

Barrick Gold Cortez Process Turns to Industrial IoT to Maximize Uptime of Its Critical Assets

Debra Dewald

Software System Analyst, Barrick Gold

Arun Santhebennur

Co-founder & COO, Petasense

Agenda

- 1. Introduction to Barrick Gold**
- 1. Push for Industrial IoT Technologies**
- 1. Petasense Asset Reliability & Optimization**
- 1. Pilot at Cortez Process**
- 1. Pi Integration**

Barrick Gold

One of the world's largest gold producers

- HQ in Toronto, Canada
- 75%+ of our gold production from the Americas
 - including Argentina, Canada, Dominican Republic, Peru and the United States
- At the start of 2018, Barrick had proven and probable gold reserves of **64.4 million ounces**

Barrick Nevada

Cortez Process

- Located 100 km southwest of Elko, Nevada, in Lander and Eureka counties
- Cortez Mining District mining since 1862
- Proven and probable gold reserves at Cortez at start of 2018 were **10 million ounces**

Industrial IoT journey

Barrick has a strategic intent to harness the potential of **IIoT technologies** across sites

“Internet of Things is transforming the everyday, physical objects that surround us into an ecosystem of information that will enrich our lives.”

PricewaterhouseCoopers report

Barrick is a long-term user of OSIsoft PI

- Using PI for the past 10 years
 - EA customer since 2015
- **Over 250K tags** being tracked
- Primary use cases:
 - **Analytics & visualization**
 - **Process modeling**
 - **Planning**
 - **Process monitoring**

BARRICK

+

OSIsoft

... but limited use for predictive maintenance

Predictive Maintenance until now

Limitation

Infrequent data collection
(every 4-5 weeks)

Consequence

Increased failure risk (asset condition may change between data collection)

Vibration on horizontal axis only

Misses important signals in vertical and axial directions

Time-consuming data collection
(350 points = 2-3 hours each day)

Increased failure risk (asset condition may change between data collection)

Tedious analysis process
(3-4 hours per hour of sampling)

Infrequent and rushed analysis

Predictive Maintenance until now

Limitation

Infrequent data collection
(every 4-5 weeks)

Vibration on horizontal axis only

Time-consuming data collection
(350 points = 2-3 hours each day)

Tedious analysis process
(3-4 hours per hour of sampling)

All resulting in BIG risks

Unplanned downtime, Costly repairs and Unnecessary PM

Consequence

Increased failure risk (asset condition may change between data collection)

Misses important signals in vertical and axial directions

Increased failure risk (asset condition may change between data collection)

