

# Q&A with LADWP & Riverside Public Utilities

# LADWP Intelligent Water Utility Implementation

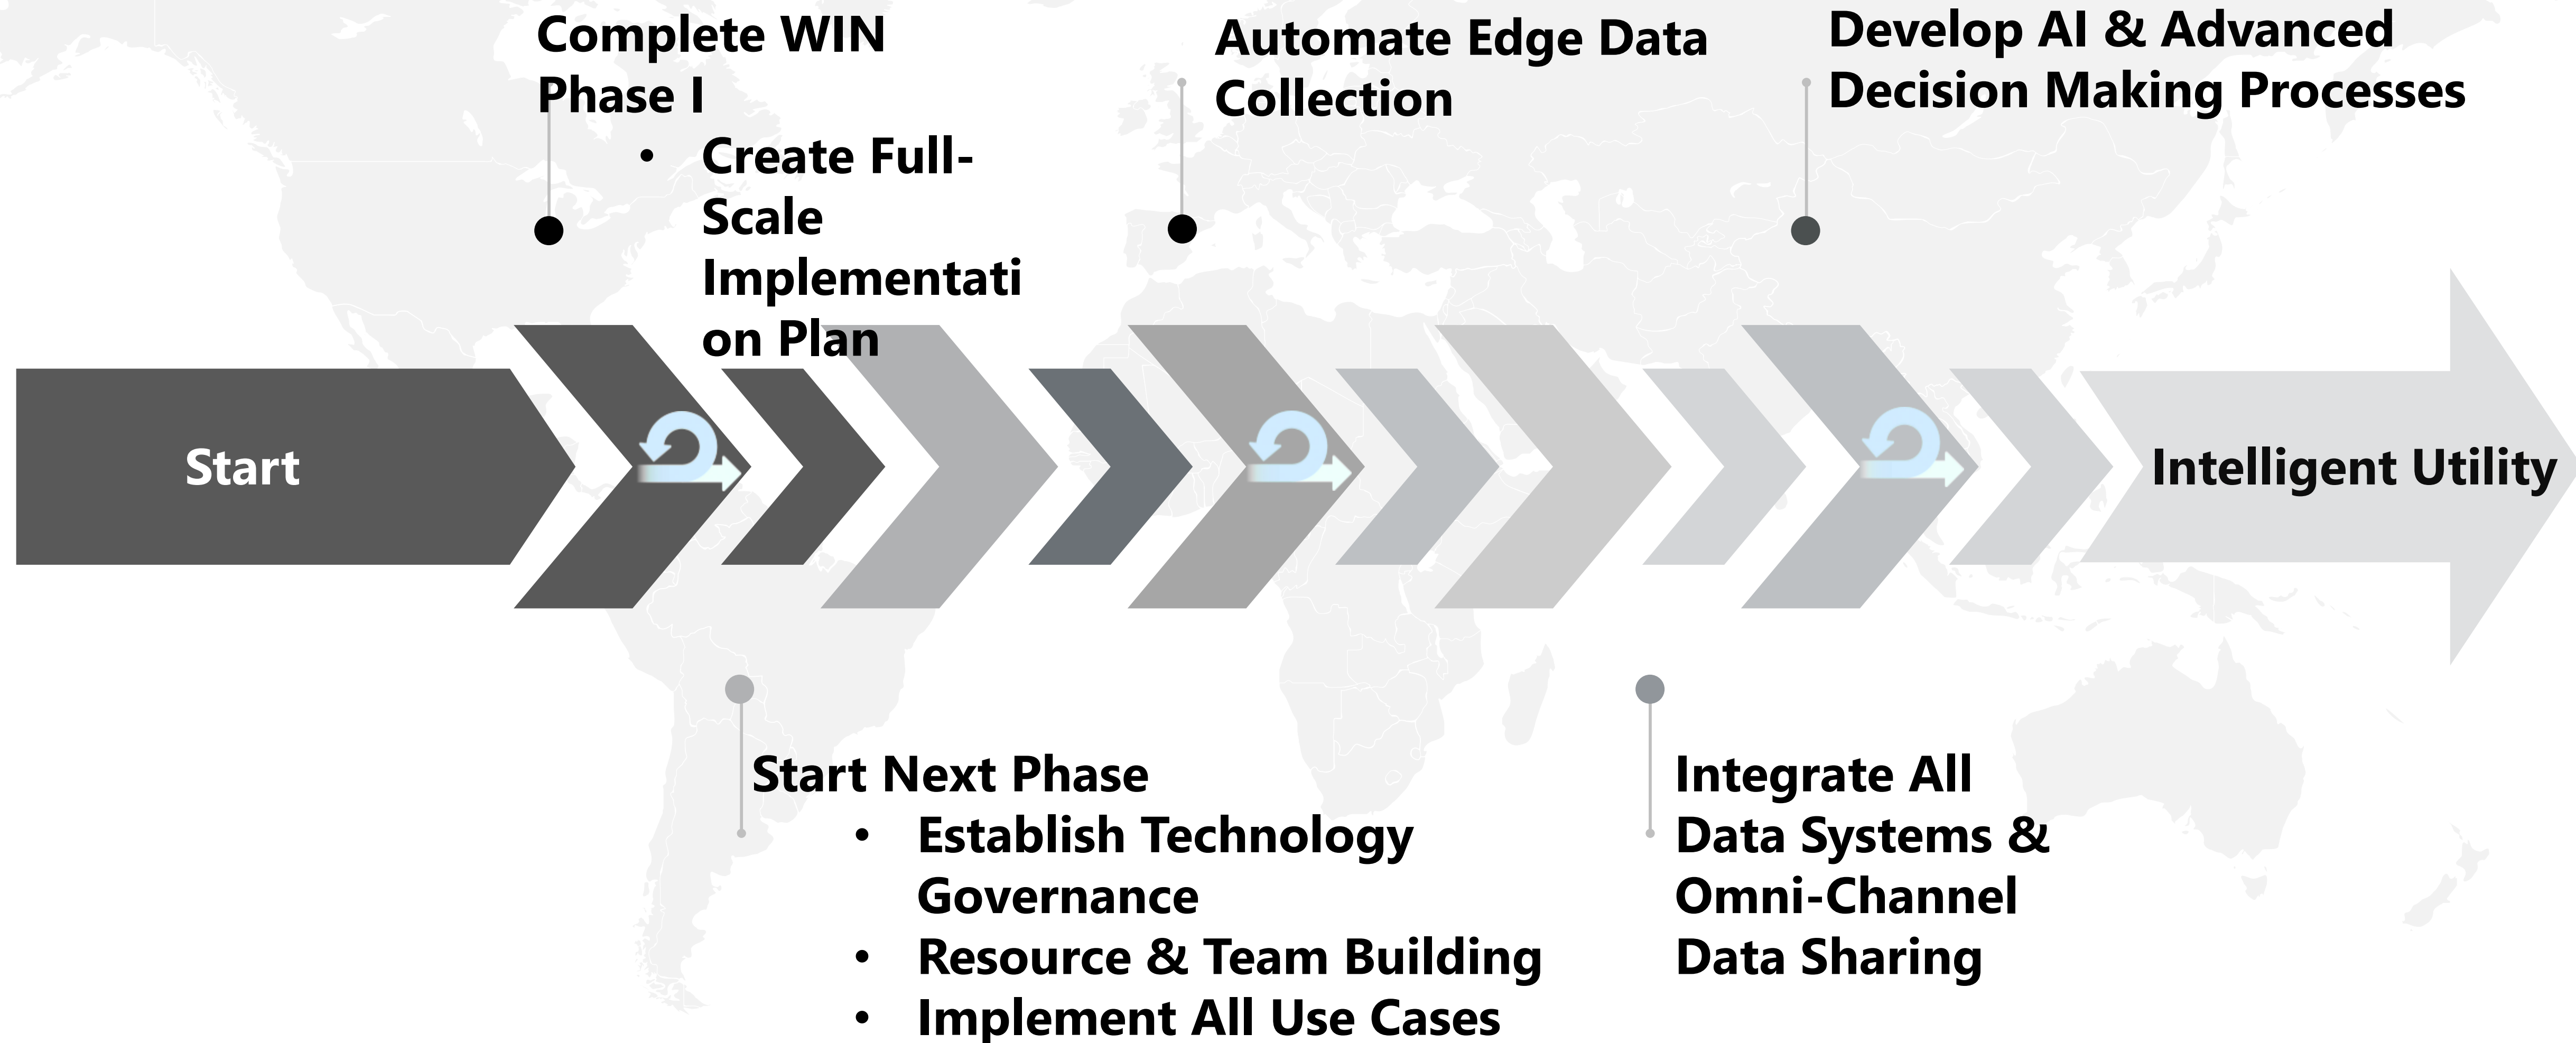

Presented By: Nicole Smith & Vincent Rivera

LADWP INTELLIGENT UTILITY IMPLEMENTATION ROADMAP IS UNDER DEVELOPMENT

# THE WAY FORWARD

# Digital Transformation: Using Data to Drive Operational Efficiency @ Riverside Public Utilities

Robin Glenney, Water Quality Administrator

Brando Crozier, Project Coordinator

# RPU'S STORY

## CHALLENGES

- Lots of data in disparate systems
- Time intensive manual reporting
- Limited access to real time operational data

## SOLUTION

- PI as a Data Hub
- Near real time PI Vision displays
- Automated PI DataLink Reports

## BENEFITS

- Easy access to previously difficult to reach data
- Four hours a day saved from day late reporting

“

Utilizing PI provides insight into our system in real time, allowing us to make effective operational decisions.

”

David Garcia, Water Systems Operations Manager, Riverside Public Utilities

## Intelligent Water Utility Implementation

### WIN Team:

Nicole Smith – Project management  
Vincent Rivera – Operation Technology  
Eric Kim – Project management  
Charles Freeman – Information Technology

