How Corralling Operational Technology in PI Improved Operational Awareness at UMD

Don Hill, UMCP, Assistant Director, Engineering and Energy Facilities Performance
Dave Shaughnessy, UMCP, Assistant Director, Utilities
Kelsey Bobeck, DSA Inc, OSIsoft Implementation Lead

August 21st, 2018

Agenda

- About the University of Maryland, College Park (UMCP)
- Our Use Cases: Challenges, Solutions, and Results
 - Inconsistent data access
 - Delayed outage response
 - No distribution system awareness
 - Over-conditioning of classrooms
- What's Next

University of Maryland, College Park (UMCP)

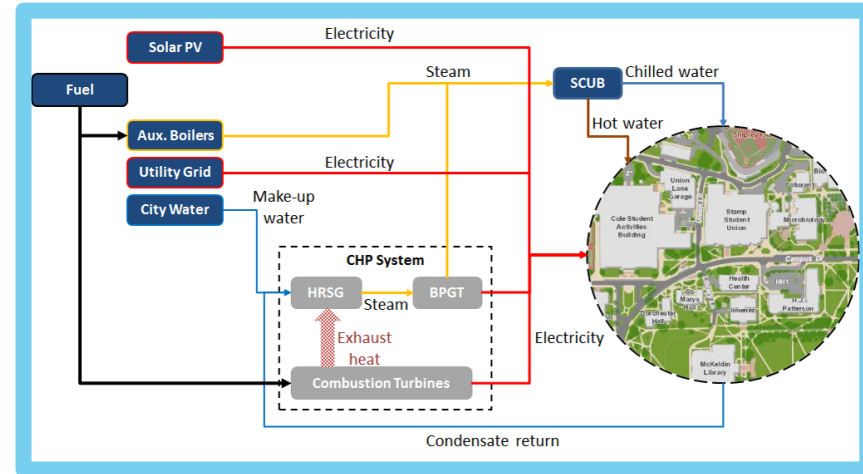

Campus Energy Production

- Combined Steam and Power Plant
 - 27 MW of electricity
 - 280,000 lbs. of 125 psi steam per hour
- 32,000 tons of Chilled Water generation at 15 plants
- 2.5 MW solar array

District Energy System

- 1,340 acre Main Campus
- Electric, Steam, Chilled Water
- 10 Electrical Feeder Loops
- 15 miles of underground steam and chilled water piping

Challenges for UMCP

Inconsistent Access to Data

No remote access to CHP plant data

Disparate campus monitoring systems

Delayed awareness of loss of data feed

Delayed Outage Response

Not aware of outage until customer calls CRC

No insight into extent of outage

Have to visit each building individually to know status

No Distribution System Awareness

Static CAD drawings

No insight into “hotspots”

