REGIONAL SUMMIT 2017

Your Big Data to Big Data tools using the family of PI Integrators

Presented by **Martin Bryant**
Field Service Engineer

PI Integrators

The Traditional PI System

An Alternative Data Use Model

The world of Big Data tools...

Visual Analytics

Data Warehouse / Data Lake

Streaming Analytics – 2017

Getting Value...

Solving complex problems for a fleet

Multivariate, other statistics & machine learning resources
One time answers or Running models

Dashboarding – visual reporting – real time & mobile

Drill down, rollup
Anywhere anytime

Integration to new I.T. projects and databases

The right way to bring operational data to I.T.'s Big Data party...

Why? ... complex problem solving

Statistical Analytics

- Identifying **patterns** and discovering problems through statistical methods that require **large** and **diverse** datasets

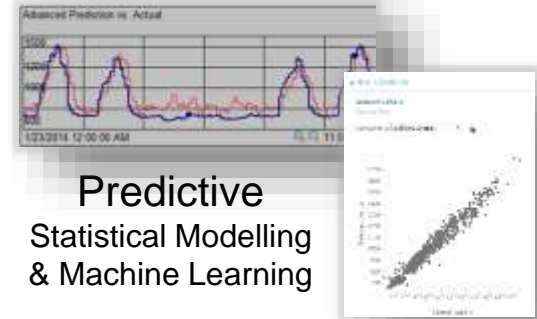

All PI Customers have a great deal of data.. Often too much for effective analysis in a spreadsheet. This data can be complex with many variables. Multivariable analysis and machine learning can provide interesting and invaluable answers to complex, big questions...

PI data is very large and complex.

This is about finding the answer to large, complex questions.

