BILLION

Net profit

€ 2.2

BILLION

More than

3 MILLION

CUSTOMERS
& PATIENTS

Large Industries perimeter

365

Large Air Separation Units
Oxygen, Nitrogen, Argon

50

Steam Methane Reformer Units
Hydrogen, CO, Syngas

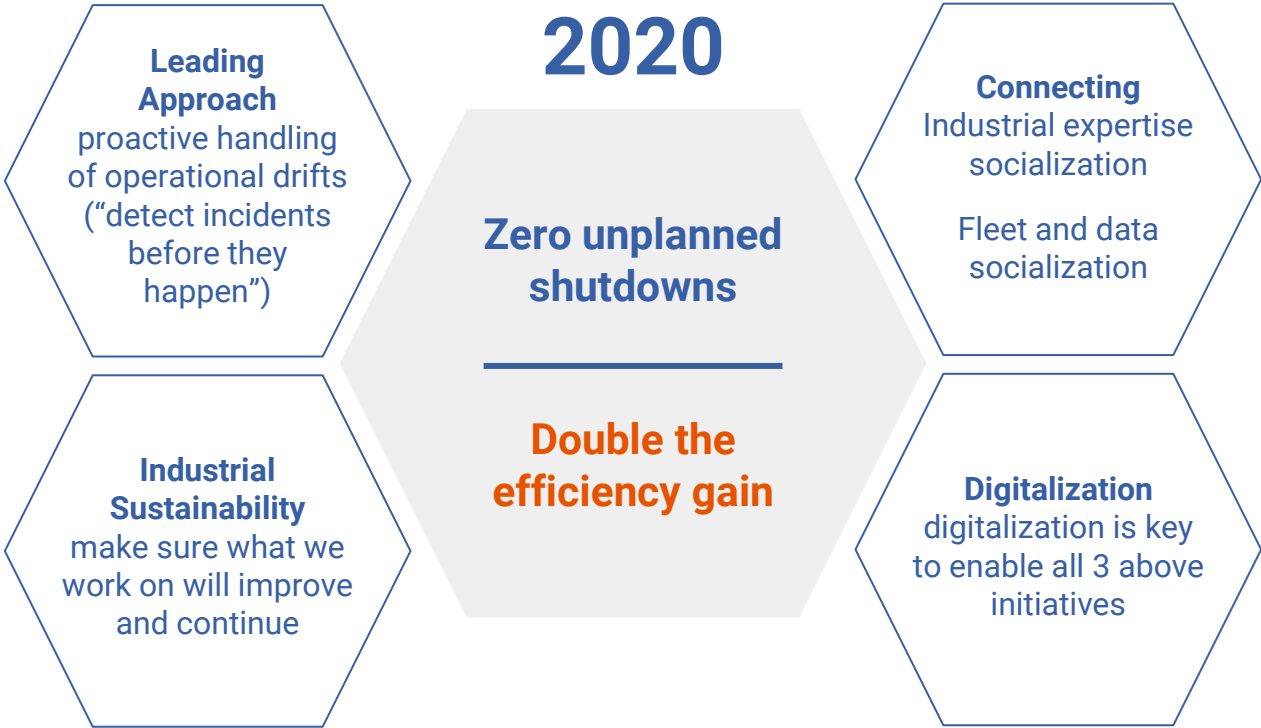

18

Cogeneration Units
Steam & Power

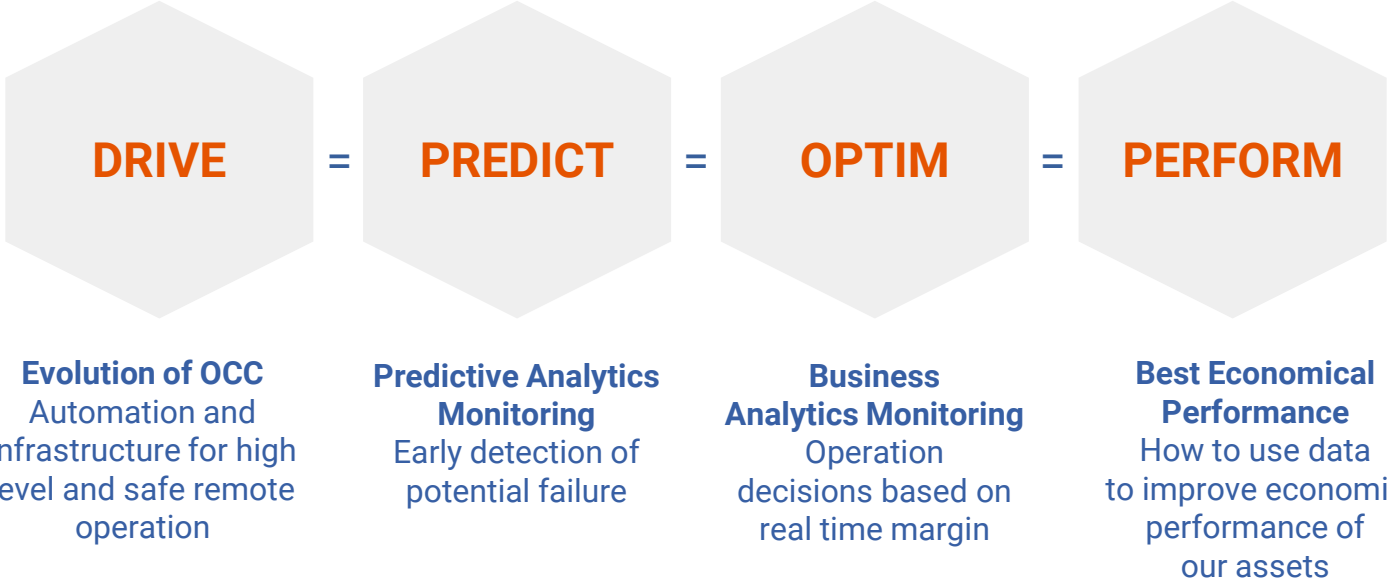

- Best in class performance in **safety** and **availability**.
- We improve the **efficiency** of our customer processes and help them preserve the environment.

