

Smart Industrial Concept! Design- and Operational Optimization

Rene Hofmann
Scientific Coordinator SIC!

Worldwide changing energy system

Transformation of the energy supply in industrial systems

Challenges

- Diversification of energy production
- Load flexibilization/sanitization
- Volatility of renewable energy sources
- Consideration of the energy market

Energy-intensive industry – energy supply system

- **Optimal plant operation** → exploit full potential of industrial plants
- **Need for flexible designs** and predictive automation/control concepts

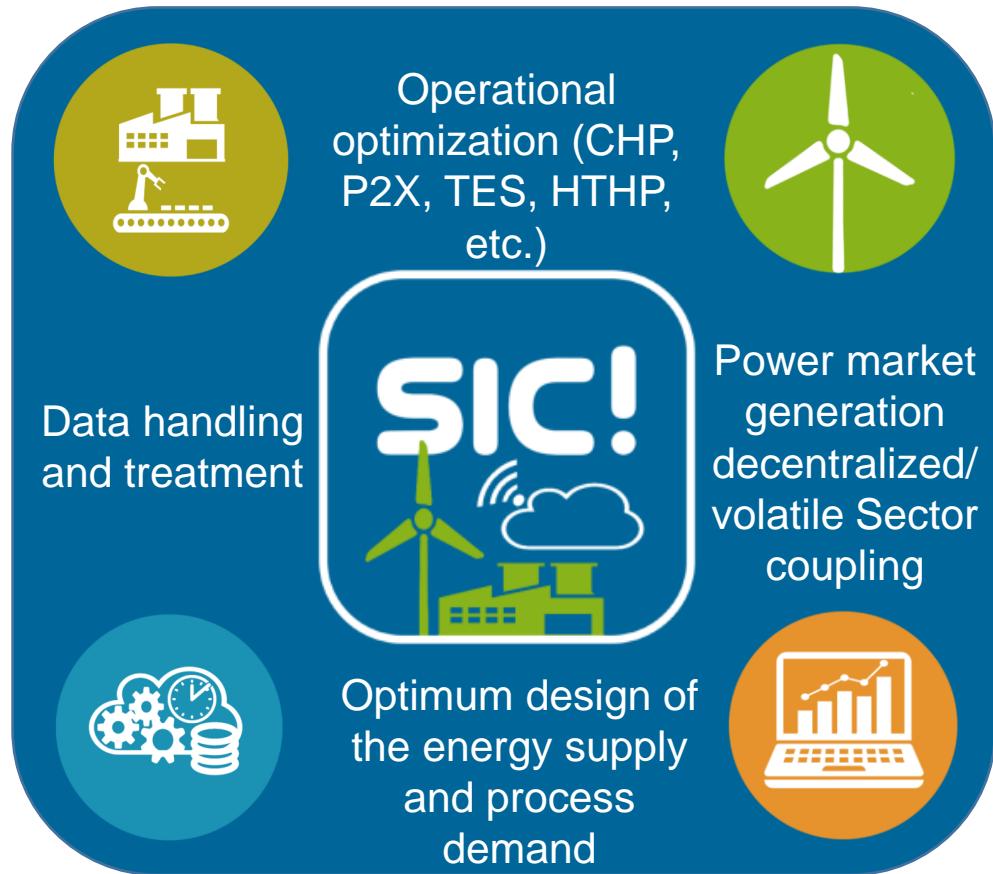

Digital Transformation of the Industrial Energy Supply

Cooperative Doctoral School: SIC!
[Smart Industrial Concept!]-

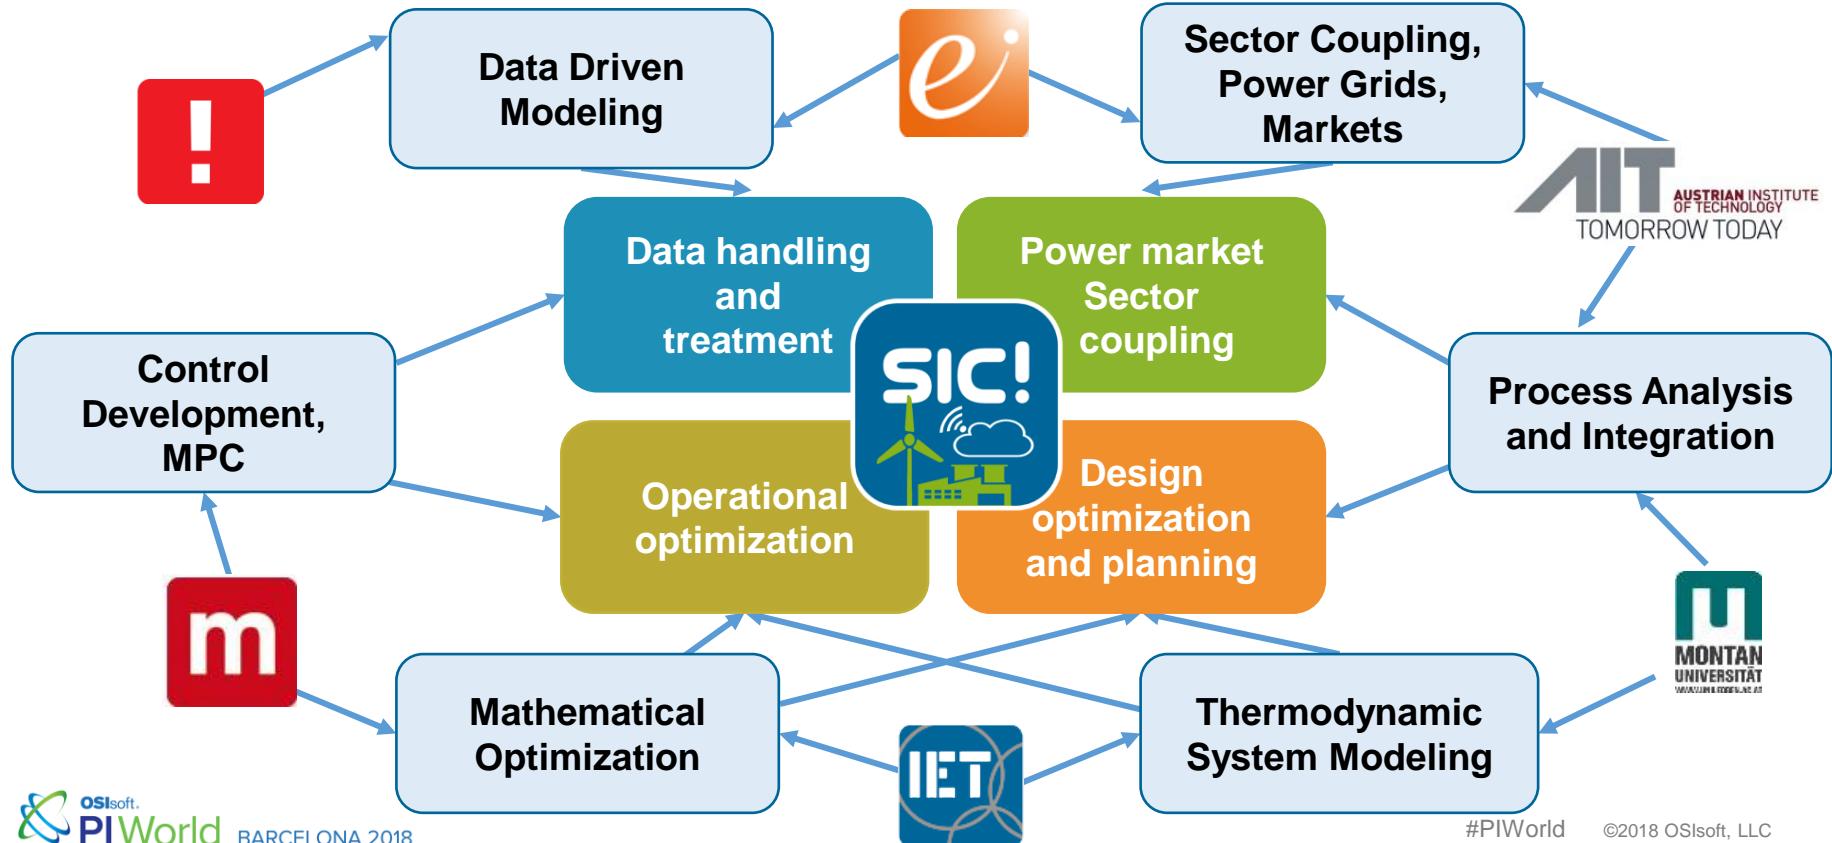

Holistic Approach with Digitalization of Industrial Processes and Applications for 2050 and beyond

SIC! in a Nutshell

- ✓ Added value through specific use of data
- ✓ Development of methods for energy-optimized operation of industrial plants
- ✓ Optimum system design for future environment
- ✓ Consideration of mutual interaction industry ↔ energy networks