Data access impractical or non-existent

Reduce Classroom Conditioning

Manual scheduling

Overuse of equipment

Unnecessary energy use

Challenge: Inconsistent Access to Data

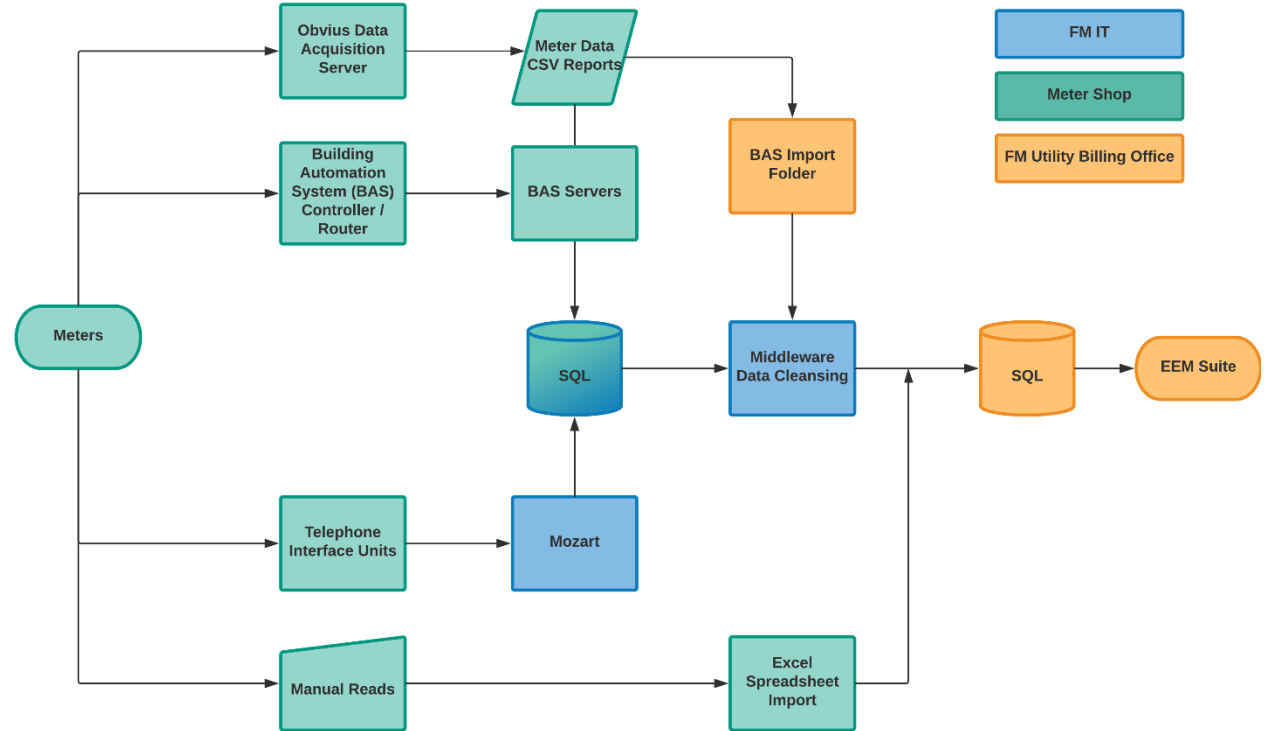

Inconsistent Access to Data

No remote access to CHP plant data