Infrequent and rushed analysis

4 disruptive technologies have paved the way for IIoT

Pervasive Wireless
Technologies

Inexpensive
Sensors

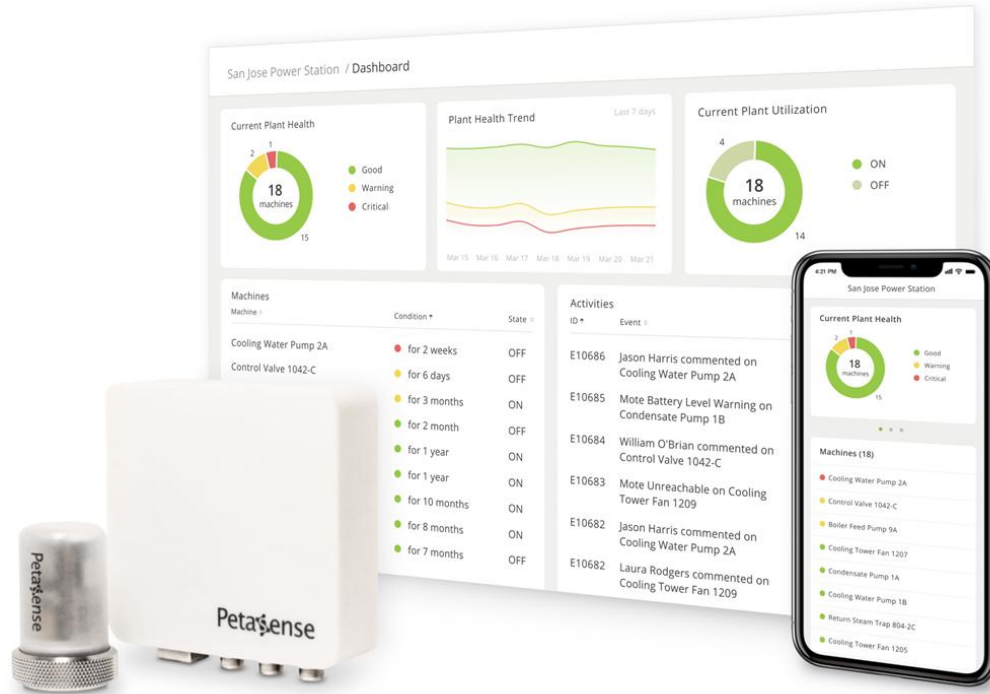

High-performance
Cloud Computing

Advanced Data Science
& Artificial Intelligence

Petasense Asset Reliability & Optimization System

Petasense Asset Reliability & Optimization System

1 IoT Sensors

2 ARO Cloud

3 Web & Mobile Apps

AI-based Asset Health Score

Benefit

Reliability Engineers and Analysts become much more efficient

- Analyst need only review fraction of assets, while rest are known to be healthy
- AI provides diagnostic insights, troubleshoot assets with potential issues

AI-based Asset Health Score

Step 1) **Input machine specs** to configure the digital asset model

Step 2) **Establish a baseline** of typical operations in the first 2-4 weeks of monitoring

Step 3) **Algorithm compares new data to baseline** adjusting the health score based on anomalies and deviations detected

Integration with OSIsoft PI

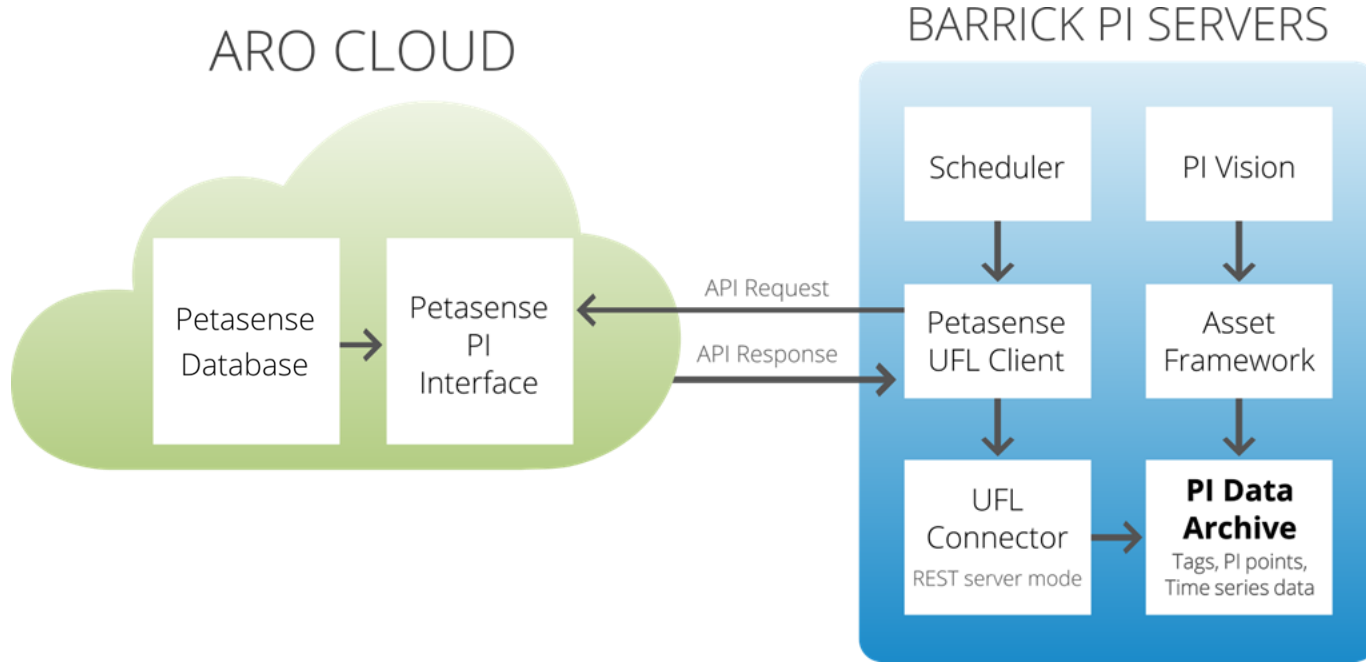

Benefit

Bridges the gap between asset reliability & operational efficiency

- **Correlation of asset and process data**, a holistic picture of operational health

Integration with OSIsoft PI

Petasense Pilot at Barrick Cortez

Elko, Nevada

Pilot Scope

Monitor 10 Machines

- Tails Pumps, Barren Pumps, Mercury Scrubber Fan, Cyclone Feed Pump, Electrowinning Fan, Agitator, Ball & Sag Mill
- Wireless data collection every 3 hours (instead of every month)