Multidimensional
Business Intelligence
& Dashboards

Predictive
Statistical Modelling
& Machine Learning

Complex Analyses Increase the Need for Deeper Integration

Complexity ↑

Disparate assets
Interacting with assets on an individual basis

Interacting with common assets as a fleet

System Optimization

Monitoring

Real-time visibility

- Traditional HMI

Process Optimization

Real-time & historical views across any asset

- PI ProcessBook
- PI Coresight
- PI Datalink

Benchmarking

Fleet-wide performance comparisons

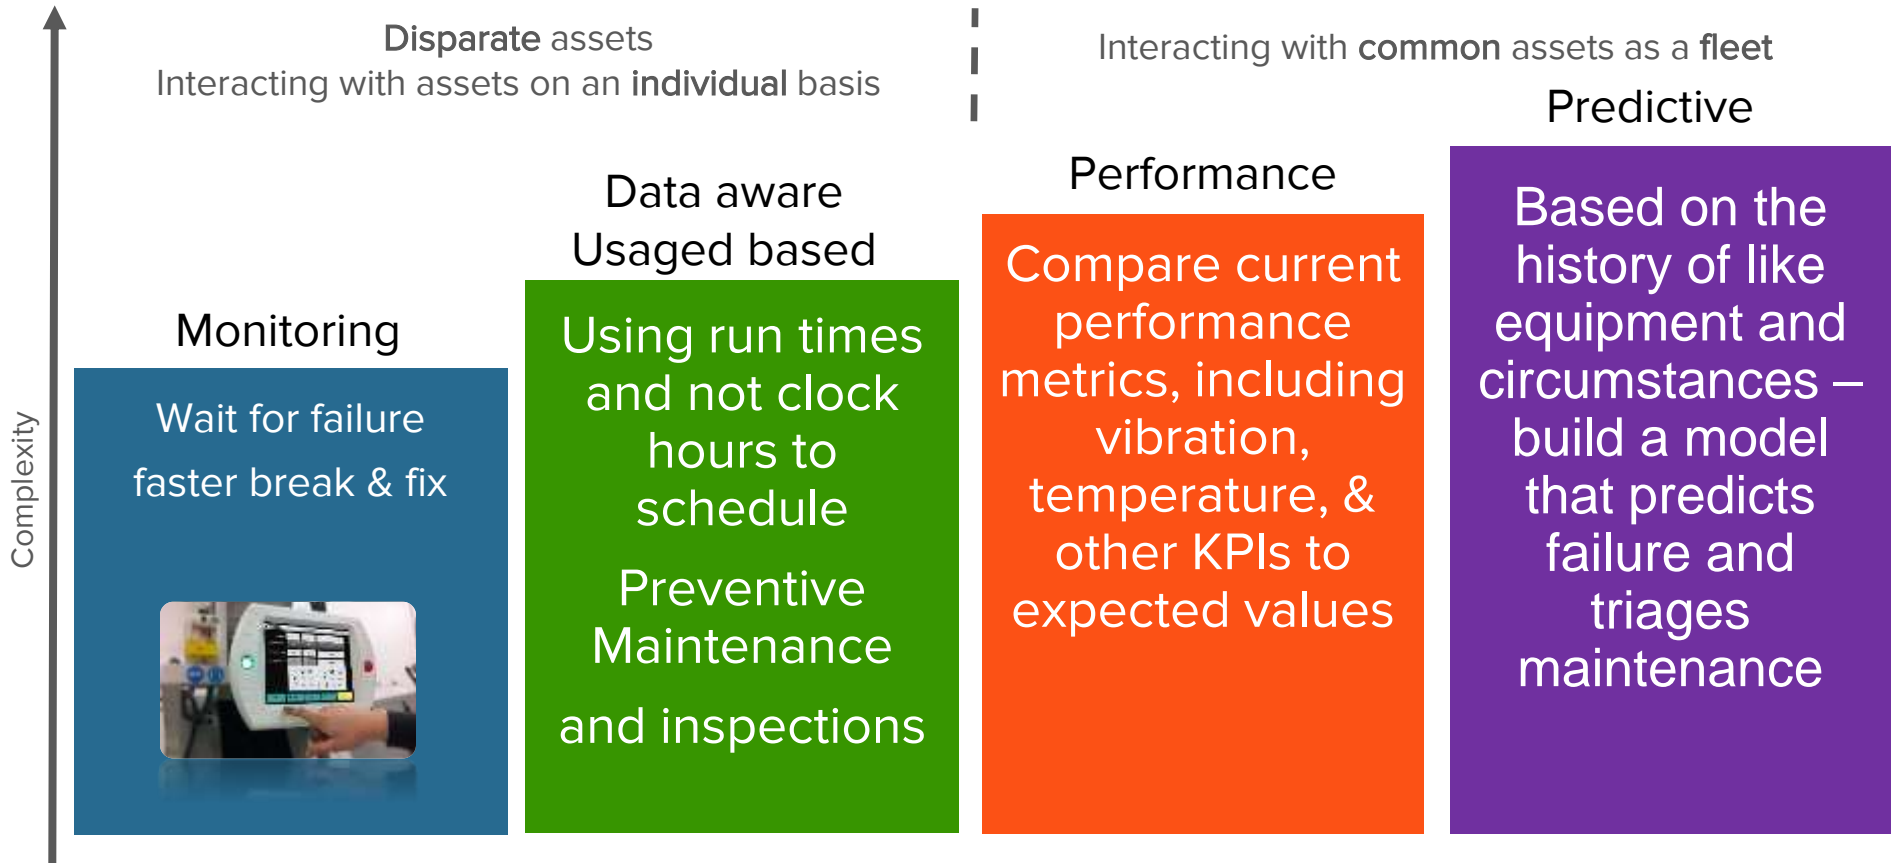

- BI app (e.g. Tableau, Spotfire, Lumira)
- PI Integrator for Business Analytics
- PI Integrator for SAP HANA

Large scale multi-variate analysis

- Machine learning (Azure ML, R)
- PI Integrator for Business Analytics
- PI Integrator for SAP HANA

Applying Data to Maintenance...

Why? Dashboarding

Visual Analytics

- **Visualizing diverse** sets of data sources to gain insights, create reports, and improve operations

Rockies Oil (BOD): Actual v. Budget

Rockies Gas (MCFD): Actual v. Budget

Scheduled and Ad-Hoc Reporting

- Automated daily reports
- Multiple data source views
- Management overviews
- KPIs and metrics
- Rollups by business unit
- Future Data (forecast)

**Don't wait for tomorrow to explore performance today
your operational data is a click or swipe away.
Even from your mobile devices**

Result: Improved, Detailed Reporting and Analytics

Dashboard drilldowns
to detailed reports

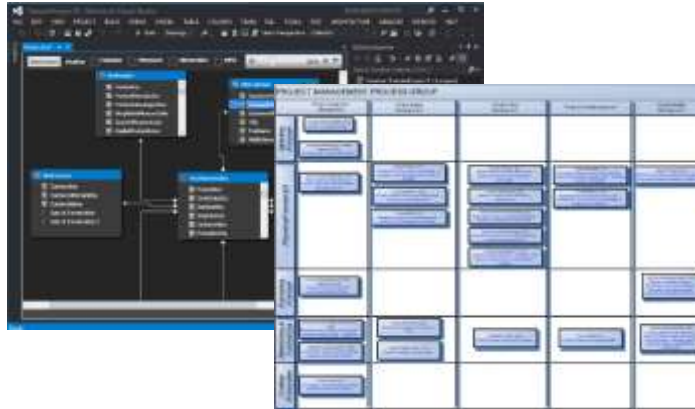

Why? I.T. Integration projects

Data Warehousing

- **Centralizing data** from **different** business systems
- More effectively analyzing and reporting on business and building LOB applications

Information systems have projects that provide enormous value – and those can benefit from the real-time process awareness of PI Data. But PI Data hasn't been easy to integrate – until now.

Structured PI data in a format readily consumable by the latest I.T. tools.