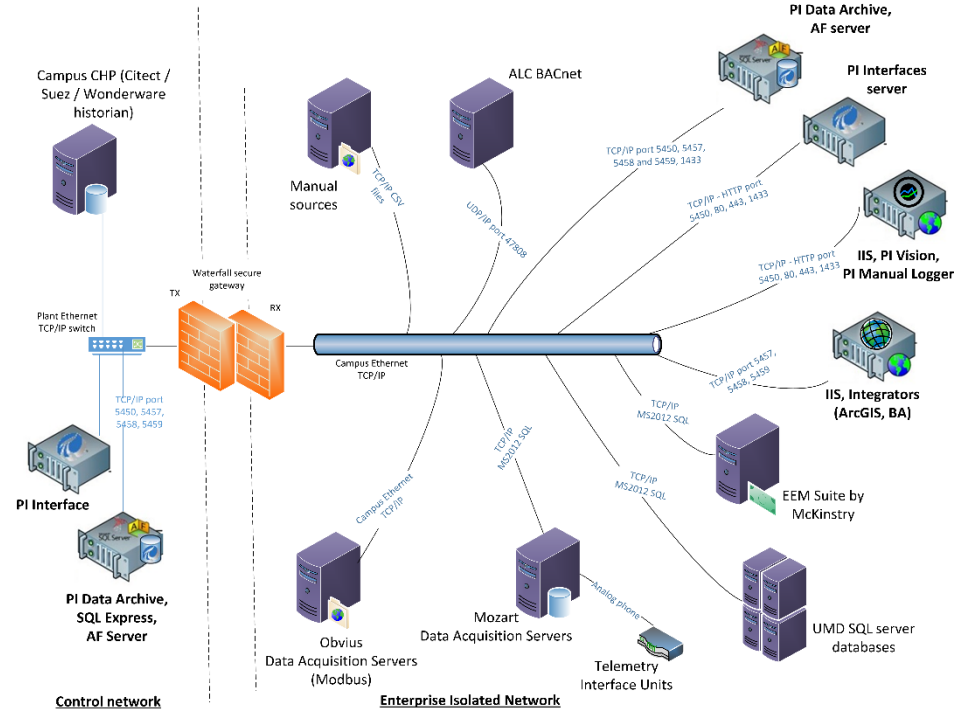

Disparate campus monitoring systems

Delayed awareness of loss of data feed

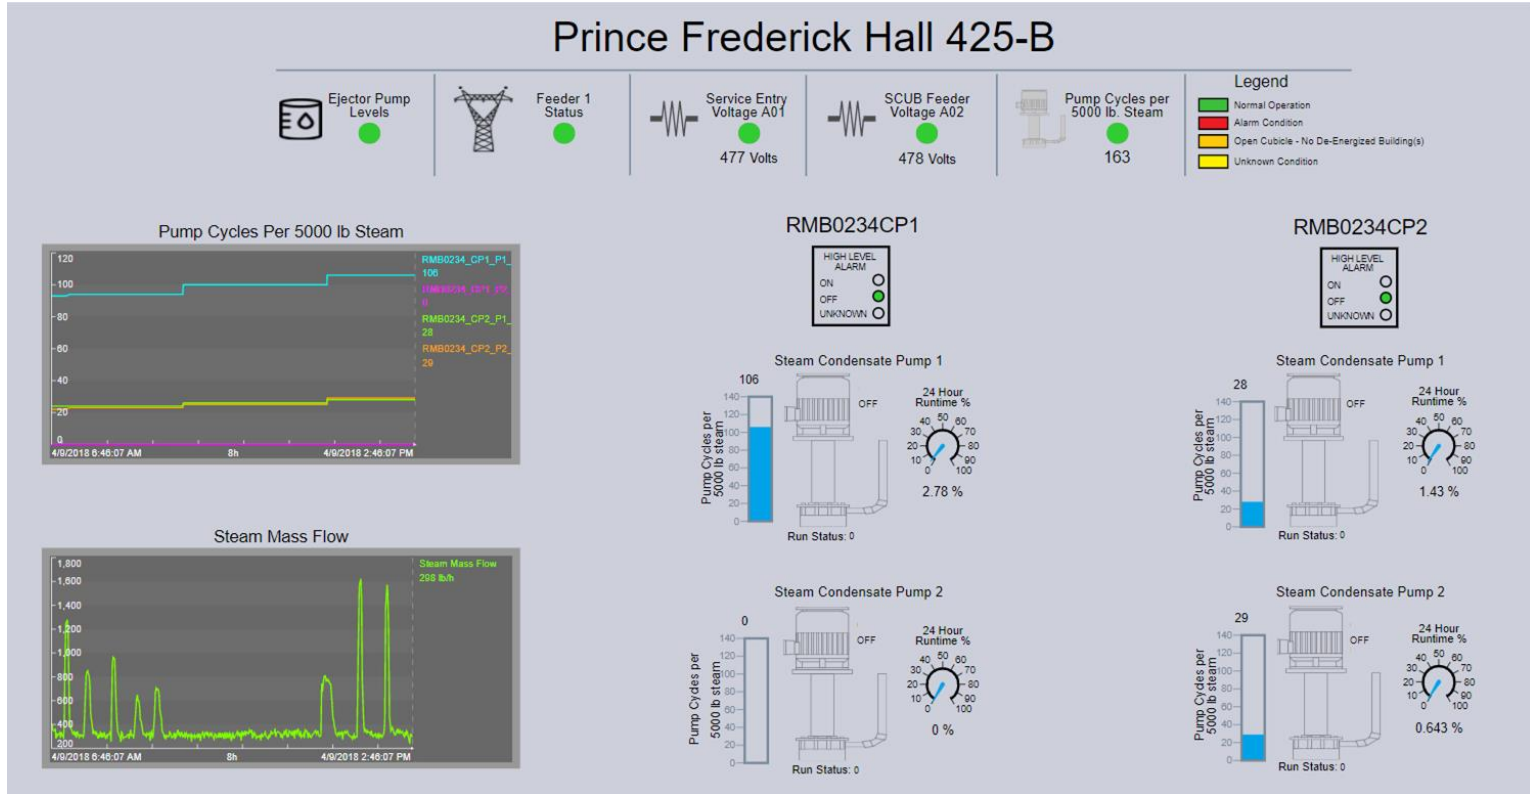

Solution: Secure, Centralized Data

- Waterfall Secure Gateway
- 5 different interfaces
- PI Manual Logger
- Daily tag reports