Air Liquide Large Industries business challenge

Air Liquide Large Industries business challenge

SIO.Drive - ROCC

2

ROCCs

24/7

Providing service to customers supplied in industrial gases

22

Production units connected to the remote center

20

Million euros of investment

8+

Countries in Southeast Asia with units to be progressively connected

18+

Production units will be progressively connected to the remote center

ALIZENT

A S S E T I N T E R A C T I V E

a Key Partner

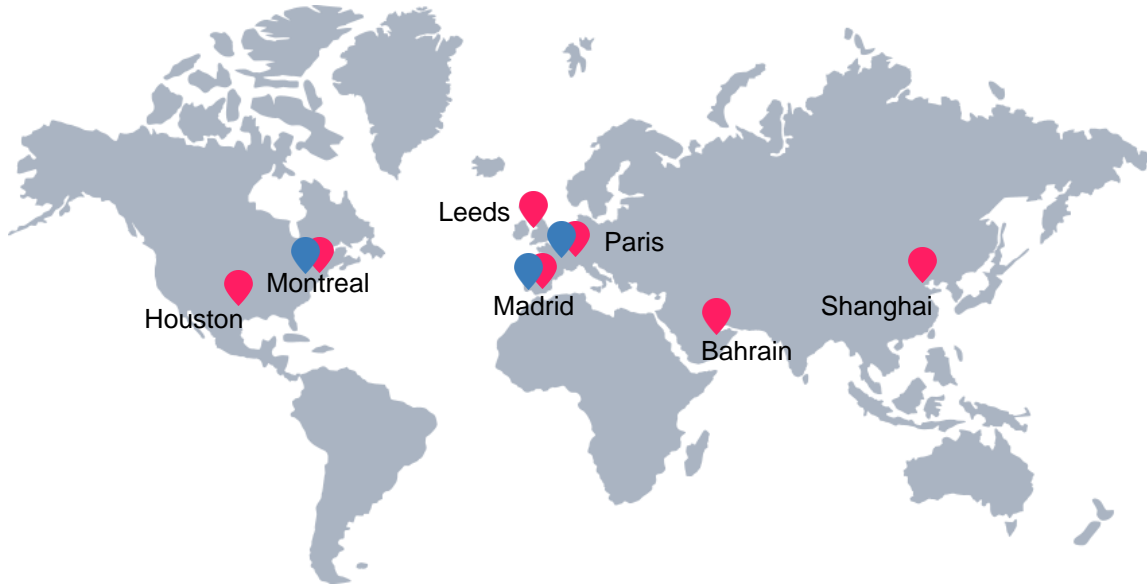

Alizent purpose

Alizent is a fully owned subsidiary of Air Liquide, dedicated to **Industrial Internet of Things**. We **design** and **operate** solutions that **connect assets** to provide data and enhance performance to:

- deliver Air Liquide Digital Transformation for asset management and production & logistics optimization
- **serve non competing 3rd party clients** facing similar challenges as AL in their Digital transformation. Ex: LPG Industry - Beer Industry - Aluminum Industry - Health & Wellbeing Industry - Food Industry

Alizent - local presence and global reach

7 Offices to serve clients from

3 Networked Technology Centers
(Paris - Madrid - Montreal)