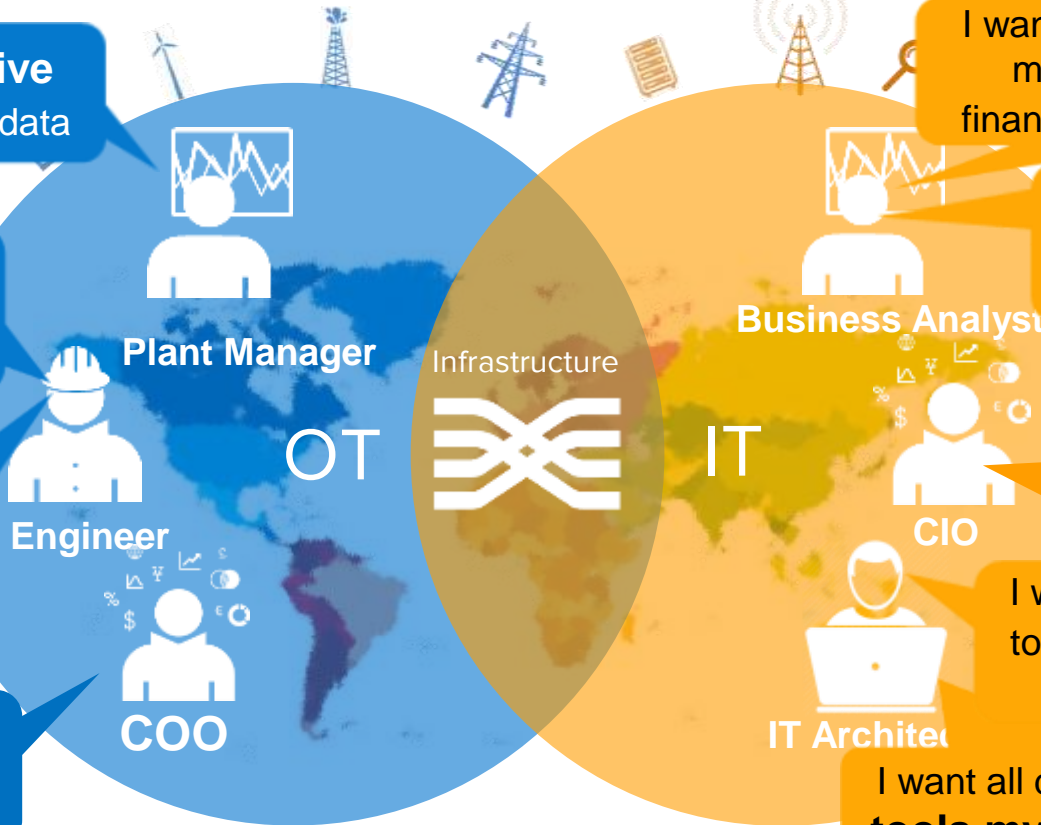

New Technology is bringing the IT and OT Worlds Together

I want to build **predictive models** from historical data

I want to spend less time on **operational reports**

I want to **compare my equipment** against our other sites

I want to **minimize risks** through data driven decisions

I want to analyze production, maintenance logs, and financial **data all together**

I want operational data for the **Big Data project** we're starting

I want **trusted production data**, to be confident in our decisions

I want the operational data to **work with our other technologies**

I want all data accessible by the BI **tools my users already know**

Oil and Gas

Drilling and production comparisons
Information distribution

Mining

Route optimization
Energy reduction
Across 300 haul trucks

Life Sciences

Reactor comparisons
Process scale-ups
(1L, 3L, 10L, 1kL, 10kL)

