

Streaming IoT Analytics with the PI Integrator for Azure, Cortana Intelligence and Azure IoT

Presented by Prabal Acharyya
Landry Khounlavong

Agenda

- 1 IoT Analytics Challenges
- 2 Cortana Intelligence and Power BI
- 3 PI Integrator for Microsoft Azure & Red Carpet Incubation Program (RCIP)
- 4 Call to Action

Typical Planning for Data Science Experiments

80% WASTED TIME

Analysts spend vast majority of time preparing data, not analyzing data.

"Data scientists spend up to 80 percent of their time wrestling with the data rather than generating new business insights."

—NEW YORK TIMES

Data Scientist: *The Sexiest Job of the 21st Century*

Meet the people who can coax treasure out of messy, unstructured data.
by Thomas H. Davenport and D.J. Patil

When Jonathan Goldman arrived for work in June 2006 at LinkedIn, the business networking site, the place still felt like a start-up. The company had just under 8 million accounts, and the number was growing quickly as existing members invited their friends and colleagues to join. But users weren't seeking out connections with the people who were already on the site at the rate executives had expected. Something was apparently missing in the social experience. As one LinkedIn manager put it, "It was like arriving at a conference reception and realizing you don't know anyone. So you just stand in the corner sipping your drink—and you probably leave early."

Data Scientists perform too much Data janitor-work

OSIsoft and Microsoft: Joint Value

Observed advance analytics goals

- Augment decision making with data
- Minimize work needed to begin analyzing
- Invest in out-of-the-box, reusable capabilities for advanced analytics
- Prove advanced analytics can achieve a business outcome

Challenge: making sense of the data

Solution: PI System

Crude Desalter

Operating Pressure: 110 psi
Charge Rate: 14 gph
Mix Valve Pressure: 8 psi
Water Rate: 8%

Weather Conditions

Relative Humidity: 34%
Current Temp: 85 F
High: 92
Low: 57 F
Wind: 8 mph/N

Crude Furnace

Draft Pressure: -0.5 WC
Stack Temp: 316 F
Oxygen: 2.5%
Outlet Temp: 840 F
Cold Oil Velocity: 6 ft/sec

PI System stores and organizes data

Challenge: cleaning & preparing sensor-based data

Solution: PI Integrator for Microsoft Azure

Challenge: implementing data science experiments

Quick deployment
of resources

Off-the-shelf
data science tools

Solution: Cortana Intelligence Suite

Leveraging the PI System and Cortana Intelligence to Increase Process Efficiency

COMPANY and GOAL

Deschutes Brewery is the 7th largest craft brewery in US, and wanted to maximize production with its existing infrastructure to fund construction of a 2nd brewery in Roanoke, VA

CHALLENGE

Batch's phase transition happens between manual density measurements occurring every 8-10 hours

- Impact: Losing up to 72 hours in production time

SOLUTION

Use data science to achieve accurate predictive analytics for determining a batch's density measurements

- PI System
- PI Integrator for Microsoft Azure
- SQL Data Warehouse
- Azure Machine Learning
- Azure Data Factory

RESULTS

Ability to eliminate production time losses and increase production capacity

- Accurate predictions of when a batch's phase transitions from fermentation to free rise

An example of how to operationalize predictions

Bridging the PI System and Microsoft Azure

Announcing

Red Carpet Incubation Program (RCIP)

a limited service offering
alongside Microsoft
that uses a process
to accelerate advanced analytics projects
for selected customers

Asset

Which asset performs best?

Which conditions are optimal?

What are the indicators of failure?

What leads to unsafe conditions?

What causes quality issues?

High Value Insights Require Data Context

Asking How & Why: PI Event Frames easily identifies events for deeper root cause analysis

- The most powerful way to automatically bookmark PI time-series data
- More meaningful use for engineers and business users
- Easier to find, analyze, and report on

Event Attribute	Value
