

SUGAR PACKING STATION OPTIMIZATION USING OEE

LLOYD MELROSE

Safety Moment

Safety Moment

What do these mean?

- **Lesson:** Passing driver's license test decades ago doesn't mean you're a good driver;
- Re-learning, applying ourselves, staying up to date and not taking safety for granted is a better approach.

Illovo Sugar Africa (Pty) Ltd Overview

Illovo Sugar Africa (Pty) Ltd Overview

**Associated
British Foods
plc**

100%
stake in

Illovo is a diversified
company, with sugar
interests across Africa.

AB Sugar, as a division of
Associated British Foods
plc (ABF) represents ABF
in respect of all its sugar
interests including Illovo.

Illovo Sugar Africa (Pty) Ltd Overview

- Leading African low-cost sugar and downstream product producer;
- 16 Operations across 6 African countries;
- Strong domestic, regional & preferential sugar markets;
- Downstream - good local and strong export markets;
- Greater than 12 000 people are permanent employees while approximately 18 000 people are employed at peak periods.

Illovo's Sugar Products Overview

A range of products sold into domestic, preferential, regional and world markets.

Our **sugar** offerings include:

- **Industrial sugar:** Mainly in refined bulk form, sold primarily to soft drink, confectionery, canning and re-packing customers;
- **Bulk raw sugar for refining:** Primarily exported to sugar refineries;
- **Specialty sugars:** Sugar with unique flavour, grain size and colour, exported;
- **Prepack sugar:** Various pack sizes of refined and brown sugar pre-packed in paper or plastic using Form Fill and Seal Machines (FFS) for direct consumption in domestic markets.

PI System Infrastructure Overview

- 13 PI and 13 AF Servers – 12 sites and 1 roll-up;
- Hyper-V virtualized Server standard;
- Physical Interface Node Server standard;
- Predominantly PI Process Book and PI Datalink visualization tools;
- PI RDBMS, PI OPC, PI UFL and PI to PI interfaces;
- PI Manual Logger and Excel (PIPutVal) for data entry;
- Increasing PI Vision adoption;
- Increasing PI Asset Framework (AF) adoption.

Business Need

Business Need

- One of the business strategies was to shift from bulk product to smaller Stock Keeping Units (SKU) and to increase this customer base;
- Need to improve quality, throughput and SKU diversification;
- Need to improve performance from the Form Fill and Seal (FFS) Pre-pack Packing Machines;
- Measure, analyze, improve and control.

Form Fill and Seal (FFS) Packing Machine

Project Charter

Problem Statement

- Reliance on shift log sheets in terms of capacity utilization on the FFS packing machines to provide insight into the performance and availability of these machines;
- Minimal repeatable, reliable data available to confirm that the machines are operating at optimum levels or to highlight controllable constraints for optimization purposes.

Key Output Measures

- Improved performance of FFS packing machines enabled by a cost effective and simple reporting system;
- Improved performance insight to aid decision support;
- Data easily accessible for customizable Excel reports;
- Performance and downtime reported on an hourly, shift, daily, weekly basis;
- Downtime Reporting via Pareto diagram of top downtime “bad actors” via predefined reason codes;
- Data to be historically archived and retrievable for creation of user defined customizable Excel reports.

Scope of Work

- Nakambala (Zambia): 11x FFS Machines, 4x Fawema, 2x Stick Pack;
- Dwangwa (Malawi): 12x FFS Machines;
- Nchalo (Malawi): 8x FFS Machines;
- Msolwa (Tanzania): 6x FFS Machines;
- Ruembe (Tanzania): 6x FFS Machines;
- Total of 49 Machines at 5 sites across 3 countries.