Renewables

Energy production reports
Wind farm comparisons
Outlier analysis

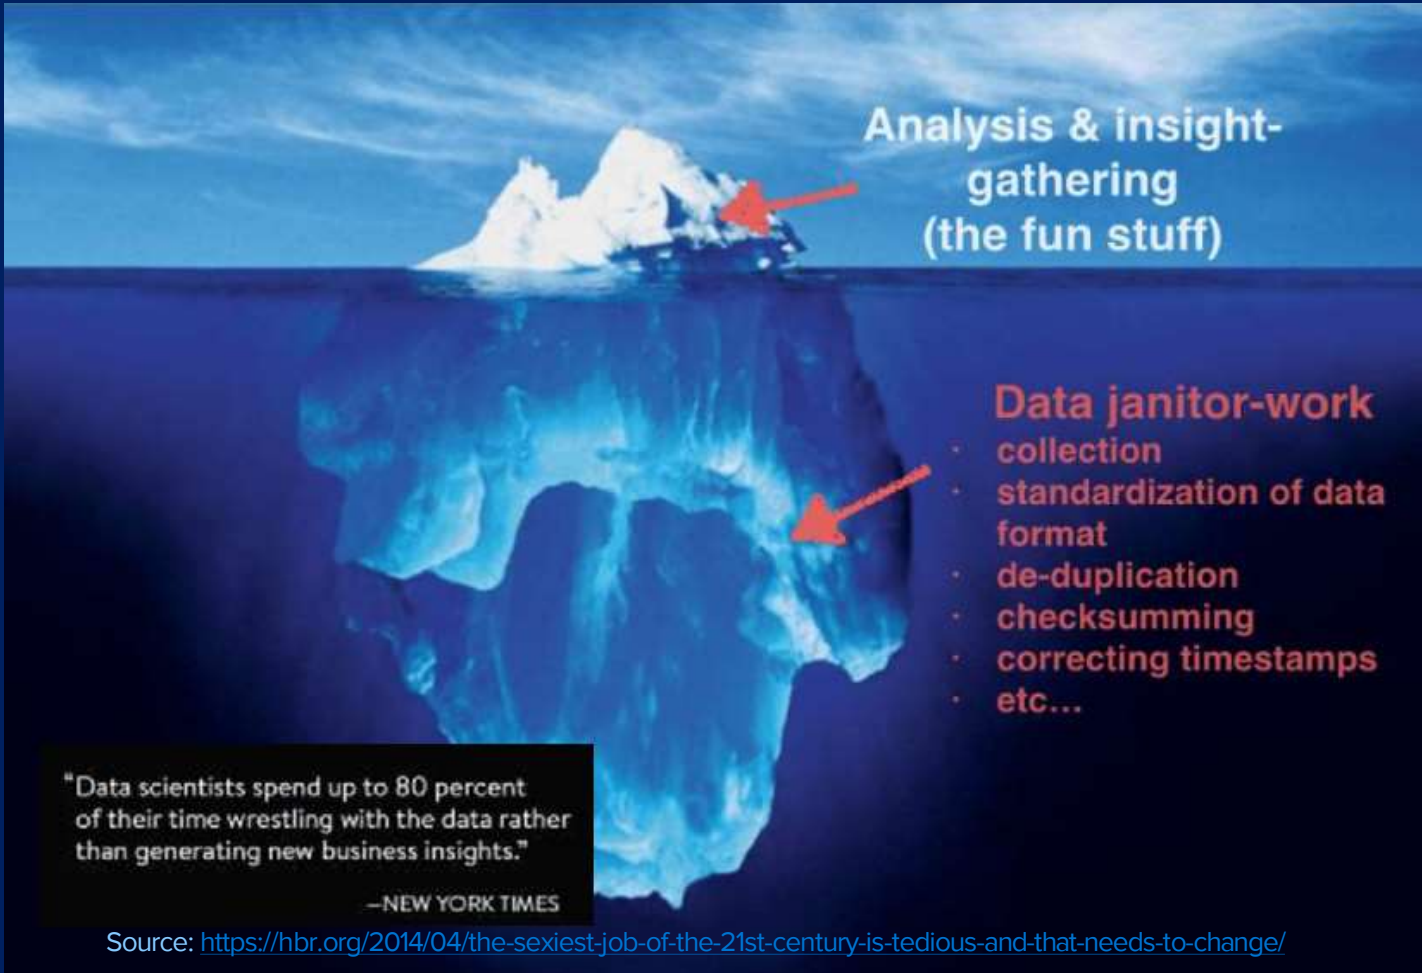

PI Integrator for Business Analytics is in use today!

- ✓ IT/OT integration
- ✓ Business intelligence and reporting
- ✓ Data warehouse integration
- ✓ Supporting cross-platform projects

Food and Beverage

Utility usages
Process analytics

Analysis & insight-gathering
(the fun stuff)

- Data janitor-work**
- collection
 - standardization of data format
 - de-duplication
 - checksumming
 - correcting timestamps
 - etc...

"Data scientists spend up to 80 percent of their time wrestling with the data rather than generating new business insights."
—NEW YORK TIMES

Source: <https://hbr.org/2014/04/the-sexiest-job-of-the-21st-century-is-tedious-and-that-needs-to-change/>

PI AF can provide context and structure

Operational Context

Time-series data

- Temperature
- Pressure
- Flow

Asset details

- Name
- Model
- Manufacturer

Process

- Well drilling
- Site

Asset

High Value Insights Require Data Context

Which asset performs best?

Which conditions are optimal?

What are the indicators of failure?

What leads to unsafe conditions?

What causes quality issues?

Cleaning & Preparing Sensor Data: It's Challenging

Three steps from PI System (AF) data to Big Data tools.. .

Select based on template (schema), intelligent filters, and time

Prepare clean, filter, & synchronize the data for tabular tools

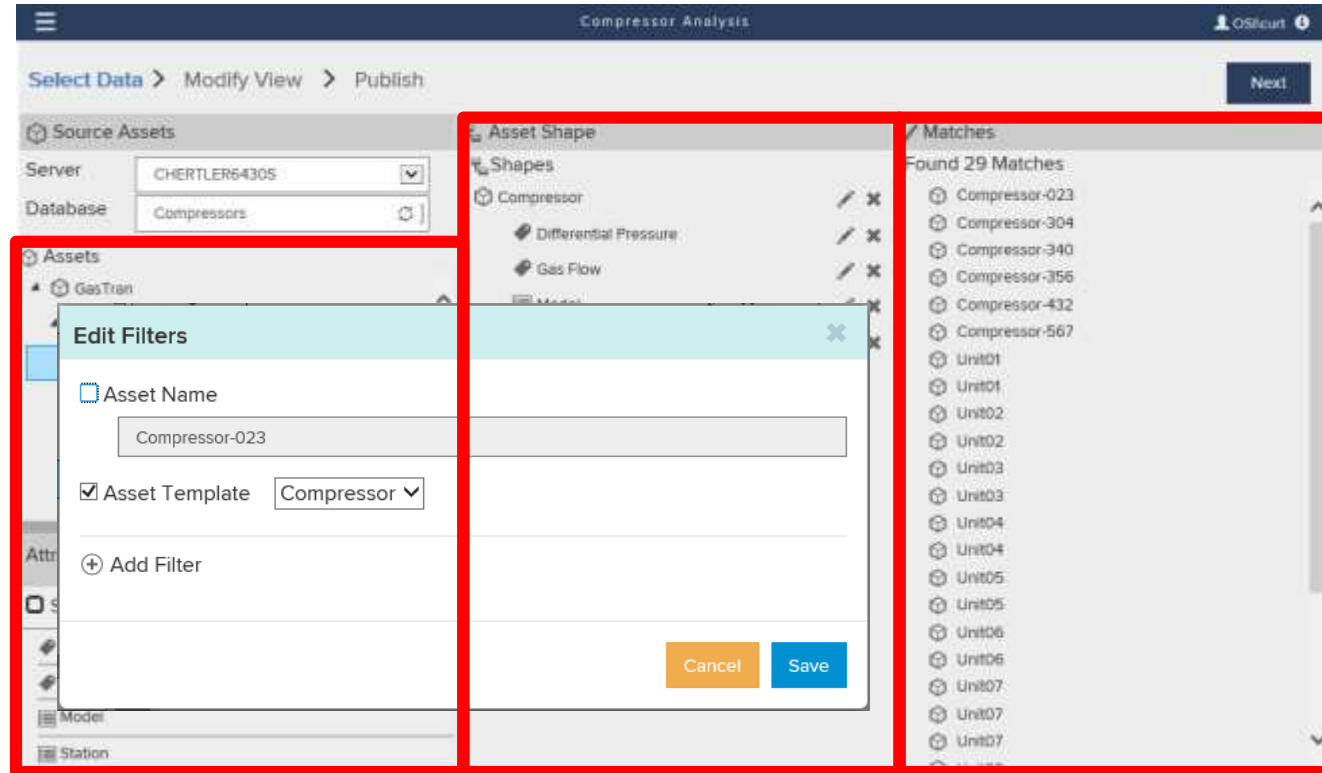

Publish and update the data on a schedule

A configured tool (no code) for PI System (AF) data and PI Event Frames
PI is still the source, rebuild your big data cache on your rules at any time.