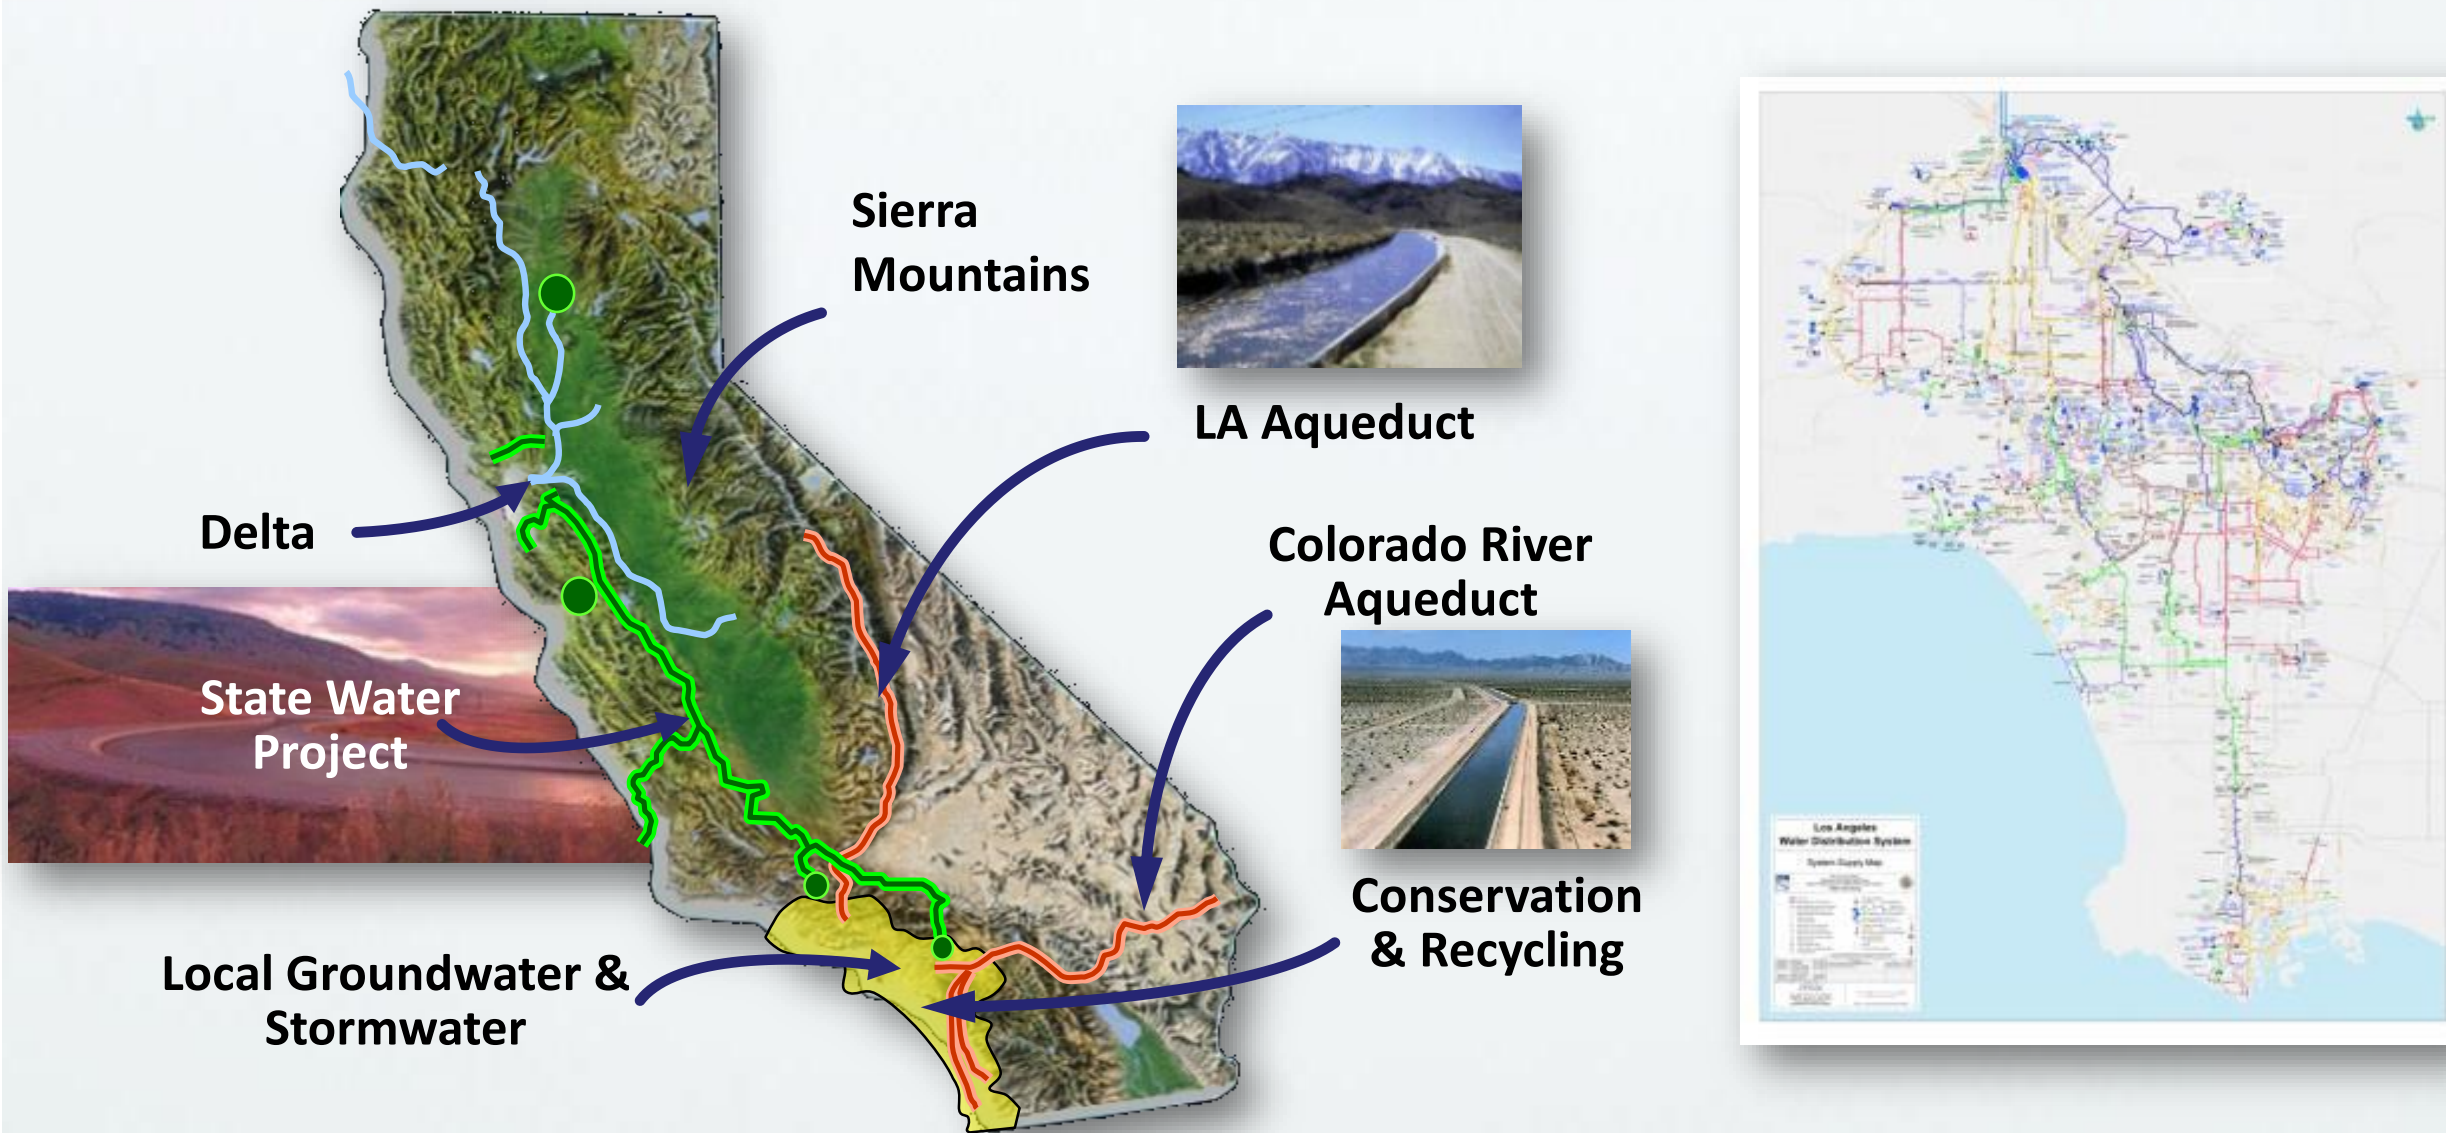

### Water System Management:

Richard Harasick  
Heidi Hiraoka  
Dave Christensen  
Louis Rubalcaba

# A BRIEF INTRO OF THE WATER SYSTEM & GOALS

- ❖ 4 million customers served & 465 square mile service area
- ❖ 2,806 large valves
- ❖ 60,714 fire hydrants & 681,000 service connections
- ❖ 7,337 miles of distribution mains (distance from Los Angeles to Sydney)
- ❖ 95 pump stations
- ❖ 29 treatment stations
- ❖ 328 regulation stations
- ❖ 118 reservoirs & tanks
- ❖ 70 water wells