Research Competences

SIC! [Smart Industrial Concept] <https://sic.tuwien.ac.at>

Data handling and treatment

Design optimization and planning

Power market sector coupling

Operational optimization

DEMO

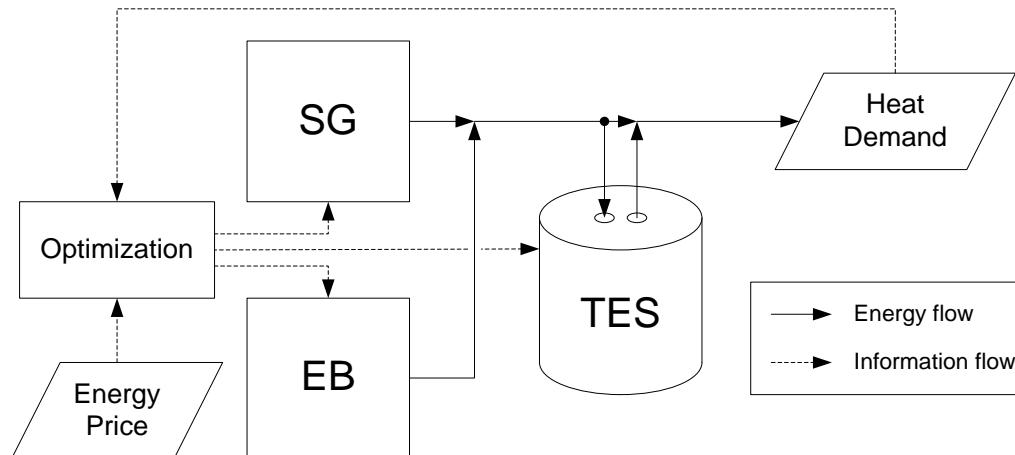

Industrial Flexibilization Concept – Storage Integration

Operational optimization

PhD#3: Operational optimization concepts with integration of storage systems for load flexibilization in the energy-intensive industry

PhD#5: Development of methods to optimally control the supply of energy-intensive industrial processes by integrating waste heat and using components to increase load flexibility