PI Integrator for Business Analytics - “Select Data”

- Intuitive way to create tabular content in “PI Views”
- Requires AF Hierarchy
- Select AF Elements and Attributes
- or Select Event Frames
- Scale up leveraging name, hierarchy, or category

PI Integrator for Business Analytics - “Modify View”

- Select time range and interval
- Add columns for proper aggregating & synchronization of PI System data
- Filter / clean data for null or bad values, missing data, out of range data or based on process conditions

Compressor Analysis

Select Data > **Modify View** > Publish

Start Time: Saturday, October 1, 2011

Compressor	LocalTime	Differential Pressure	Gas Flow	Model A
Unit01	2011-10-01 00:00:00	93.3622	100.6735	Model A

First Run

Nov 2015

Su	Mo	Tu	We	Th	Fr	Sa
25	26	27	28	29	30	31
1	2	3	4	5	6	7
8	9	10	11	12	13	14
15	16	17	18	19	20	21
22	23	24	25	26	27	28
29	30	1	2	3	4	5

Hour: 00 Minute: 00 Second: 00

Summary

Shape and Matches

- There are **29 Matching Instances**.

Timeframe and Interval

- Your Start Time is **Saturday, October 1, 2011 12:00:00 AM**
- Your End Time is **Tuesday, November 1, 2011 12:00:00 AM**
- Your Time Interval gets an interpolated measurement every **1 minutes**.

Publish

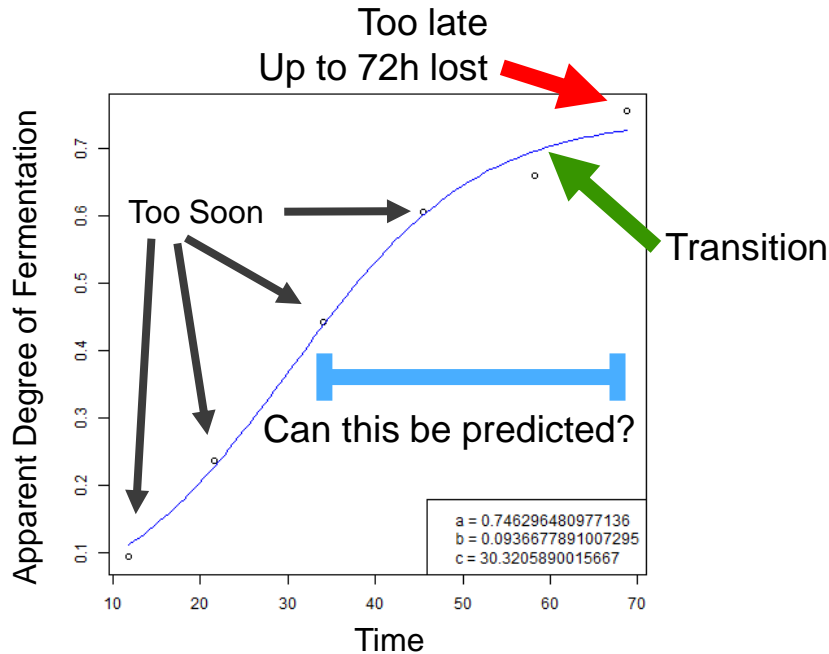

Deschutes Brewery

- Located in Bend, OR
- Founded in 1988
- Pub opened in Portland, OR in 2007
- 2 brewhouses
- 50+ vessels
- Bottling and kegging
- 7th largest craft brewer in the U.S.

Production Challenges

Filling ► Fermentation ► Free Rise ► . . .

Options?

Invest \$750K
(or more) in
inline density
meters

or

Continue
predicting
transitions
with
spreadsheets
and manual
readings
every 8-10
hours

More Challenges

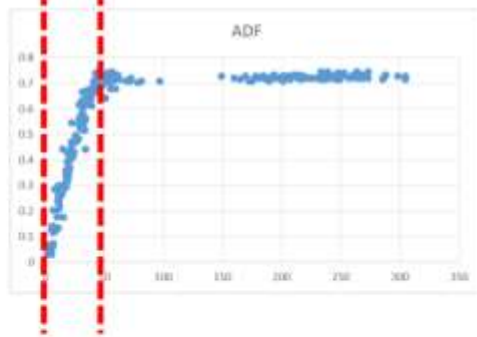

- Transition occurs between manual density measurements
- Beer brands vary in transition

Predictive Analytics in a Spreadsheet

Bring Raw Data In

TV	Brand	TV Full	TV Full %	Timestamp	Hours since TV Full	ADF

Clean it Up

New Challenges

- How can the **data preparation** be automated?
- How can the **predictions** be operationalized?
- How can the **predictions** become more accurate over time?

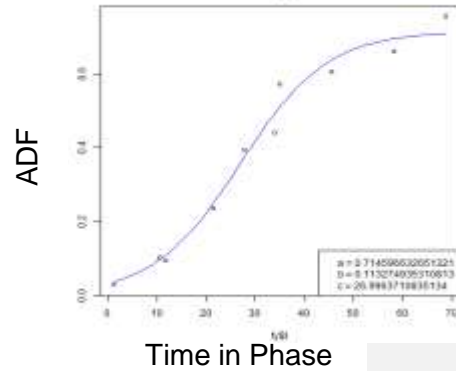

Fit to a Line

Hypothesis: Use early density readings to predict Free Rise Transition Time

influenced by:

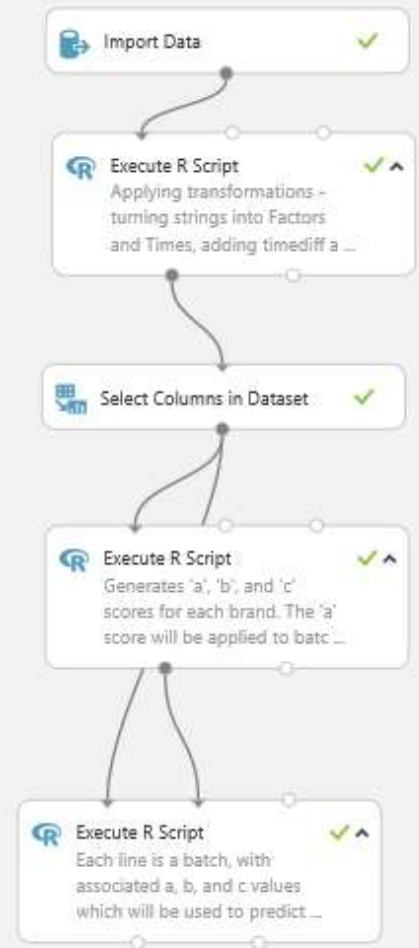

- Brand of Beer
- Fermentation dynamics (Temperatures, pressures,...)
- Vessel's dimensions & volume