- 250+ employees
- 20+ years of experience
- ISO 9001
- Digital Studio facilities in Paris

Alizent augments industrial & medical assets with data

Returnable Assets: 22M assets tracked today

Remote Assets : 205k connected assets today:

Production Assets : 200+ plants supervised today

Alizent Value Proposition

- Accelerate rotation
- Anticipate demand
- Inventory & working capital optimization
- Avoid losses / detect theft
- Attach info to the asset
- Enable new distribution & business model

- Optimize service costs (refill, maintenance...)
- Collect & share information with client / users / patients
- Enable new distribution & business model

- Improve plant performance
- Traceability of production / regulation compliance
- Pool operation teams across several assets
- Enable new distribution & business model

SIO Program and Alizent

People

- 3 continents
- Data Scientists
- IT Architects
- PI Experts

Processes

- Agile
- Iterative
- Collaborative
- Customer Experience

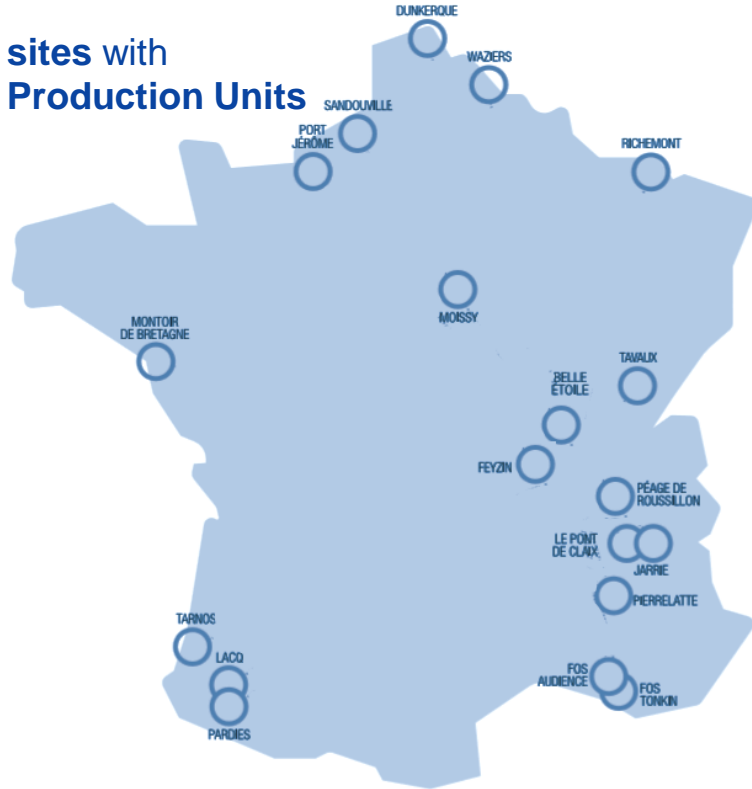

Phases

- Proof of Concept
- Pilot
- Industrialization
- Operation

Air Liquide Industries France New Remote Operation Control Center (ROCC)

