

Team AquaFu (Aperio)

Data Science on Water Data

Analysis of water quality problems - a challenge

- Water Quality sensors,
Flow sensors
- Sensors of different types
on different pipes.
- Unlabeled data.

Tools

Python - Pandas, scikit-learn, jupyter notebook

Python - OSISOFT PI Web API library (written by Marcos Loeff)

Elasticsearch + Kibana. Python code written to Export PI to Elasticsearch

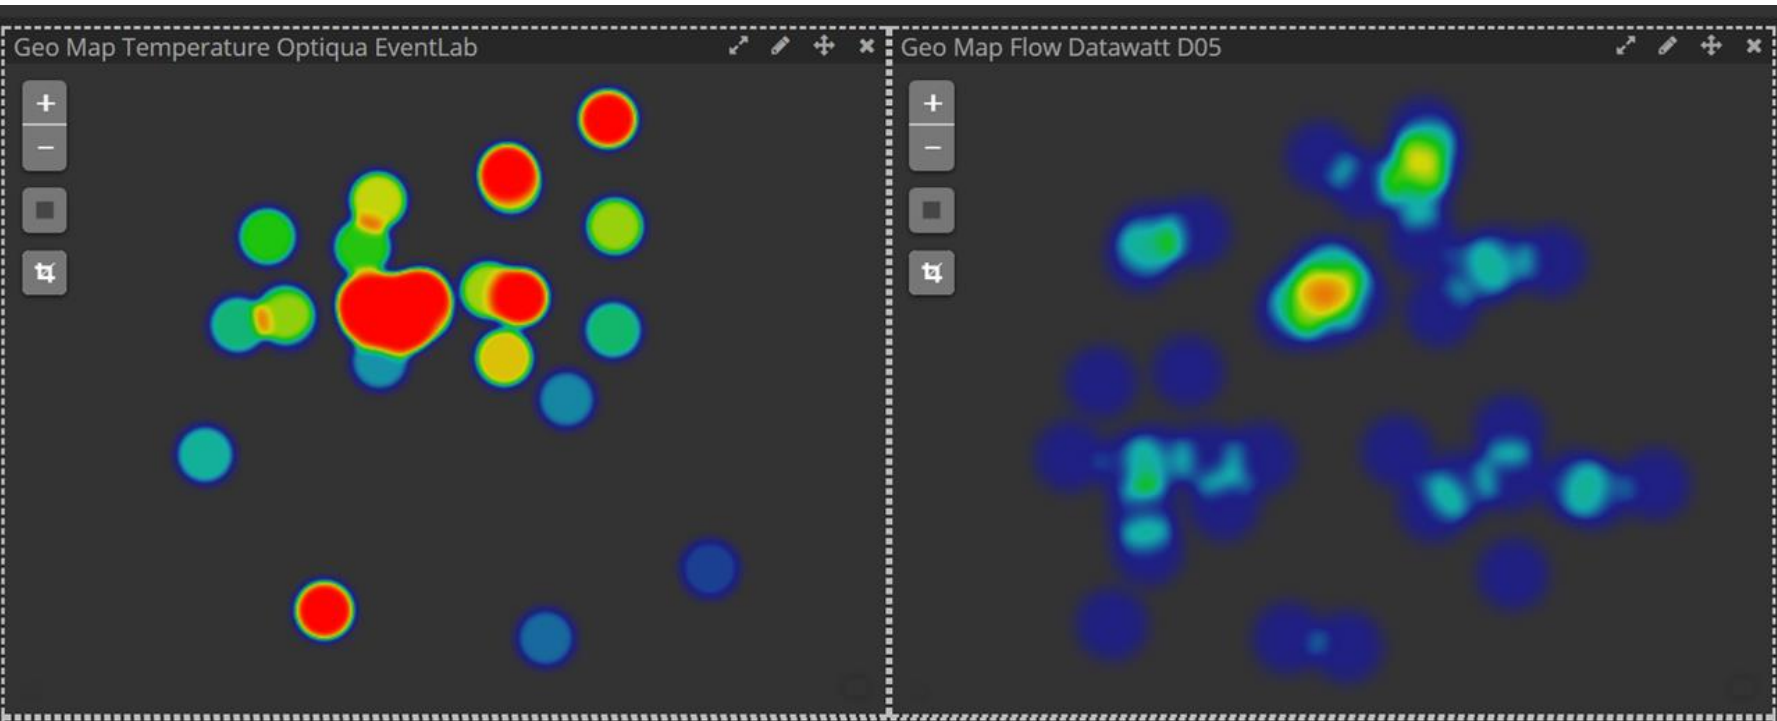

Correlate the Flow Rate & Temperature vs Dist (km)