SG: Steam Generator

EB: Electrode Boiler

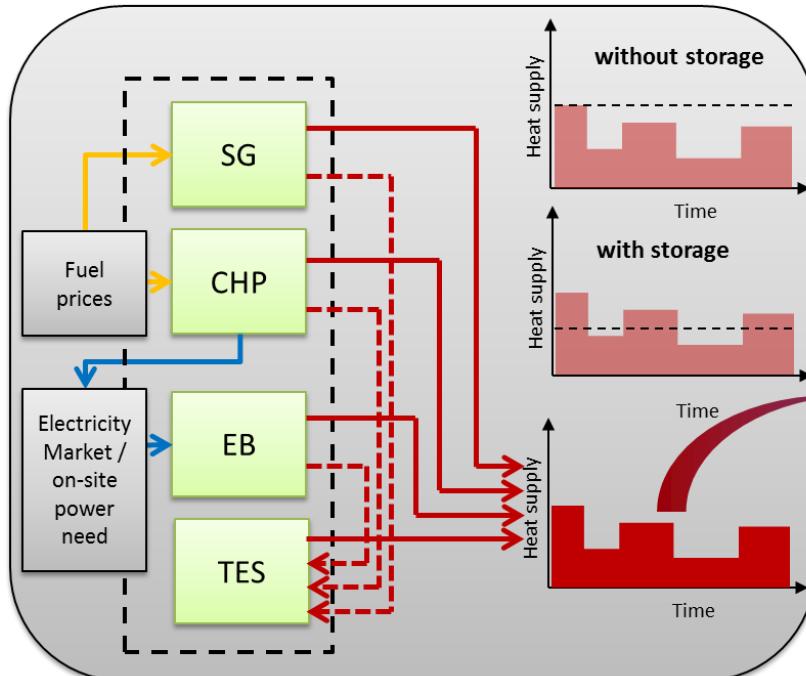

TES: Thermal Energy Storage

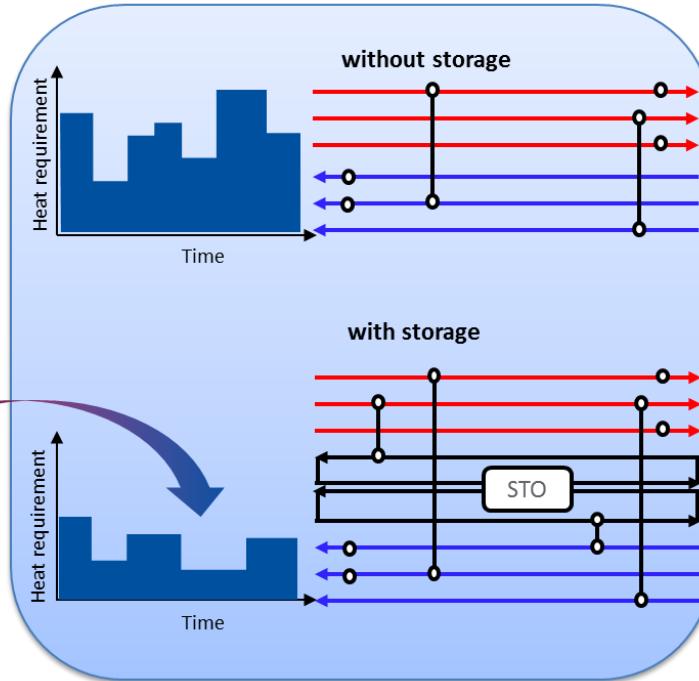

Operational optimization

Intelligent Design/Operational Optimization

Energy Supply System

Industrial Process

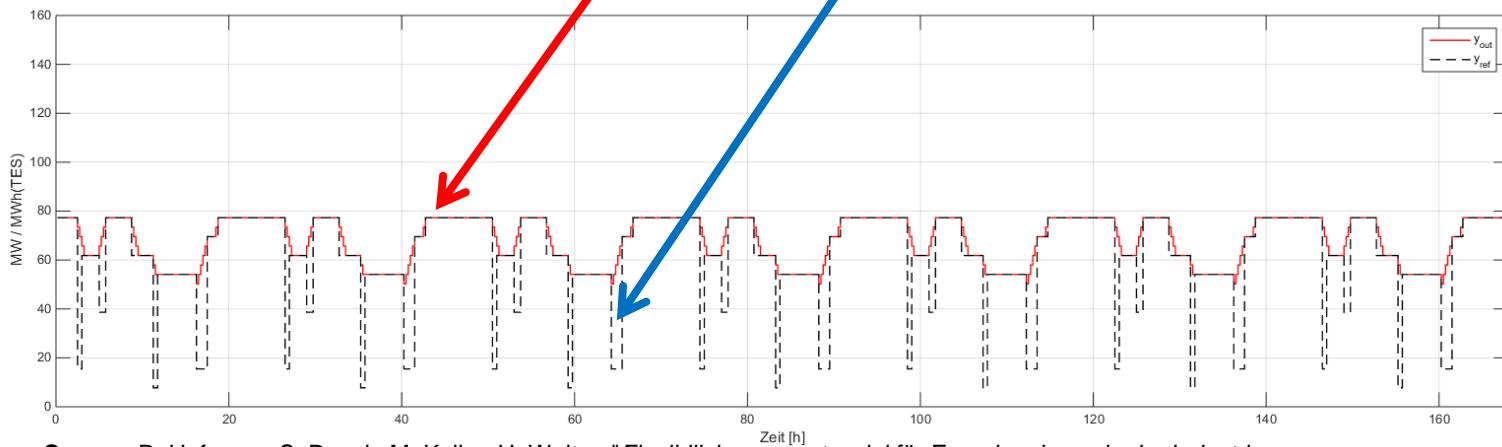

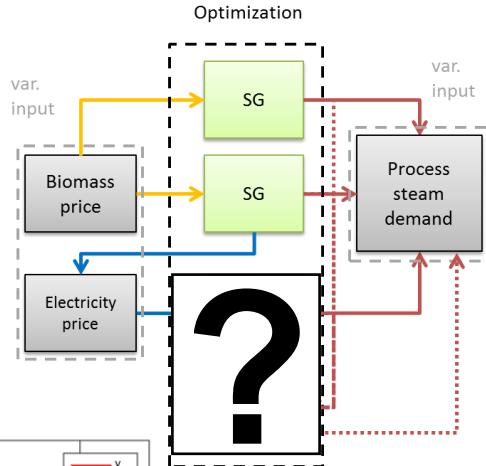

Simple Example

Energy Supply Units

Supply ≠ Demand

Source: R. Hofmann, S. Dusek, M. Koller, H. Walter: "Flexibilisierungspotenzial für Energieanlagen in der Industrie. Intelligentes Demand-Side-Management durch Integration von thermischen Speichern - Teil 1"; BWK, 68 (2016), 9; 6 – 11.