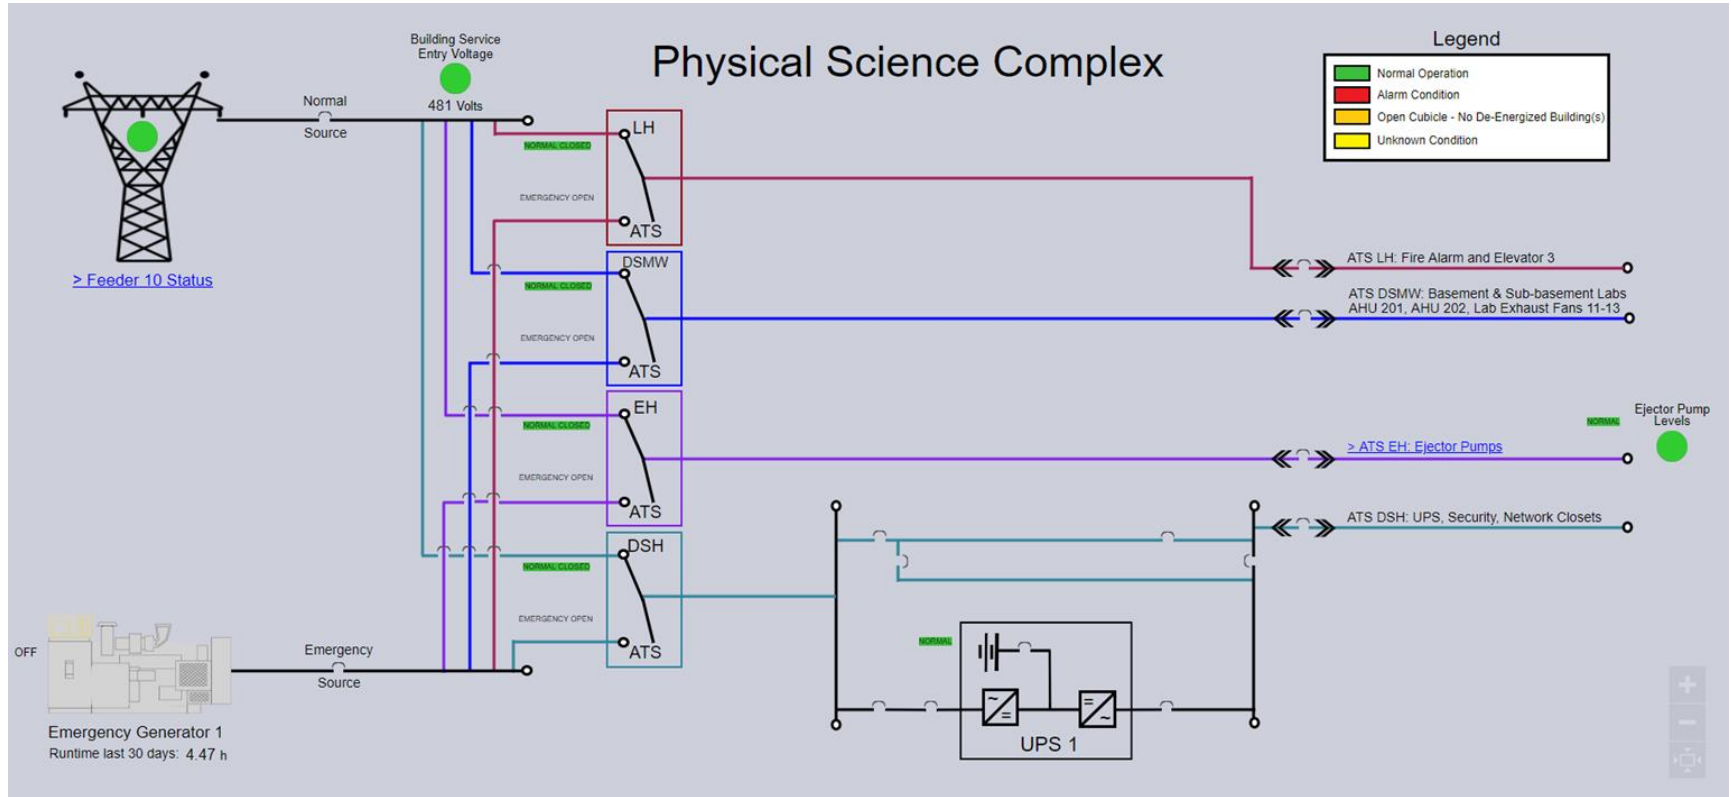

Result 1: Cost Avoidance through Unified Insight

Pump Overview Screen

Result 2: "Single Pane of Glass" Views

ATS Monitoring Screen

Challenge: Delayed Outage Response

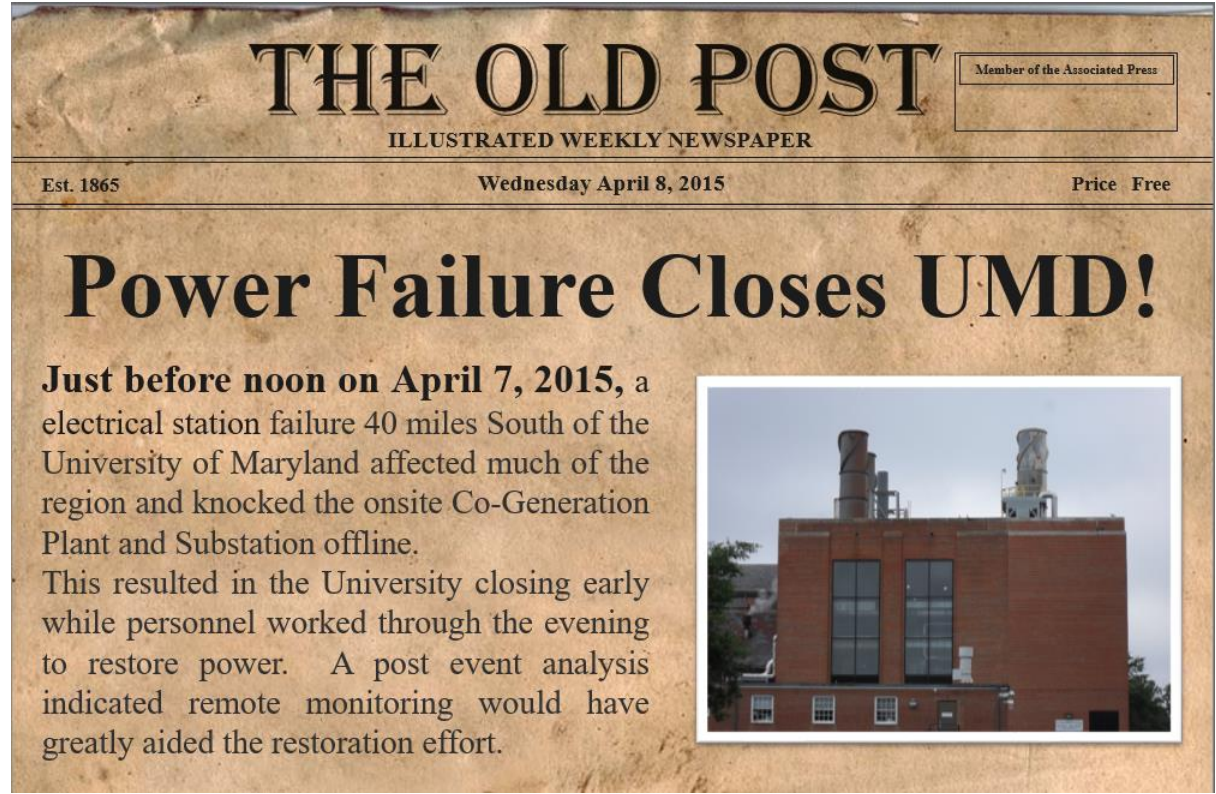

Delayed Outage Response

Not aware of outage until customer calls CRC

No insight into extent of outage

Have to visit each building individually to know status

Power Failure Closes UMD!

Just before noon on April 7, 2015, a electrical station failure 40 miles South of the University of Maryland affected much of the region and knocked the onsite Co-Generation Plant and Substation offline.

This resulted in the University closing early while personnel worked through the evening to restore power. A post event analysis indicated remote monitoring would have greatly aided the restoration effort.