## OPERATIONAL STRATEGIC GOALS

### • MANAGE INFRASTRUCTURE OPTIMALLY

### • DIVERSIFY WATER SUPPLY PORTFOLIO

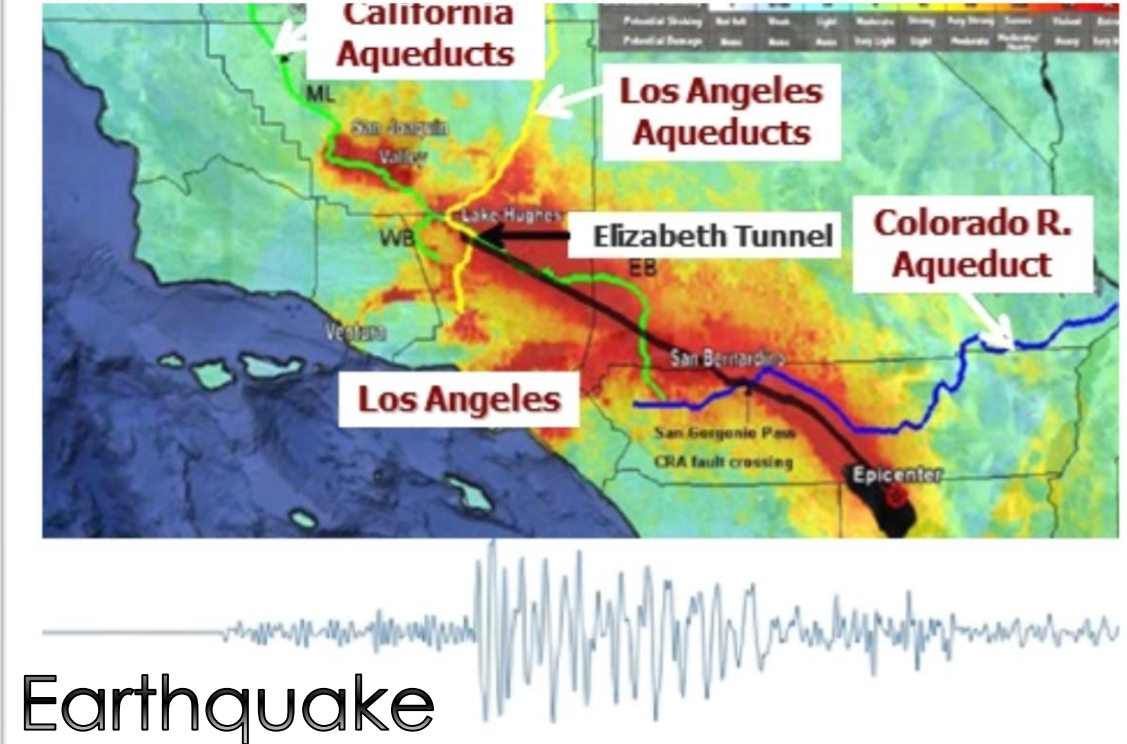