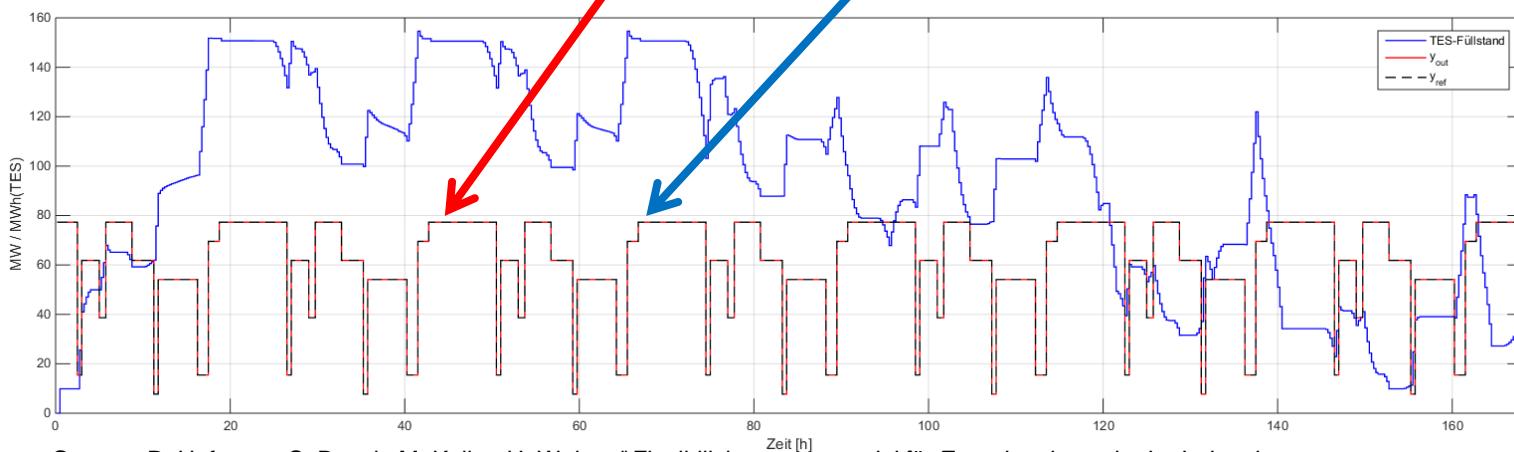

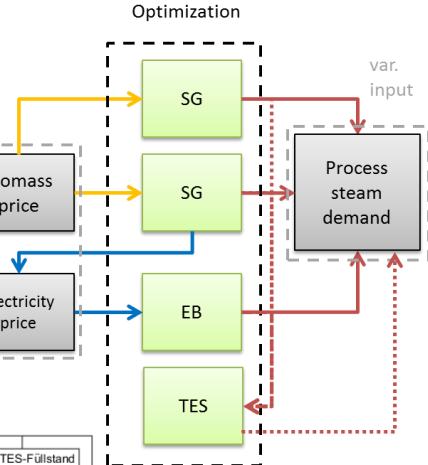

Results

SG: Steam Generator
EB: Electrode Boiler
TES: Thermal Energy Storage

SG + TES + EB

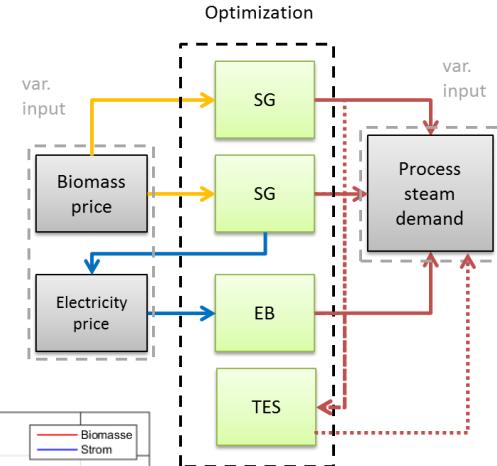

Source: R. Hofmann, S. Dusek, M. Koller, H. Walter: "Flexibilisierungspotenzial für Energieanlagen in der Industrie. Intelligentes Demand-Side-Management durch Integration von thermischen Speichern - Teil 1"; BWK, 68 (2016), 9; 6 – 11.