ALFI before ROCC

19 sites with
22 Production Units

Plant
manager

Production
supervisor

Technicians

- Safety
- Production optimization
- Maintenance
- Local customer service
- Regulatory compliances
- Billing

Old habits with PI System

Ownership and update

- Creation numerous displays incorrectly shared, updated and/ or questioned

Files multiplicity

- For x same equipment x views meaning x files to maintain

Time consuming

- Numerous tags and tag naming across AL not homogeneous
- => spend time searching/asking

1 expression 5 experts 5 results

- For 1 measure on 1 equipment 5 tags

ALFI with ROCC

A unique remote operation center connected to production units in France

Based in Saint-Priest, the remote operation and optimization center is gradually being connected to 22 units producing gases for industry and health in France.

In the production units, the teams are able to focus on equipment safety and performance.

1

REMOTE OPERATION AND OPTIMIZATION CENTER

20

MILLION EUROS OF INVESTMENTS

22

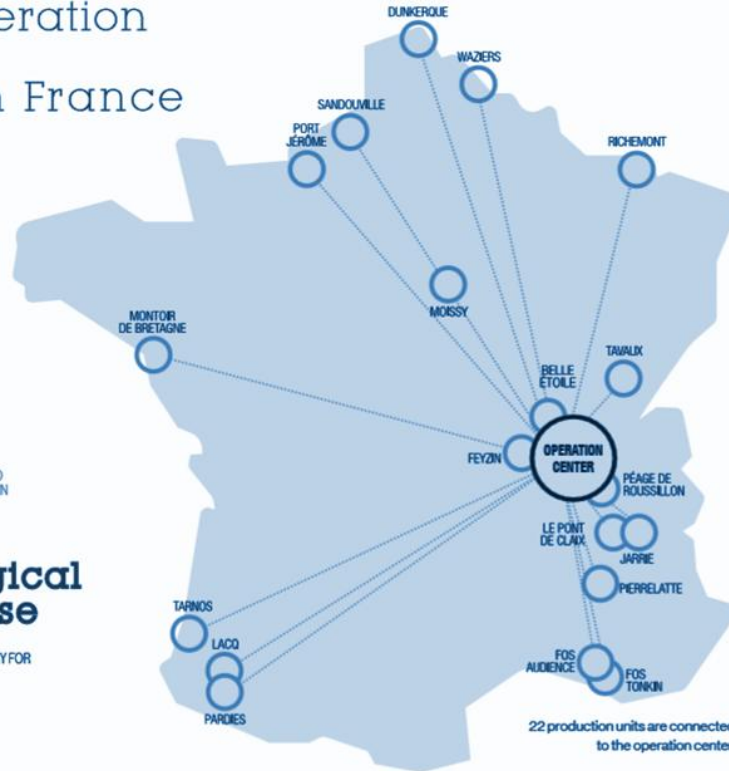

PRODUCTION UNITS CONNECTED TO ONE REMOTE OPERATION AND OPTIMIZATION CENTER

24/7

PROVIDING SERVICE TO CUSTOMERS SUPPLIED IN INDUSTRIAL GASES

Technological showcase

CERTIFIED BY THE INDUSTRY FOR FUTURE ALLIANCE¹

22 production units are connected to the operation center.

1. Alliance Industrie du Futur

New roles and challenges

Real time pilot

Analyst

- Production optimization
- Predictive maintenance
- Customer service
- Automatic billing