Integration with OSIsoft PI

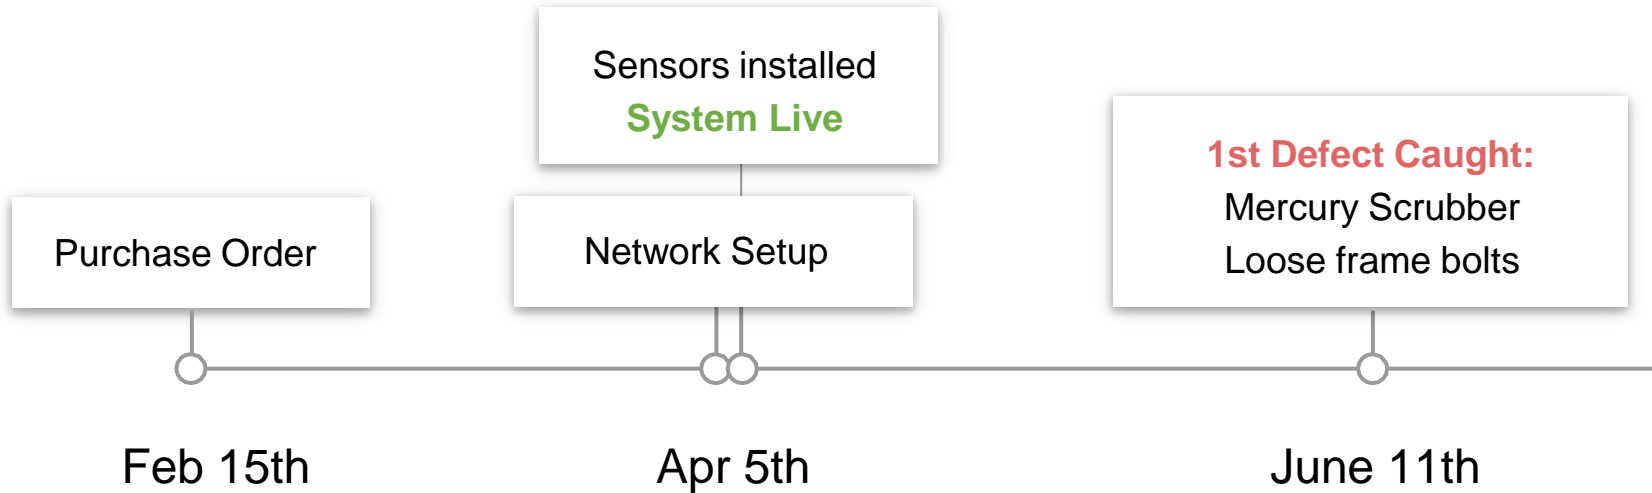

- Asset condition data alongside process data

Industrial IoT sensors in action

Seeing ROI after 36 days of deployment

First Defect Caught

Mercury Scrubber Fan - Loose Frame Bolts

Avg Vib Trend - June 8 to 14, 2018

Recent Defect Caught

Barren Booster Pump - Elevated Noise Floor (Cavitation)

