✓ Capacity for 1k to 2.5k PI tags

PI System for Edge Gateways

OSIsoft Embedded Technology Examples

Service Provider
Monico
(OMF application)

IT Hardware
HPE
(PI System deployment)

IT Hardware
Dell
(PI System deployment)

Automation Hardware Partner
(PI Connector on Linux)

IT Hardware
Cisco
(PI Connector on Linux)

Service Provider
Stratus IoT Solutions
(OMF application)

What Can This Look Like?

Example application:
Collecting power data at the edge

Critically important power data from a Modbus device is available at the edge

That data needs to eventually end up in an OSIsoft PI System, but the edge isn't suitable for running a PC

1. Power data is available at the edge, but there aren't any PCs at the edge!
2. The only hardware available at the edge is a Cisco 829 industrial router
3. **Our goal:** run a PI Connector for Modbus at the edge to collect critical power data

Solution: an embedded PI Connector can run directly on the Cisco edge device!

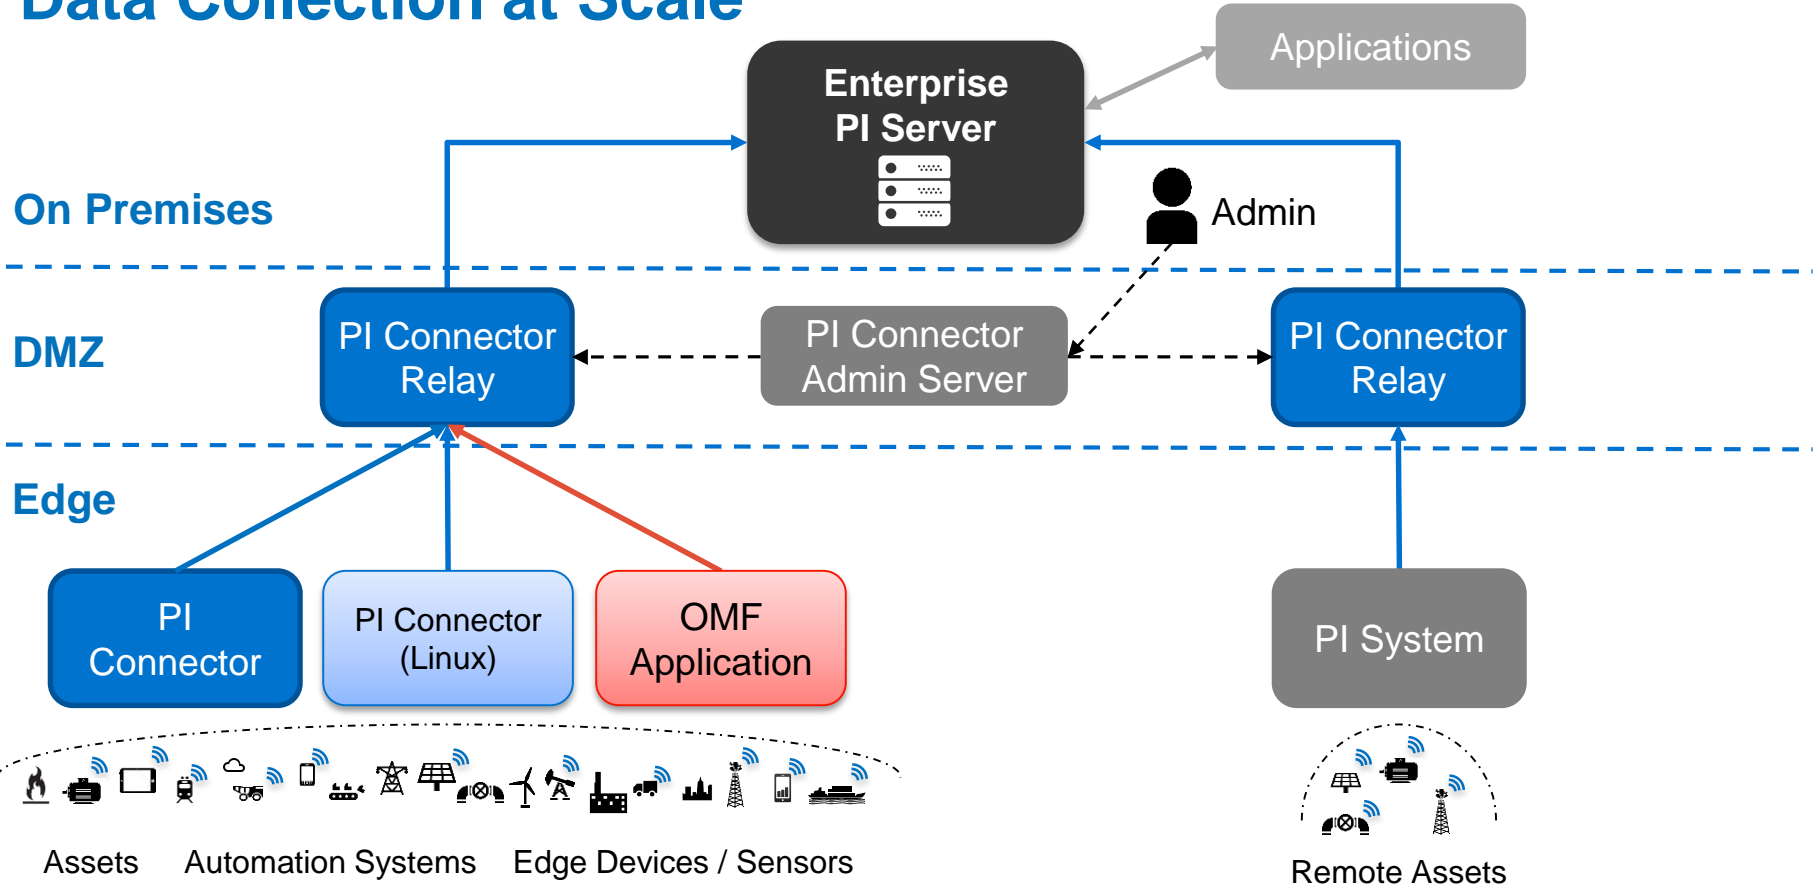

Welcome to **Cisco Fog Director**