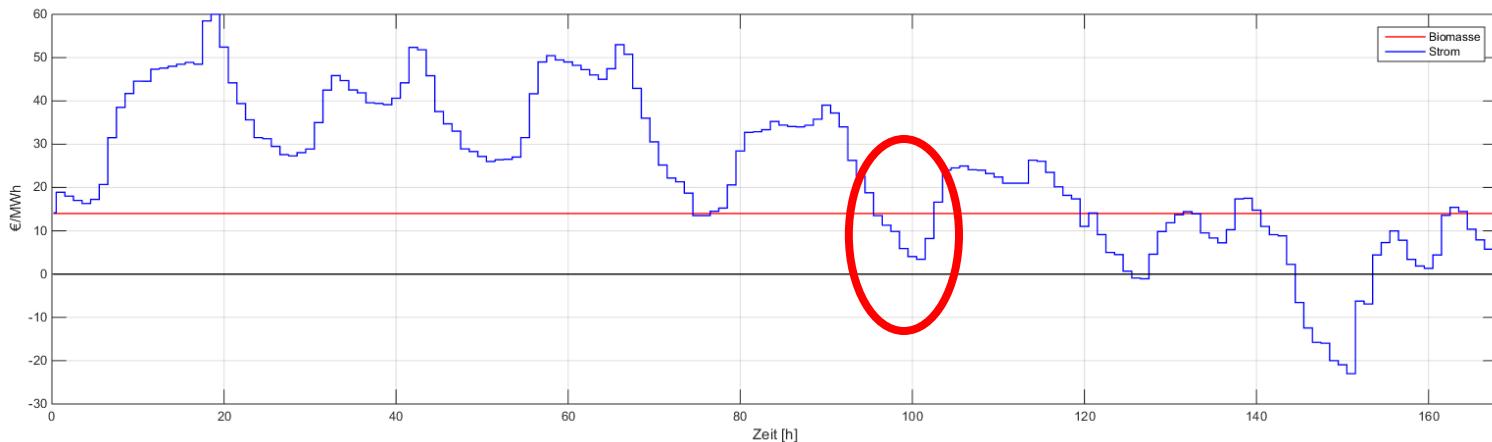

Results

SG: Steam Generator
EB: Electrode Boiler
TES: Thermal Energy Storage

Energy Market-Prices

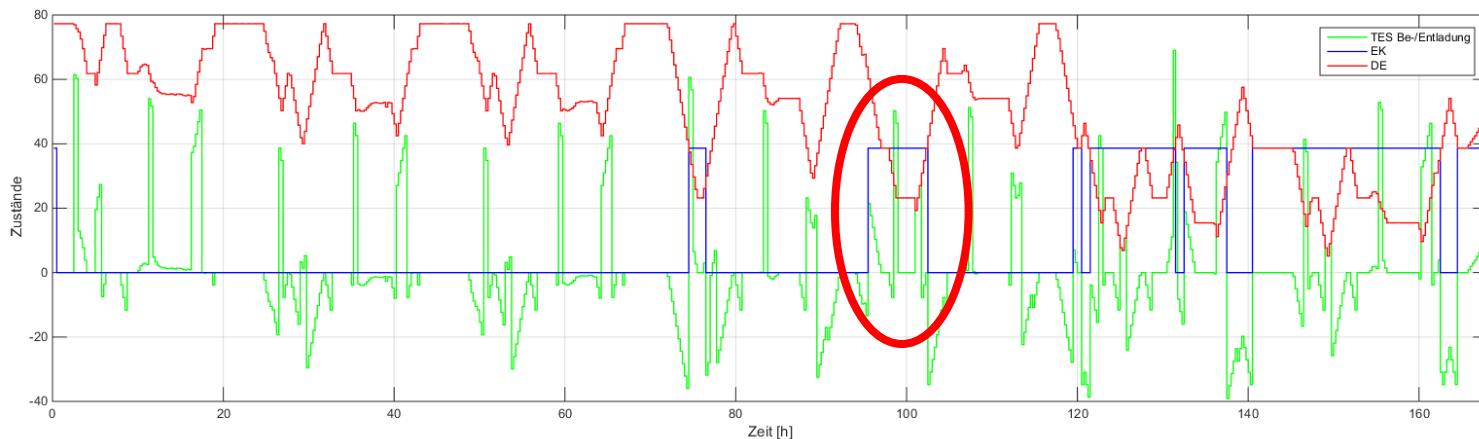

Source: R. Hofmann, S. Dusek, M. Koller, H. Walter: "Flexibilisierungspotenzial für Energieanlagen in der Industrie. Intelligentes Demand-Side-Management durch Integration von thermischen Speichern - Teil 1"; BWK, 68 (2016), 9; 6 – 11.

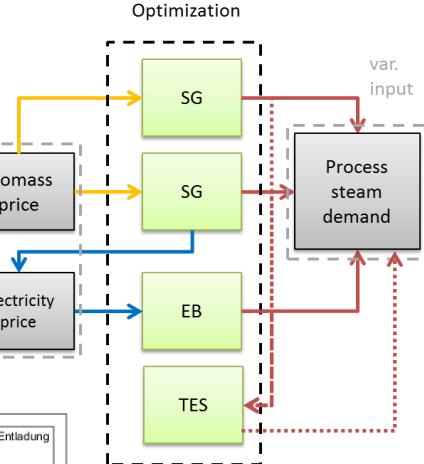

Results

SG: Steam Generator
EB: Electrode Boiler
TES: Thermal Energy Storage

States (SG + TES + EB)

Source: R. Hofmann, S. Dusek, M. Koller, H. Walter: "Flexibilisierungspotenzial für Energieanlagen in der Industrie. Intelligentes Demand-Side-Management durch Integration von thermischen Speichern - Teil 1"; BWK, 68 (2016), 9; 6 – 11.

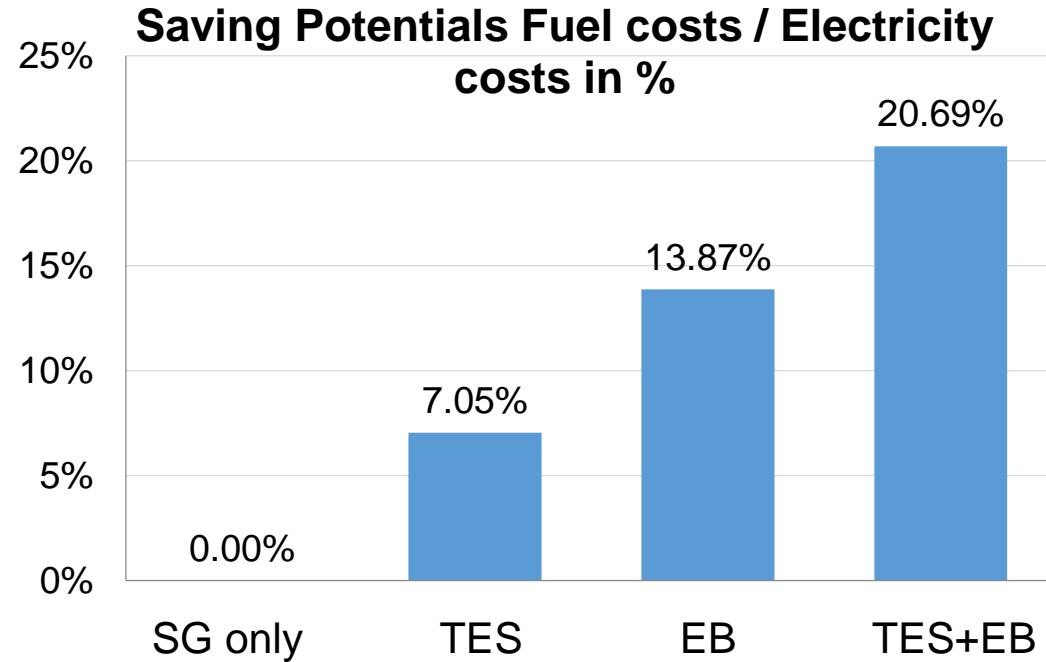

Operational
optimization

Potential depending on individual Process

Result of a test study:

- fictitious energy supply system
- historical electricity prices
- constant biomass price
- simulation time: 1 week

DEMO

PI System in context of SIC! - Runtime Model

Data
handling
and
treatment

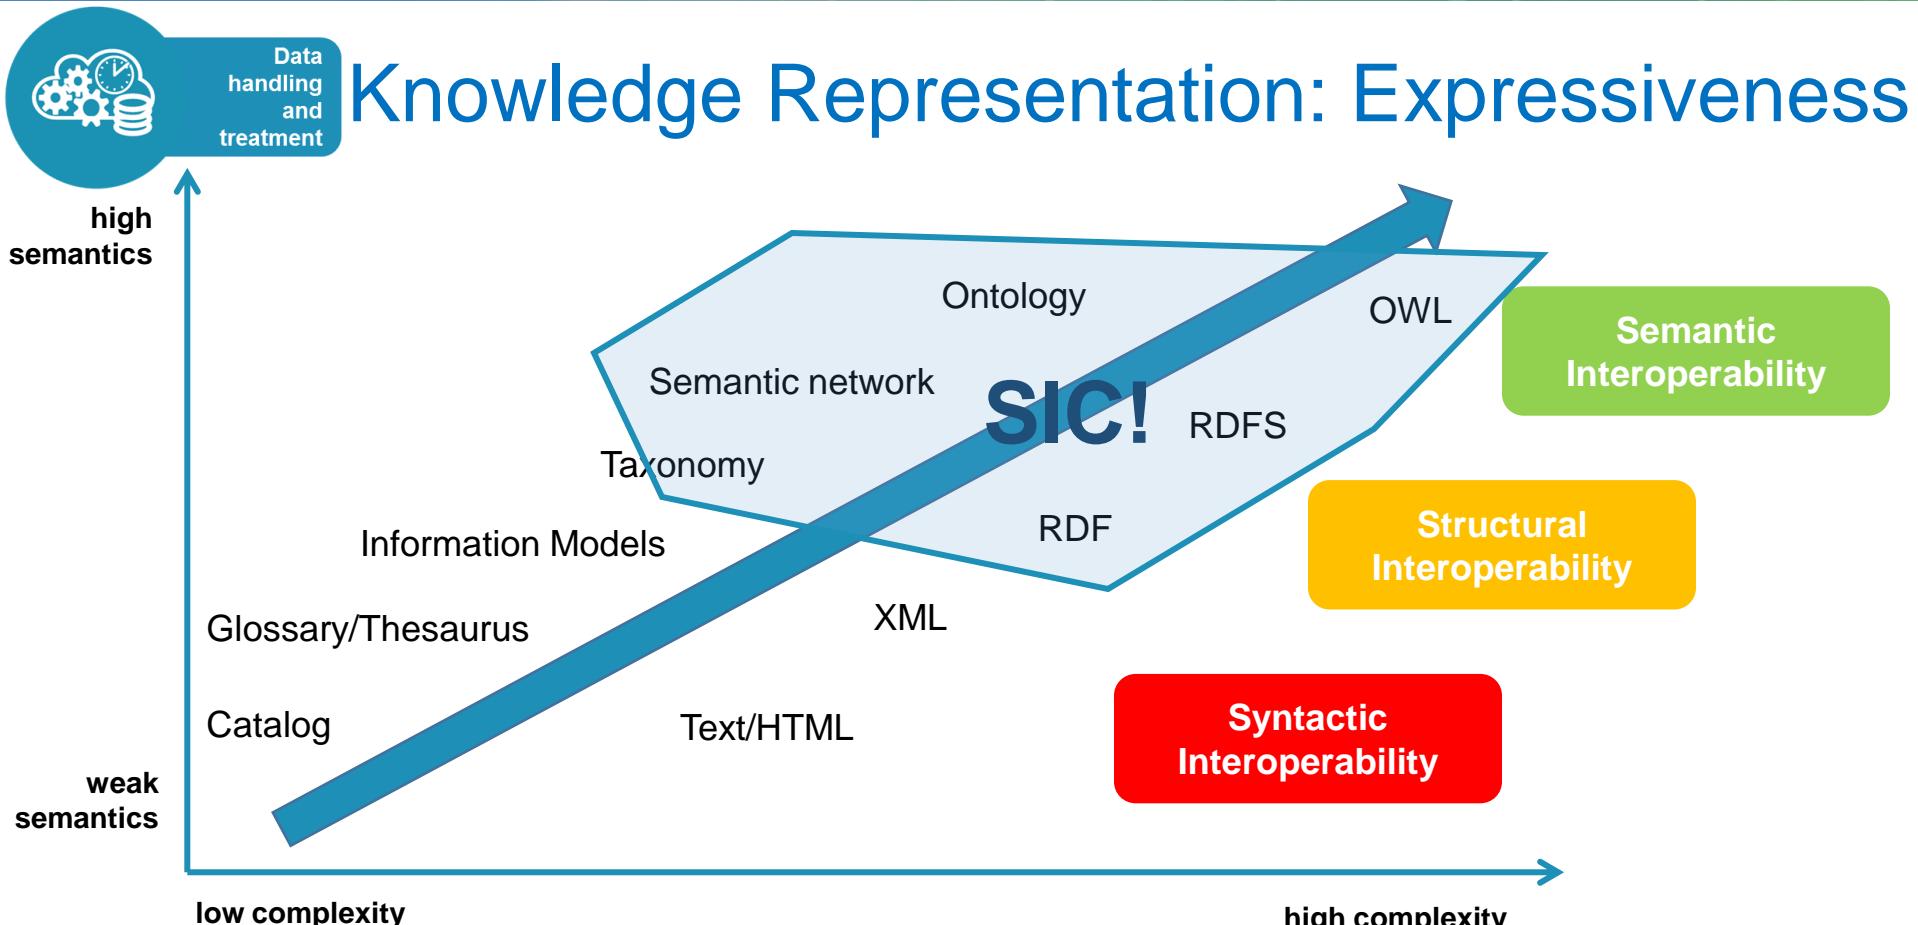

Motivation...

PI system beneficial for research activities:

- ✓ single point of truth
- ✓ preparation of data for data scientists
- ✓ cross border enablement

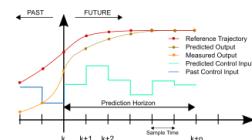

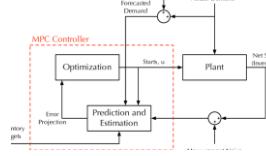

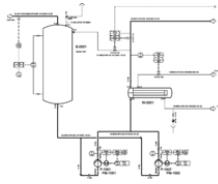

“Unified data from different sources to provide data scientists the same view at the same time step...”

Thermal Energy Storage Model

1D Model
+
Model validation with real Lab measurement data