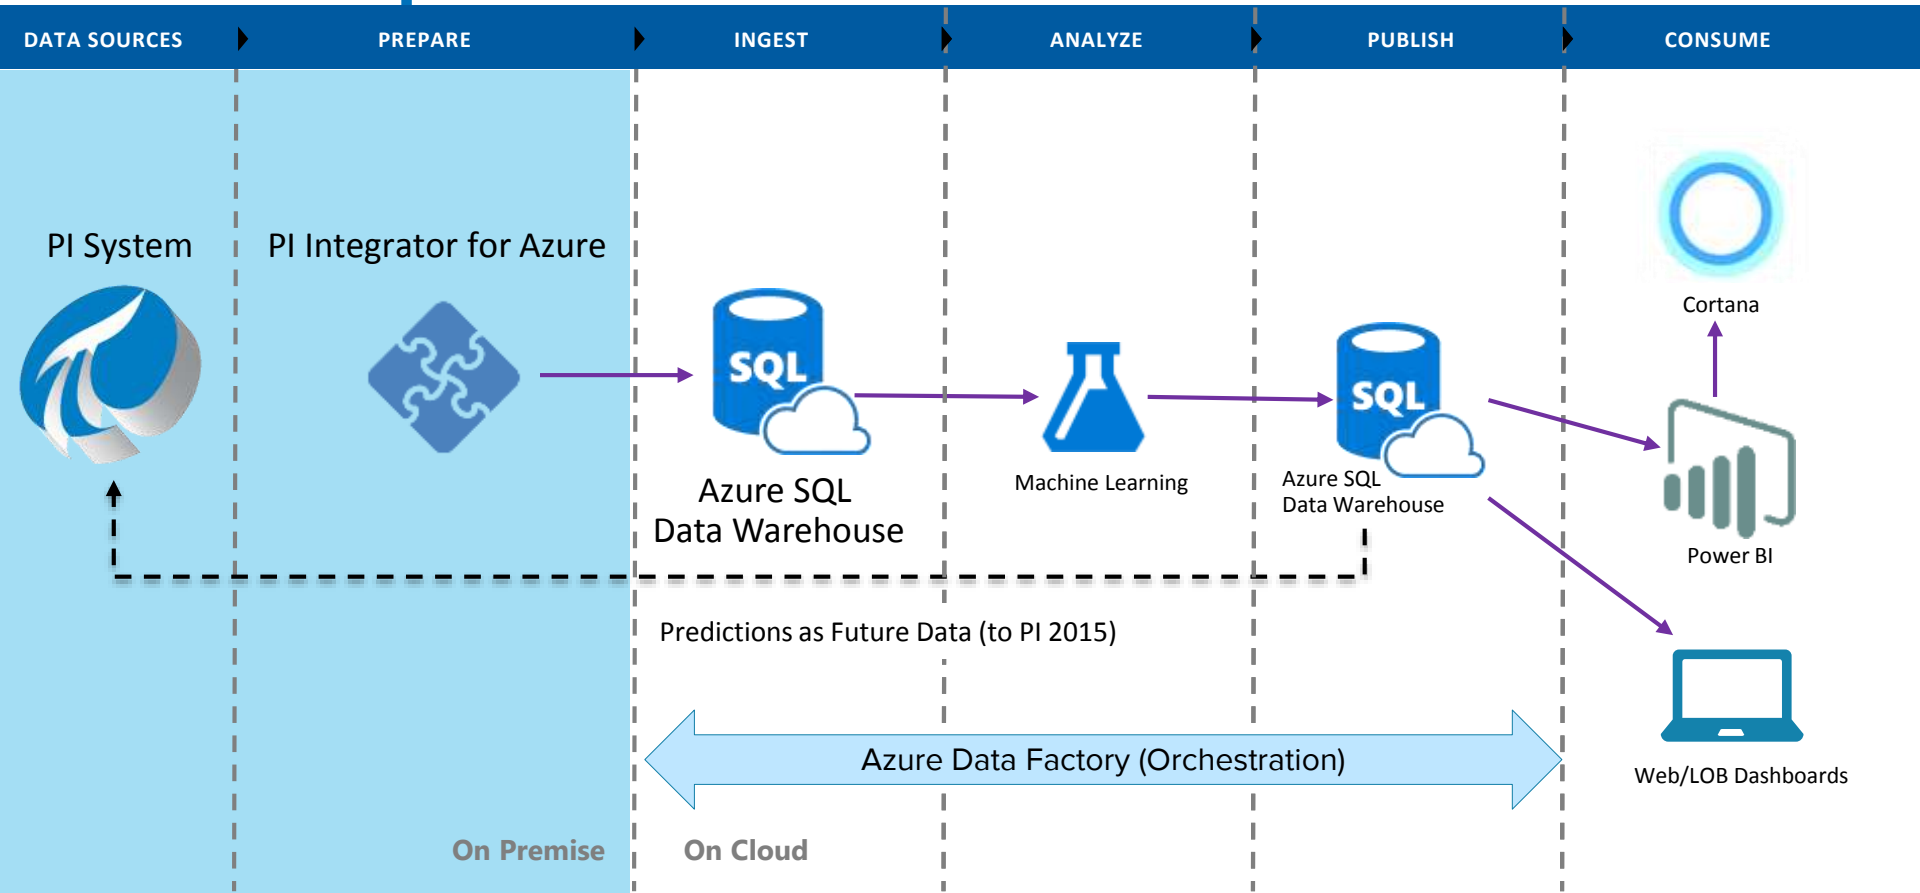

Microsoft Data Scientists

Cortana Intelligence Suite

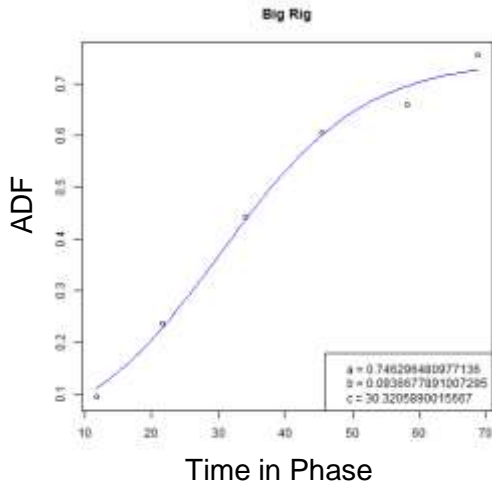

How to Operationalize Predictions

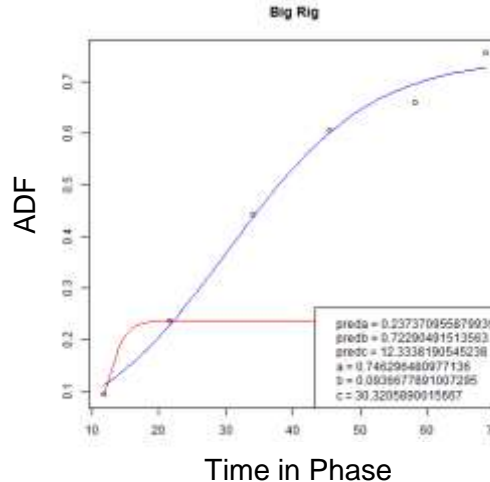

Azure ML Predicts Accurate Transition Time

Benchmark: Measure accuracy against a standard (based on historical data)

Predict: use 2 early densities to estimate transition time

Refine: base predictions on brand for greater accuracy

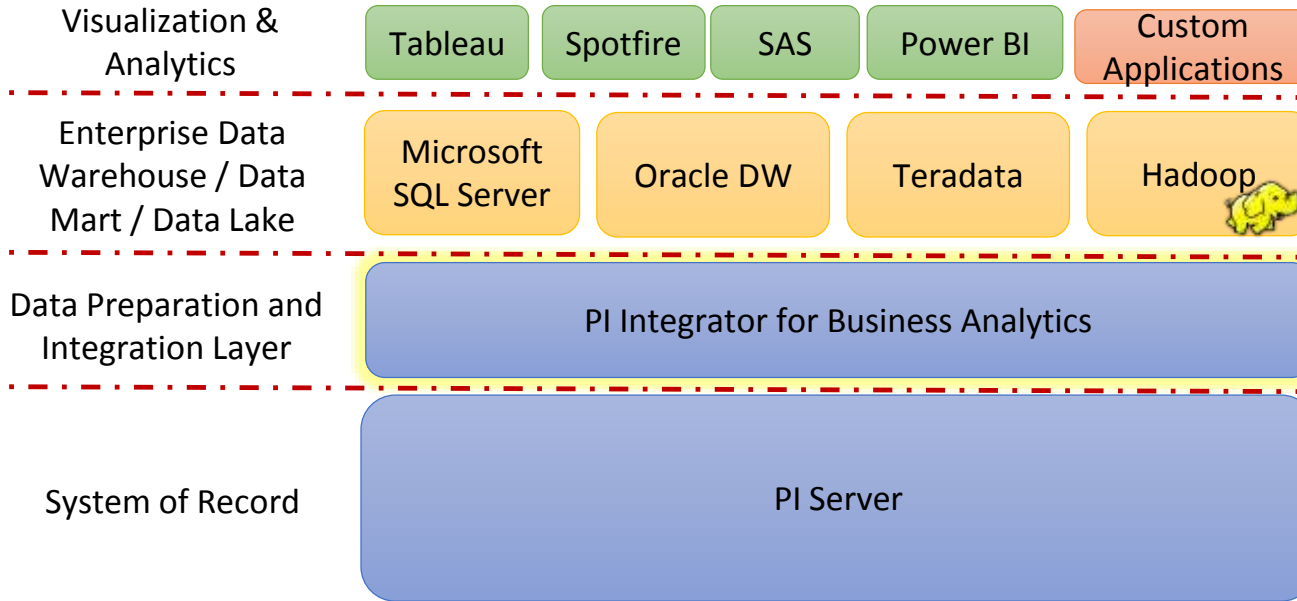

You can see Tim & Brian do this talk

- Go to [OSIsoft.com](https://www.osisoft.com)
- Select Events / Past Events / Event Presentations
- Select EMEA 2016 Berlin
- Look for “Reducing Beer Production Time with Predictions”