Correlate the Water Quality (Optical Refraction)

Distance - km

Water Environment for **Smart Technology**

https://sw4eu.com/vitens_real_time_map_production/

The image shows a screenshot of a web-based real-time map application. The map displays a geographical area with various cities and regions, including Almere, Harderwijk, Amersfoort, Utrecht, Zeist, Nieuwegein, Veenendaal, Ede, Arnhem, Deventer, Apeldoorn, Driebergen, and Nijmegen. A large orange-shaded area is visible in the eastern part of the map, near Deventer and Apeldoorn. The interface includes a search bar at the top right with the text "Adres of plaats zoeken", a scale bar at the bottom left, and a list of map layers on the left side. Two large black icons, a telephone handset and a Twitter bird, have arrows pointing towards the map interface.

Live Demonstration

Near Real-Time feedback for customer as a “reward”.

Behaviour based messaging.

Enrich existing data with a new source of consumer feedback and telemetry data.

Low cost and higher benefit to Vitens

- More rapid
- More consistent
- Less variable dataset

Modular and configurable based on where deployed in the water network.

Mobile solution – can be deployed multiple times, moved around the water network.

	Phone Call	Social Media	Dash Button
Customer Experience	<p>Not easy.</p> <p>Time Consuming.</p> <p>Reluctance/inconvenient.</p>	<p>More attractive, easier than phone call.</p> <p>Some generations may struggle with this approach.</p>	<p>Simple, quick, easy.</p> <p>Convenient.</p> <p>Feels more connected.</p> <p>Physical presence.</p>
Vitens	<p>Staff for call centre.</p> <p>Flood or drought – in terms of calls.</p> <p>Variable/inconsistent feedback on issue.</p>	<p>Potential negative impact on Vitens – social trending of bad issues.</p> <p>Semi-automated feedback processing.</p> <p>Variable/inconsistent feedback on issue.</p>	<p>Instant feedback.</p> <p>Automated processing.</p> <p>Consistent telemetry data.</p>

PyVision

Advanced Anomaly Detection for Water Quality Monitoring

What

- Replace the monitor lizard
- Advanced Anomaly Detection at all locations
- Automatically create alarms & notifications

Why

- Ensuring reliable service
- Enabling faster maintenance response
- Reduce likelihood of false alarms by combining multiple sensors