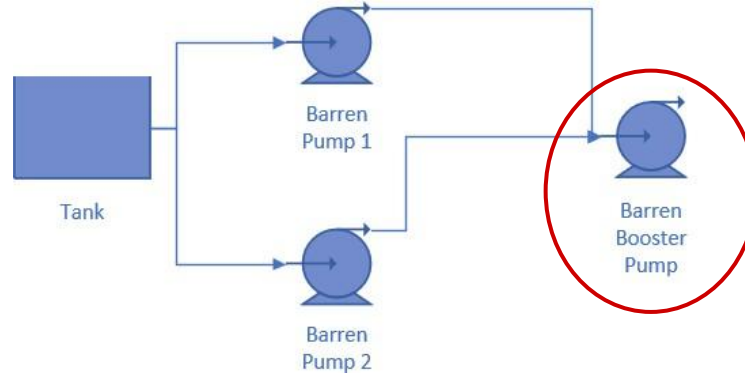

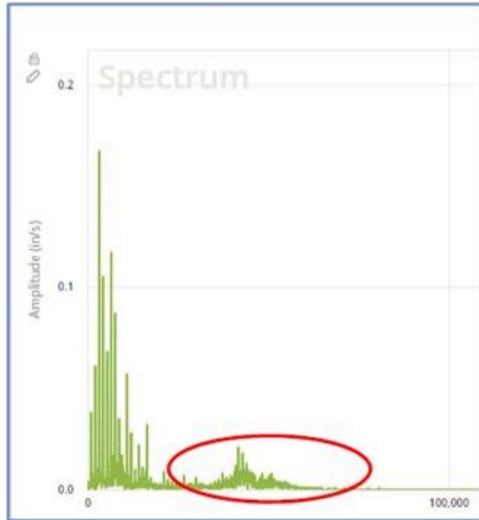

Vib Spectrum - Feb 22, 2019

Recent Defect Caught

Barren Booster Pump - Elevated Noise Floor (Cavitation)

Vib Spectrum - Feb 22, 2019

Prompted inspection of the two pumps
that feed into the Barren Booster Pump

Recent Defect Caught

Barren Booster Pump - Elevated Noise Floor

Root Cause Identified

IMPELLER WEAR
on Barren Pumps 1 and 2

Resulting in
CAVITATION

Two ways to integrate asset and process data

1

From Petasense to PI

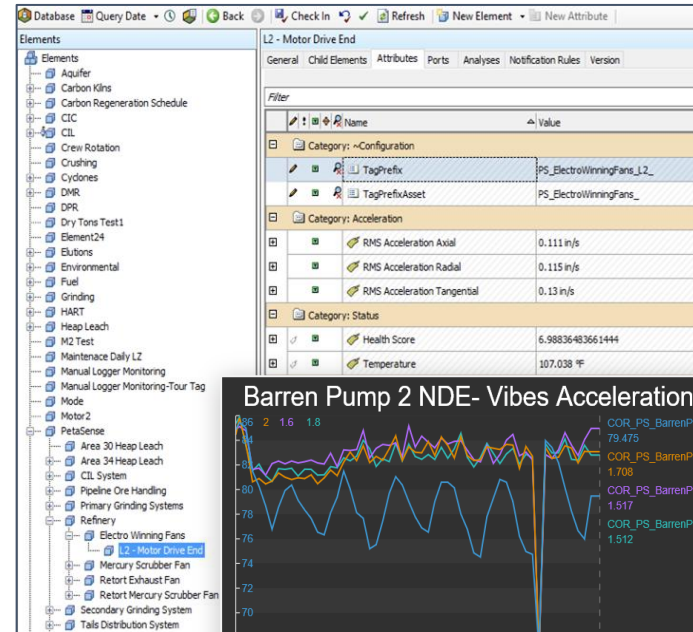

Use case

Process optimization,

Single-parameter alarms

User

Process Engineer, Site Engineer

Two ways to integrate asset and process data

2

From PI to Petasense

Use case

Diagnostics, Asset optimization,
Multiparametric AI-based analytics

User

Reliability Engineer, Analyst

Where we are today

70+ Machines Monitored

Mills, Agitators, Conveyors, Cyclone Feed Pumps,
Tails Pumps, Gland Water Pumps, etc.

1,200+ tags sent from Petasense to PI

Vibration, Temperature and Utilization data

Currently deploying at Goldstrike (sister site)

Benefits of implementing the IIoT System

Tangible

- Saved \$600K of potential downtime in just one instance
- Reduced Unplanned Downtime
- Reduced Repair Costs
- Extended Preventive Maintenance
- Improved Operational Efficiency

Intangible

- Peace-of-mind, No emergency failures
- No more walk-around data collection, only on an as needs basis
- Leverages existing data to get improved analytics about assets and processes
- Standardized approach to asset reliability across multiple sites

What's next in Barrick's IIoT journey?

- 1 Deeper integration of PI data into Petasense to leverage AI-based analytics
- 2 Continue deployment of Transmitters, collecting additional sensor parameters
- 3 Current pilot at Goldstrike Process, expand to production

BARRICK GOLD

Cortez Process Turns to Industrial IoT
to Maximize Uptime of Its Critical Assets

CHALLENGE

PI lacked asset condition data to optimize Predictive Maintenance

- Increased Risk of Unplanned Downtime
- Increased Cost of Repairs
- Unnecessary Preventive Maintenance

SOLUTION

Implement an IIoT-based Predictive Maintenance system

- Petasense Asset Reliability and Optimization (ARO) System
- Industrial IoT Sensors and Machine Learning Software
- Ability to Integrate with PI

RESULTS

Saved \$600K of potential downtime in just one instance

- Quick deployment and ROI
- Easy integration with OSIsoft PI, enabling advanced diagnostics and AI-based analytics