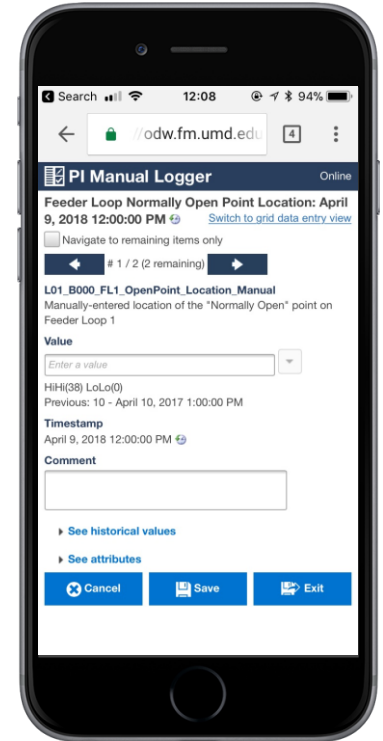

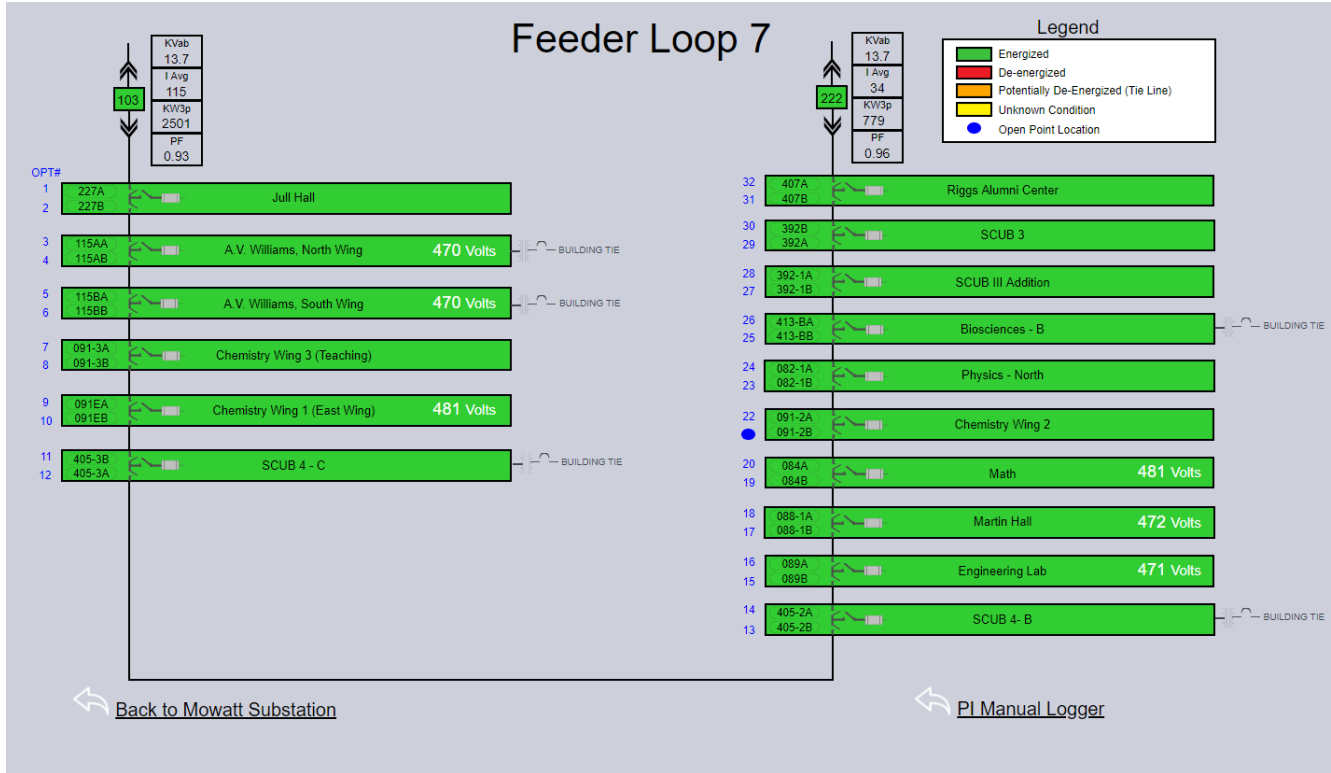

Result 1: Up to 90-minute Head Start

Feeder Loop Overview Screen

Result 2: Accurate Data on Affected Buildings

Feeder Loop Drill-down Screen

Residents without Electricity

Legend

Overall Building Status