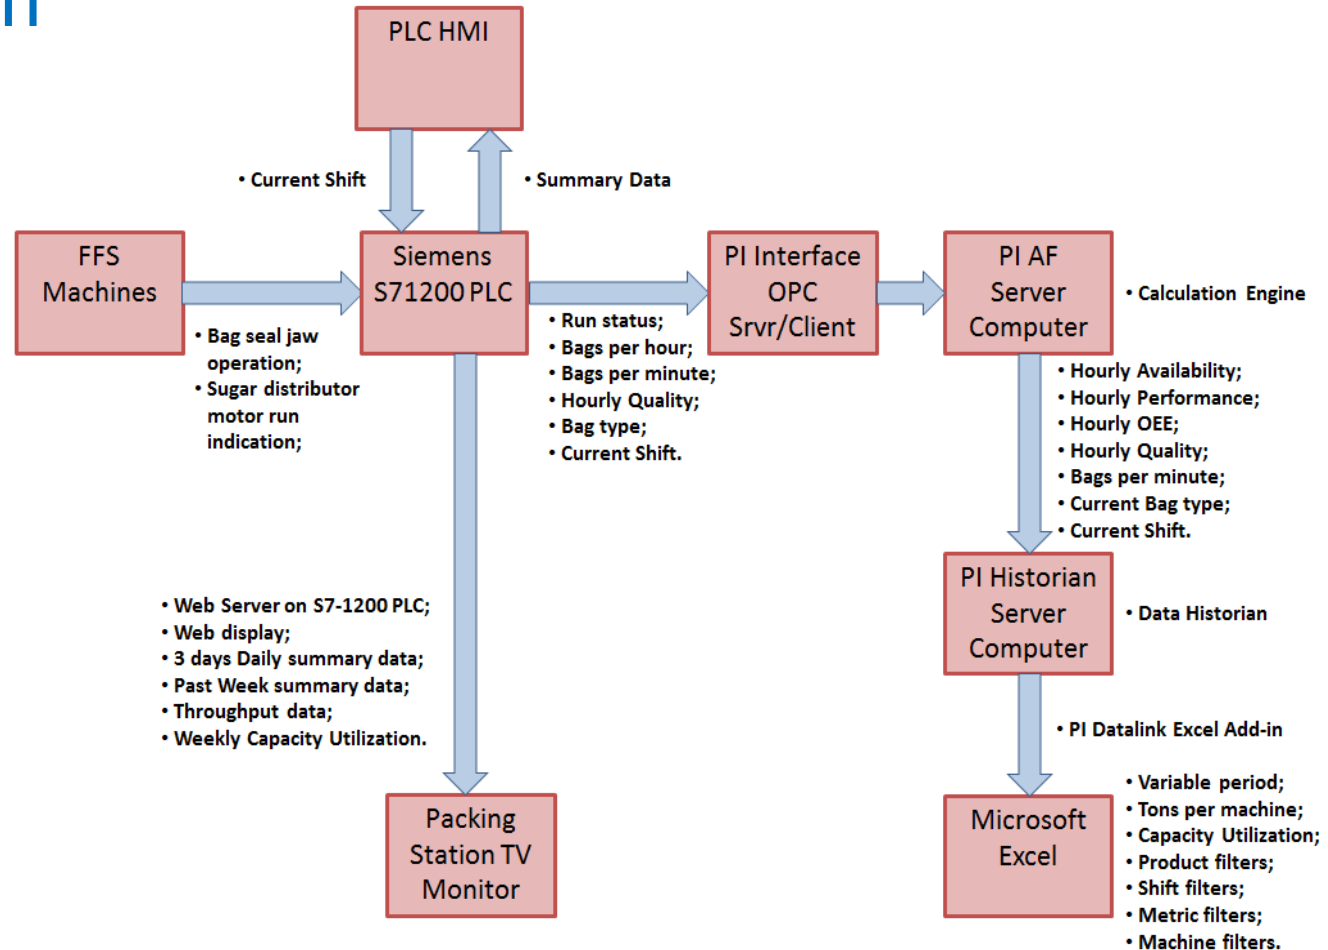

Implementation

Defining the OEE Metric

- OEE stands for Overall Equipment Effectiveness and shows the effectiveness of a machine compared to the ideal machine as a percentage. The difference between the ideal and the actual is made up of the time, speed and quality loss.
- OEE measures the losses occurring on machines in order to be able to increase the productivity and effectiveness of those machines.

Conclusion

Illovo Sugar Africa (Pty) Ltd

Sugar Packing Station Optimization using OEE

CHALLENGE

Improve the performance of FFS packing station enabled by a cost effective, simple reporting system for decision support

- Reliance on shift log sheets for capacity utilization of the FFS packing machines
- Minimal repeatable, reliable data available to highlight controllable constraints for optimization purposes

SOLUTION

A cost effective OEE reporting system implemented using PI AF Analytics for the Sugar FFS Packing Stations

- Real-time information to shop floor
- Improved insight to monitor and optimize performance
- Report on 49 Packing Machines at 5 sites across 3 countries at minimal cost using existing PI infrastructure in 4 months

RESULTS

PI System OEE reporting solution enabled a more focused approach by personnel to improve the performance of the FFS station

- Pilot site Performance improvement of 50% in 3 months
- Pilot site Availability improvement of 25% in 3 months
- Pilot site OEE improvement of 30% in 3 months