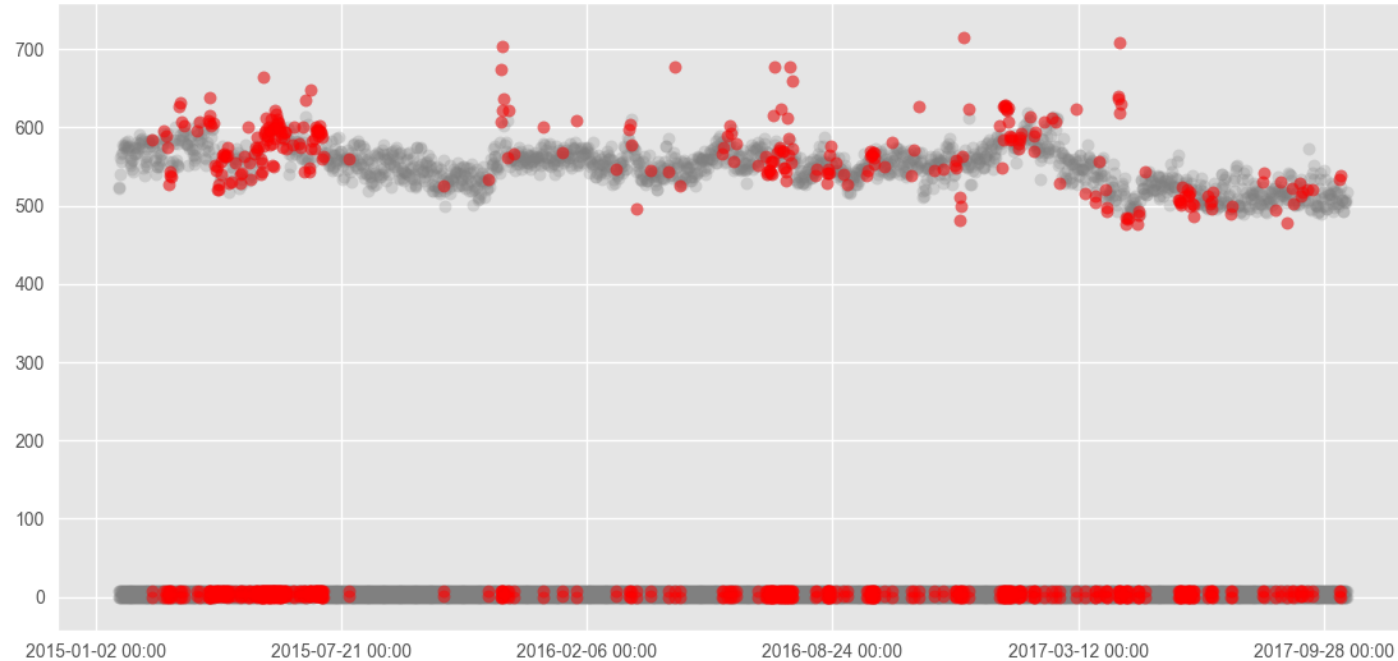

How

- HDBSCAN (hierarchical density-based spatial clustering w/ noise)
- Looking for spatial density-adaptive outliers in multiple dimensions

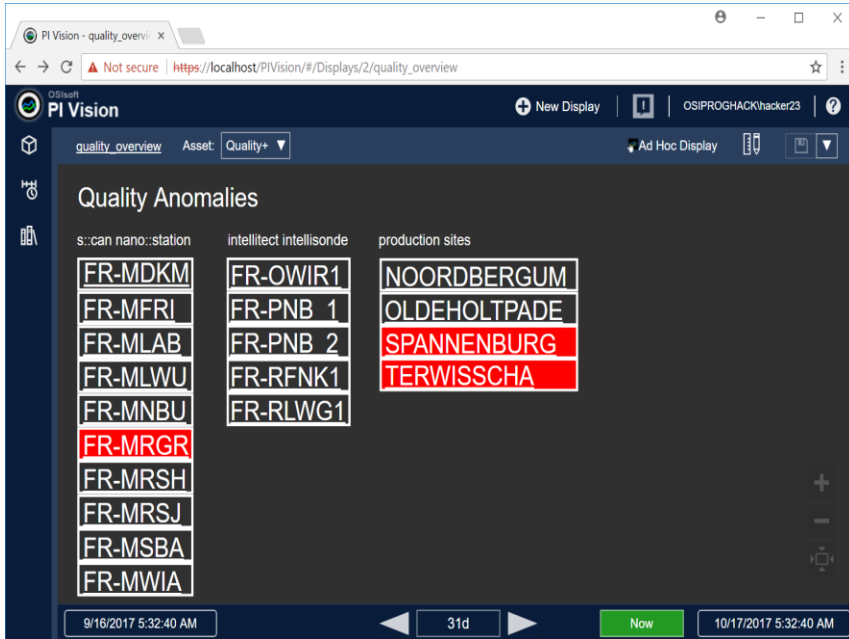

Production Site Noordbergum - conductivity

Production Site Noordbergum – pH & turbidity

By categorizing issues / anomalies not just to operative events but public events too (e.g. football, vacation) is it possible to predict data anomalies by just checking the calendar?

How this will help

- A connected system provides a better overview and enables a seamless workflow by having systems integrated
- Using existing powerful tools to prevent implementation of things that already exist (e.g. Cortana Intelligence Gallery)
- Enabling data exploration by using Tableau for visualization
- Interaction with the system in a new way (Alexa)
- Saving costs predicting events faster and assigning field forces at the right time

Thanks

E.ON Climate & Renewables - ConnectPoint

E.ON is an international, privately-owned energy supplier focused on 3 areas:

- Renewables
- Energy networks
- Customer solutions

It operates in over 30 countries and serves over 33 million customers.

The Company employs above 50 000 people world-wide and annually achieves revenues above 100 billions Euro.

E.ON Climate & Renewables (EC&R), headquartered in Essen, Germany, is responsible for E.ON's industrial-scale renewable energy activities.

EC&R develops, builds

ConnectPoint is a Software vendor and System Integrator specialized in Utility & Industry sector

The company is present in Poland and Germany with the team of experienced professional in **IT/OT integration and SW development**

ConnectPoint started co-operation with E.ON Climate & Renewables in 2013 and since that time the company conducted above 20 projects in areas like

- Custom Software development
- System Integration in IT/OT area
- Business Intelligence applications development (e.g. OSIsoft PI)

Find out more.

If you would like to find out more about how ConnectPoint can help transform your utility service with intelligent network capability, get in touch with