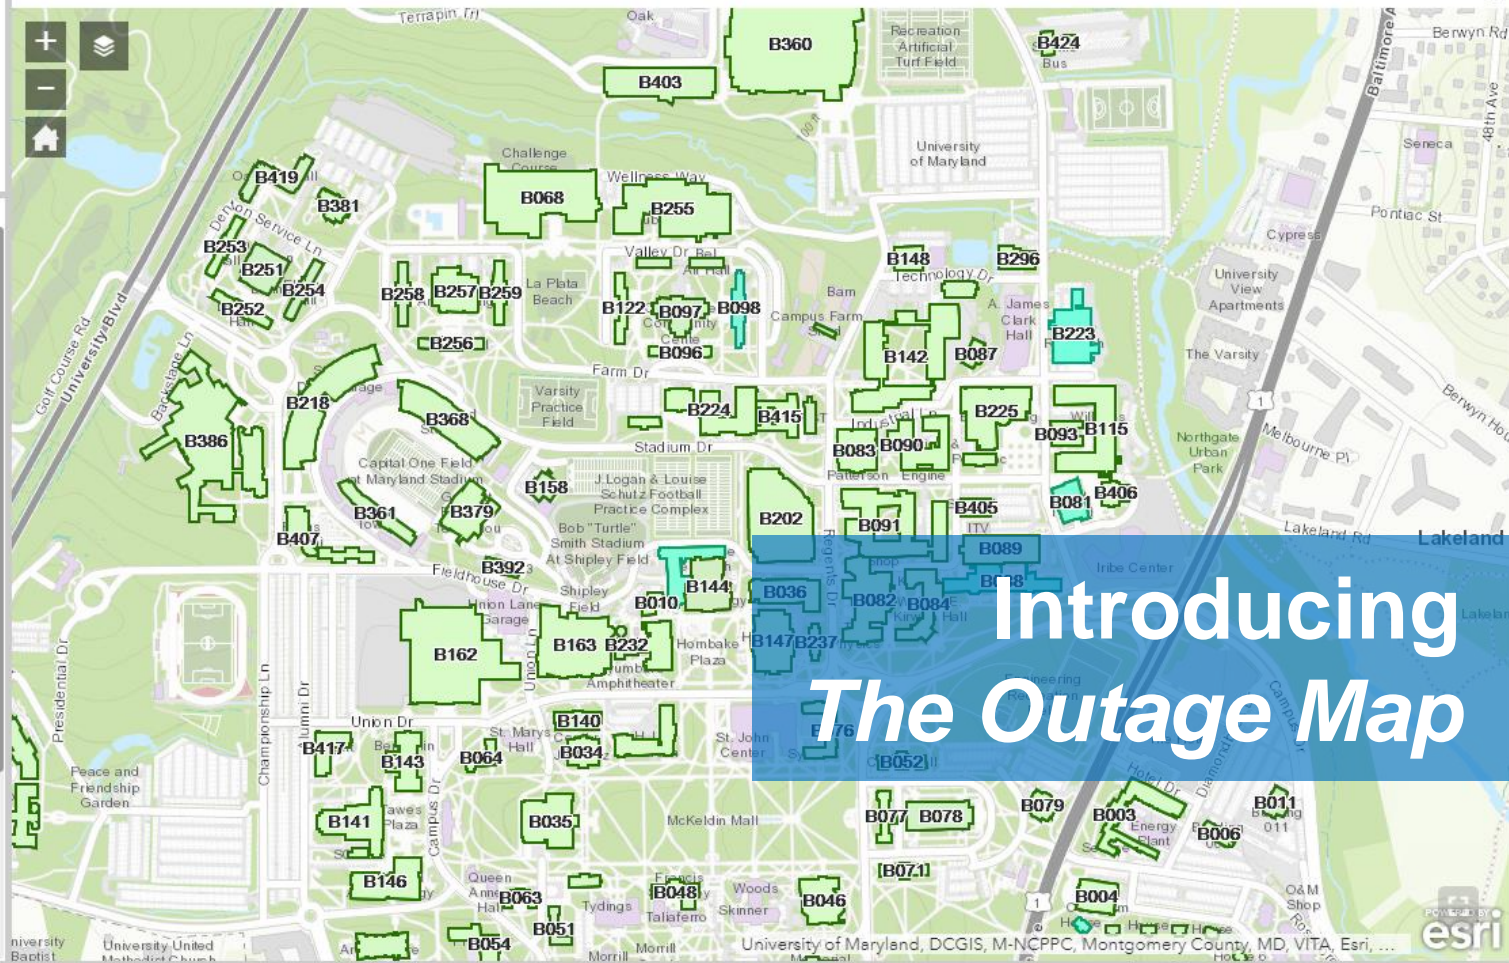

- Receiving All Commodities
- Not Receiving Any Commodities
- Receiving Partial Commodities
- Unknown

Electric Status

- Energized
- De-Energized
- N/A
- Unknown

Steam Status

- Receiving Steam
- Possible Use of Steam Boiler
- Not Receiving Steam
- N/A
- Unknown