Source: M. Koller, R. Hofmann, Mixed Integer Linear Programming Formulation for Sensible Thermal Energy Storages, Proceedings of the 28th ESCAPE, Graz 2018.

Comparison Experiment - Simulation

- ✓ Validation of the 1D model of the fixed bed regenerator
- ✓ Highly dynamic operation
- ✓ Temperature spread

Data
handling
and
treatment

Next Steps...

Implementation of OSIsoft

- ✓ PI System
- ✓ PI Data Archive (time series)
- ✓ PI Asset Framework

to the fixed bed regenerator at the
TU Wien lab.

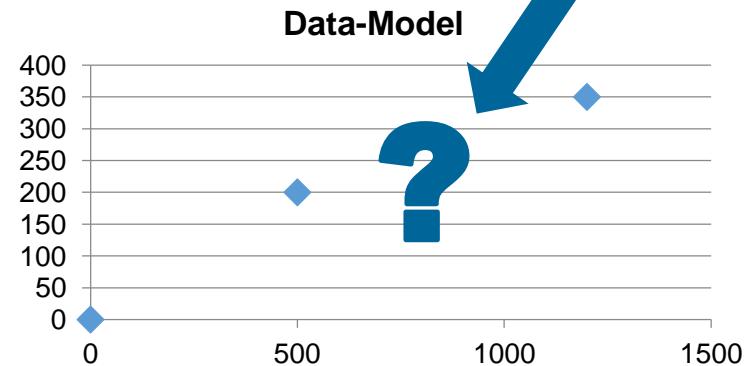

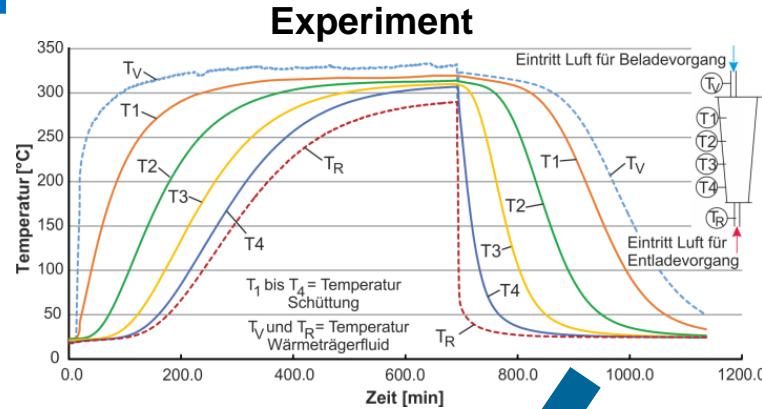

Connection via evon – XAMControl®
automation system

Model Comparison

- ✓ Physical vs. data driven
- ✓ Analysis of model formulation (for exact description of storage behavior)
- ✓ Neuronal network techniques
- ✓ Full understanding of the highly dynamic operation

Acknowledgements