Tim Alexander – Assistant Brewmaster – Data Wrangler
Brian Faivre - Brewmaster

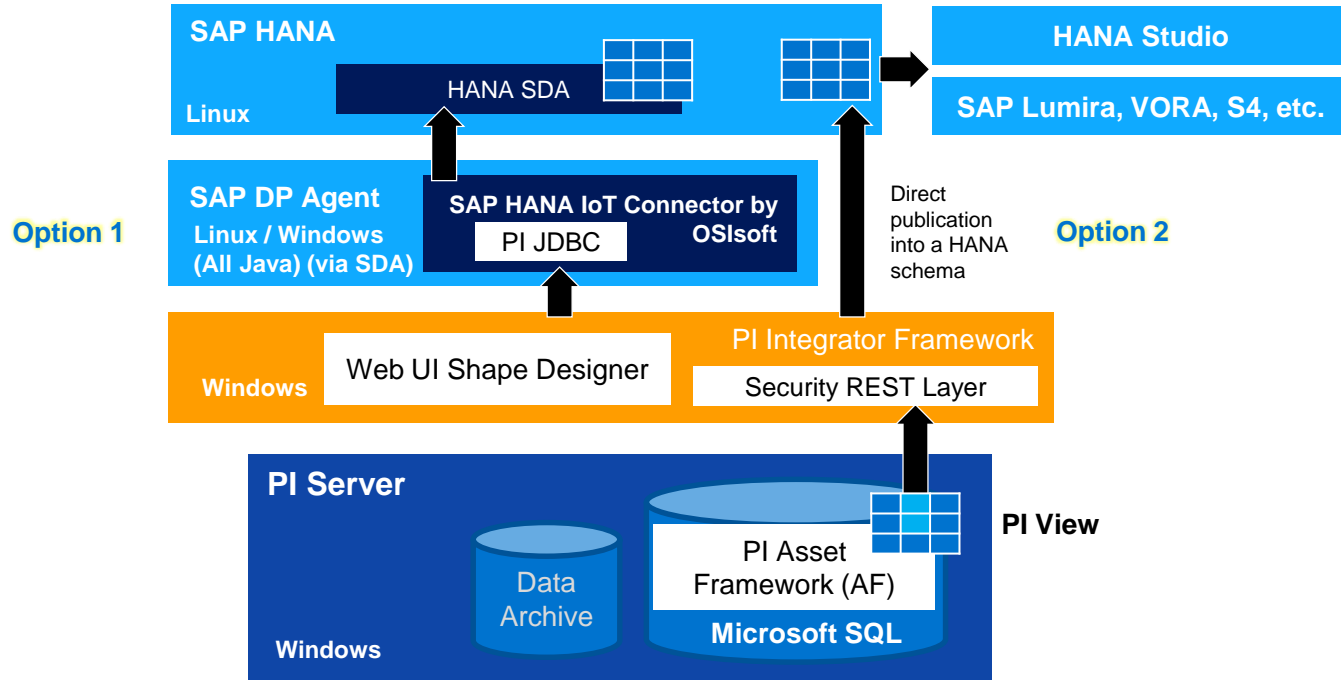

Enterprise Data Warehouse Architecture

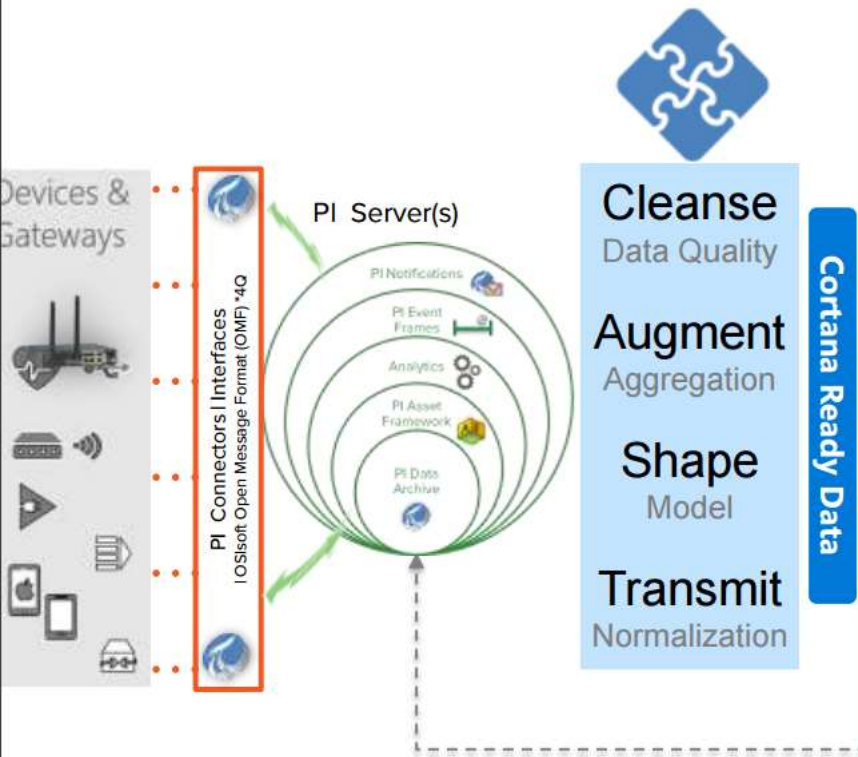

“I need to fit operational data into my existing company IT information architecture!”