Plant manager

Foreman

Technicians

- Safety
- Equipment availability
- Maintenance
- Regulatory compliances

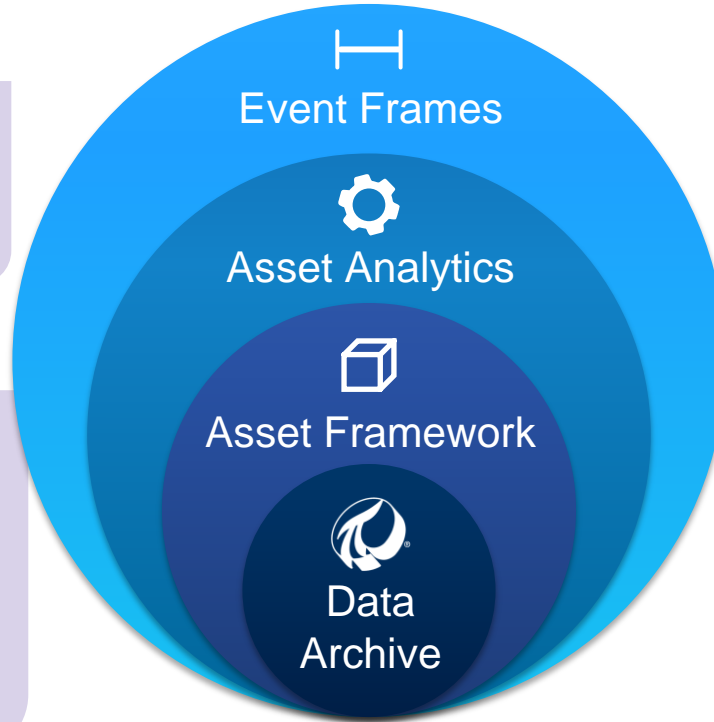

Product impact for real time monitoring and optimization

PI ProcessBook

- Less file using Element relatives display
- information access facilitated

PI Vision

- Easy share of displays and EF
- Clear ownership / display update ++
- Possibility to import ProcessBook display/share easily

PI DataLink

- Retrieval of data from analytics
- EF frequency and relevance easy to assess

PI System Explorer

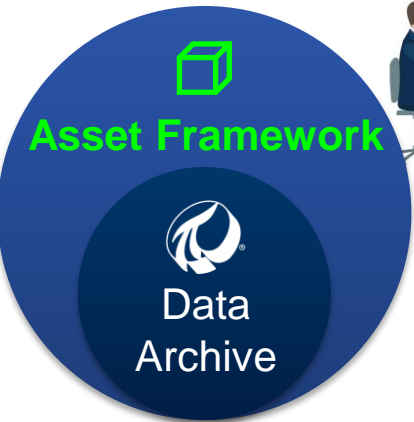

- User friendly access to database management & testing

PI AFBUILDER

- Quick deployment of data in AF databases

Implementation - Template definition & creation with PI System Explorer

 PI System Explorer

Next step - PI Notification implementation

Short term notification to Real time pilot for Quick action

Short and mid term notification to Analyst for Sustainable solution

Warning notification to Everyone for Crisis case

Next step - Central Asset Framework Management (CAFM)

What ?

- A project launch by the Historian Worldwide Users Committee to create a base template library for Asset Framework for operation.

Why ?

- **To define templates and architecture to:**
 - Reduce time to deployment
 - Facilitate asset management and base KPI deployment
 - Reuse visualization screens and reports
- **To define an architecture philosophy consistent with our business and other data project being developed in parallel**

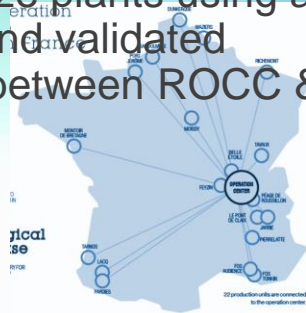

Air Liquide

Remote monitoring & optimization for Air Liquide plants using AF/EF

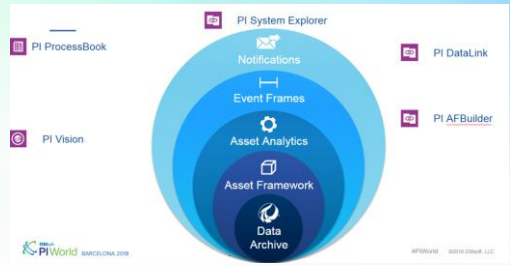

CHALLENGE

Change old habits with PI system to remotely monitor and optimize plants using a common and validated database between ROCC & plants

SOLUTION

AF implementation and leverage of data using more tools within the PI System

RESULTS

Reactivity
Optimization
Customer satisfaction

Production shortage
Gas venting
Liquid Overflow

Trust \cap ROCC & plants

Excellent savings

Global deployment