**Introducing
The Outage Map**

Challenge: No Distribution System Awareness

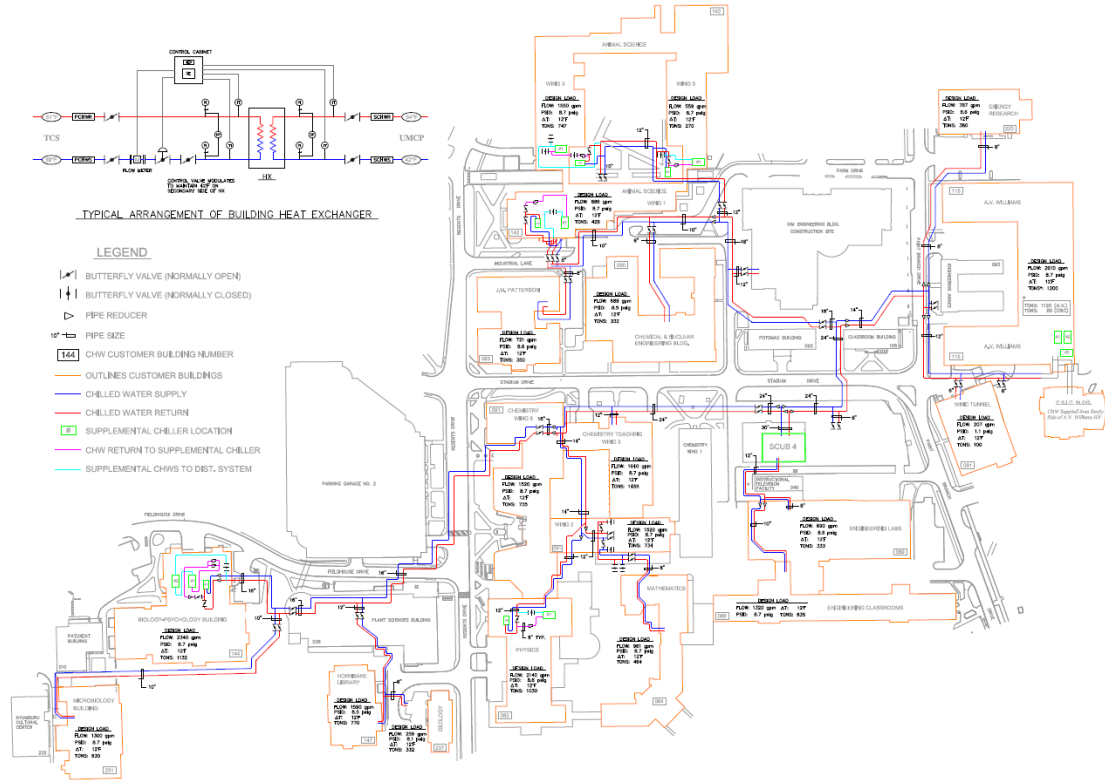

No Distribution System Awareness

Static CAD drawings

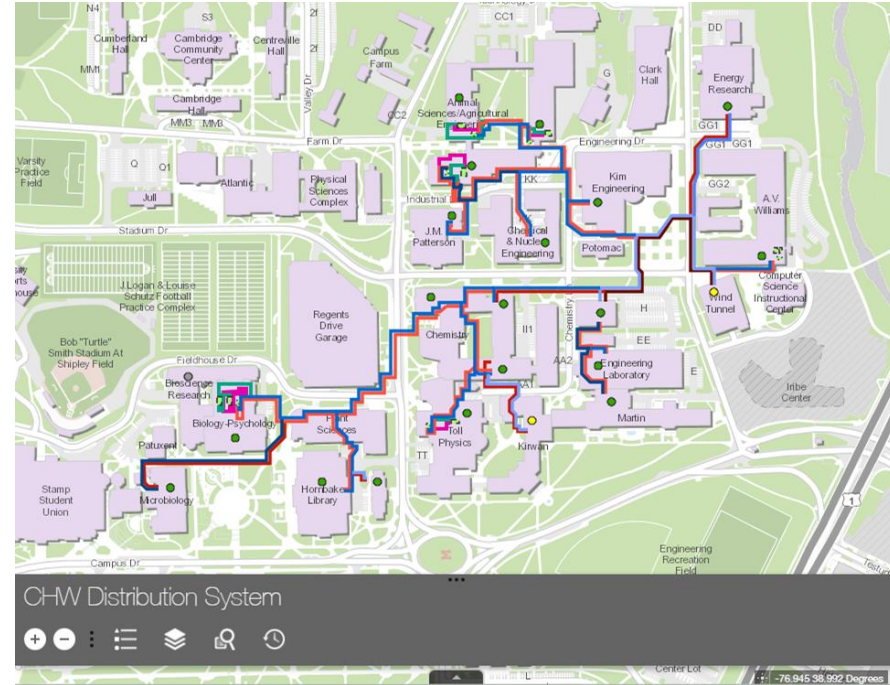

No insight into “hotspots”

Data access impractical or non-existent

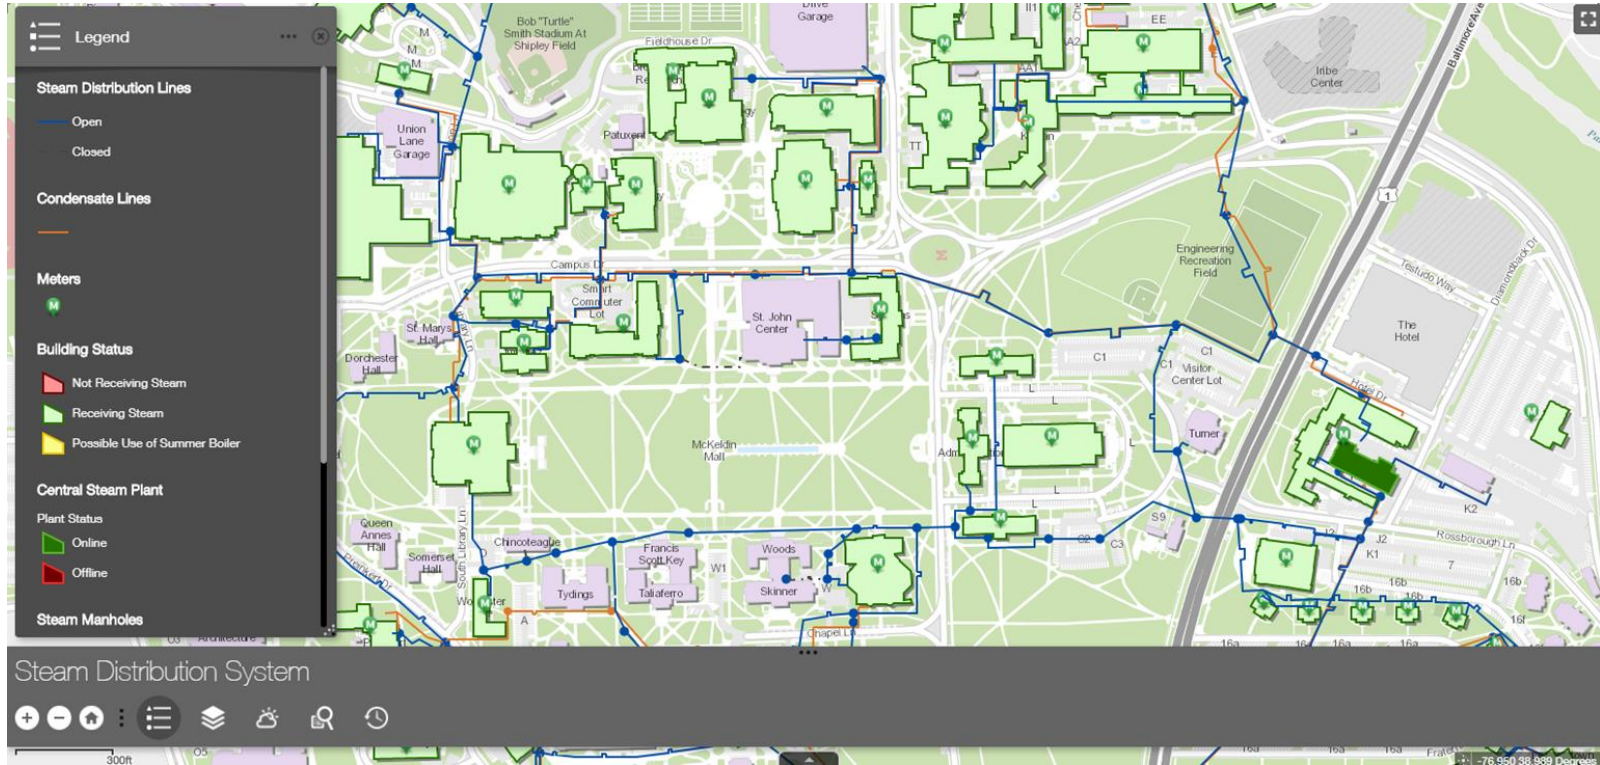

Solution: Multi-Platform Awareness

- PI Integrator for Esri® ArcGIS®
 - Transformed CAD drawings
 - Enriched layers with data
 - Created ArcGIS® WebApps
- PI Vision-based drill-downs

Chilled Water Distribution ArcGIS® WebApp

Result: Intuitive Visuals with Actionable Data

Steam Distribution ArcGIS® WebApp

Challenge: Reduce Classroom Conditioning

Reduce Classroom Conditioning

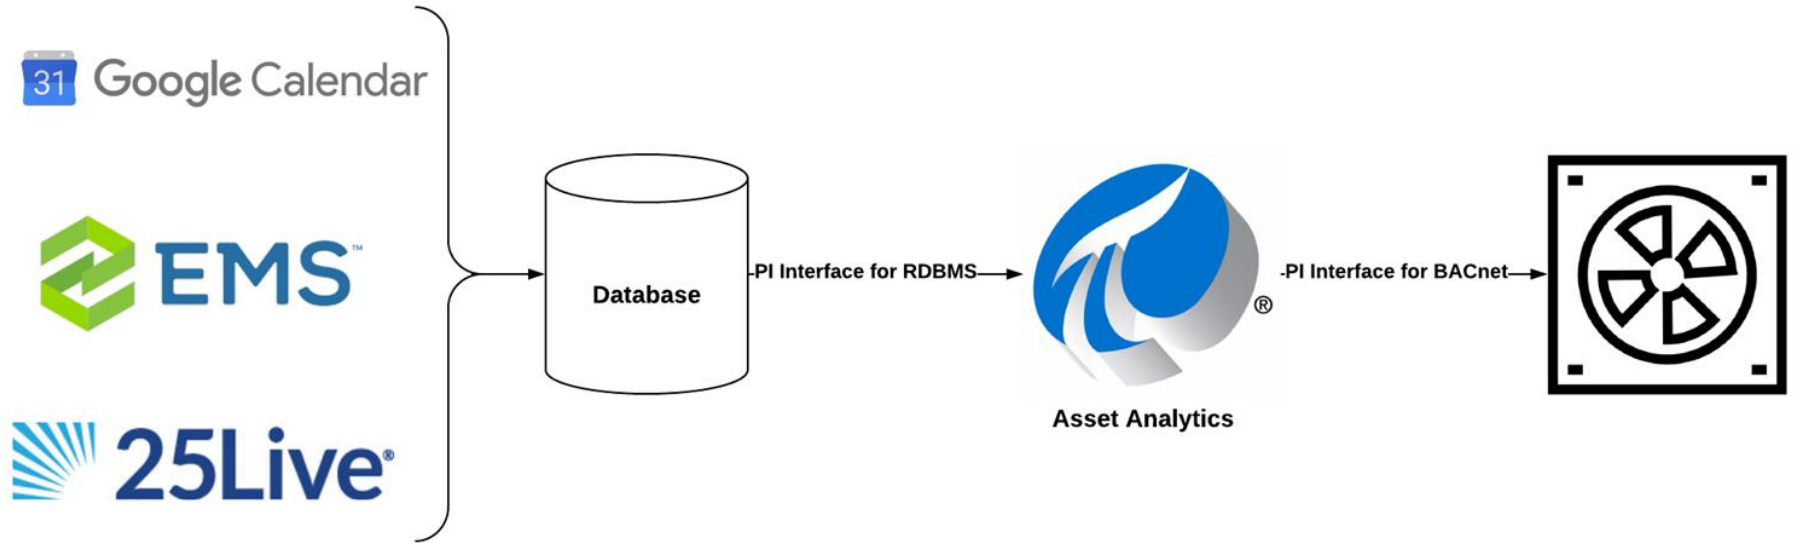

Manual scheduling

Overuse of equipment

Unnecessary energy use

Solution: Smart HVAC Scheduling

Result: Resource Optimization

- Automated scheduling
- Reduced runtime
- Energy savings

Average Savings and Runtime Reduction

Connecting a Campus Infrastructure

COMPANY and GOAL

The University of Maryland, College Park Facilities Managements (FM) aims to continuously improve responsiveness, cost effectiveness, and service quality while meeting or exceeding customer expectations.

CHALLENGE

No real-time operational transparency, causing delayed response and recovery times

- No remote monitoring of CHP Plant, requiring a physical visit
- Highly customized scripts and multiple UIs required to capture and view data from other systems

SOLUTION

Situational Awareness through data centralization, visualization, and analysis using the PI System

- Utilizing 5 interfaces to collect data
- Waterfall Secure Gateway for secure connectivity to Plant data
- PI Vision and Esri ArcGIS® to visualize data

RESULTS

Resource optimization, improved incident response, and empowered FM staff

- Reduced electrical outage response times from up to 90 minutes to almost instantaneous
- Up to \$500,000 annually in cost avoidance from mechanical room flood prevention

What's Next

- ArcGIS® integration of remaining utility grids
- Monitoring of Emergency Power Generation and UPS units
- Smart HVAC Scheduling expansion
- Integration with work order management system
- Building demand forecasting