### • PROVIDE SAFE, HIGH QUALITY WATER

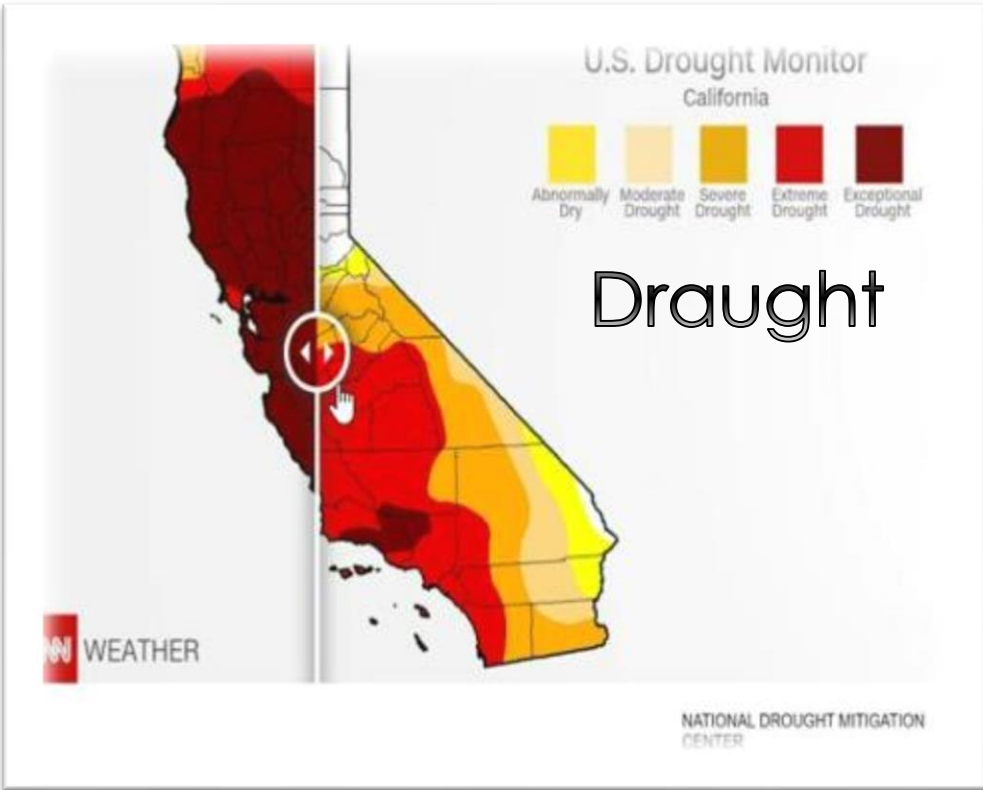

**LA'S DRINKING  
WATER QUALITY  
REPORT**

# DUTIES & CHALLENGES

Sustainability

Dam Safety

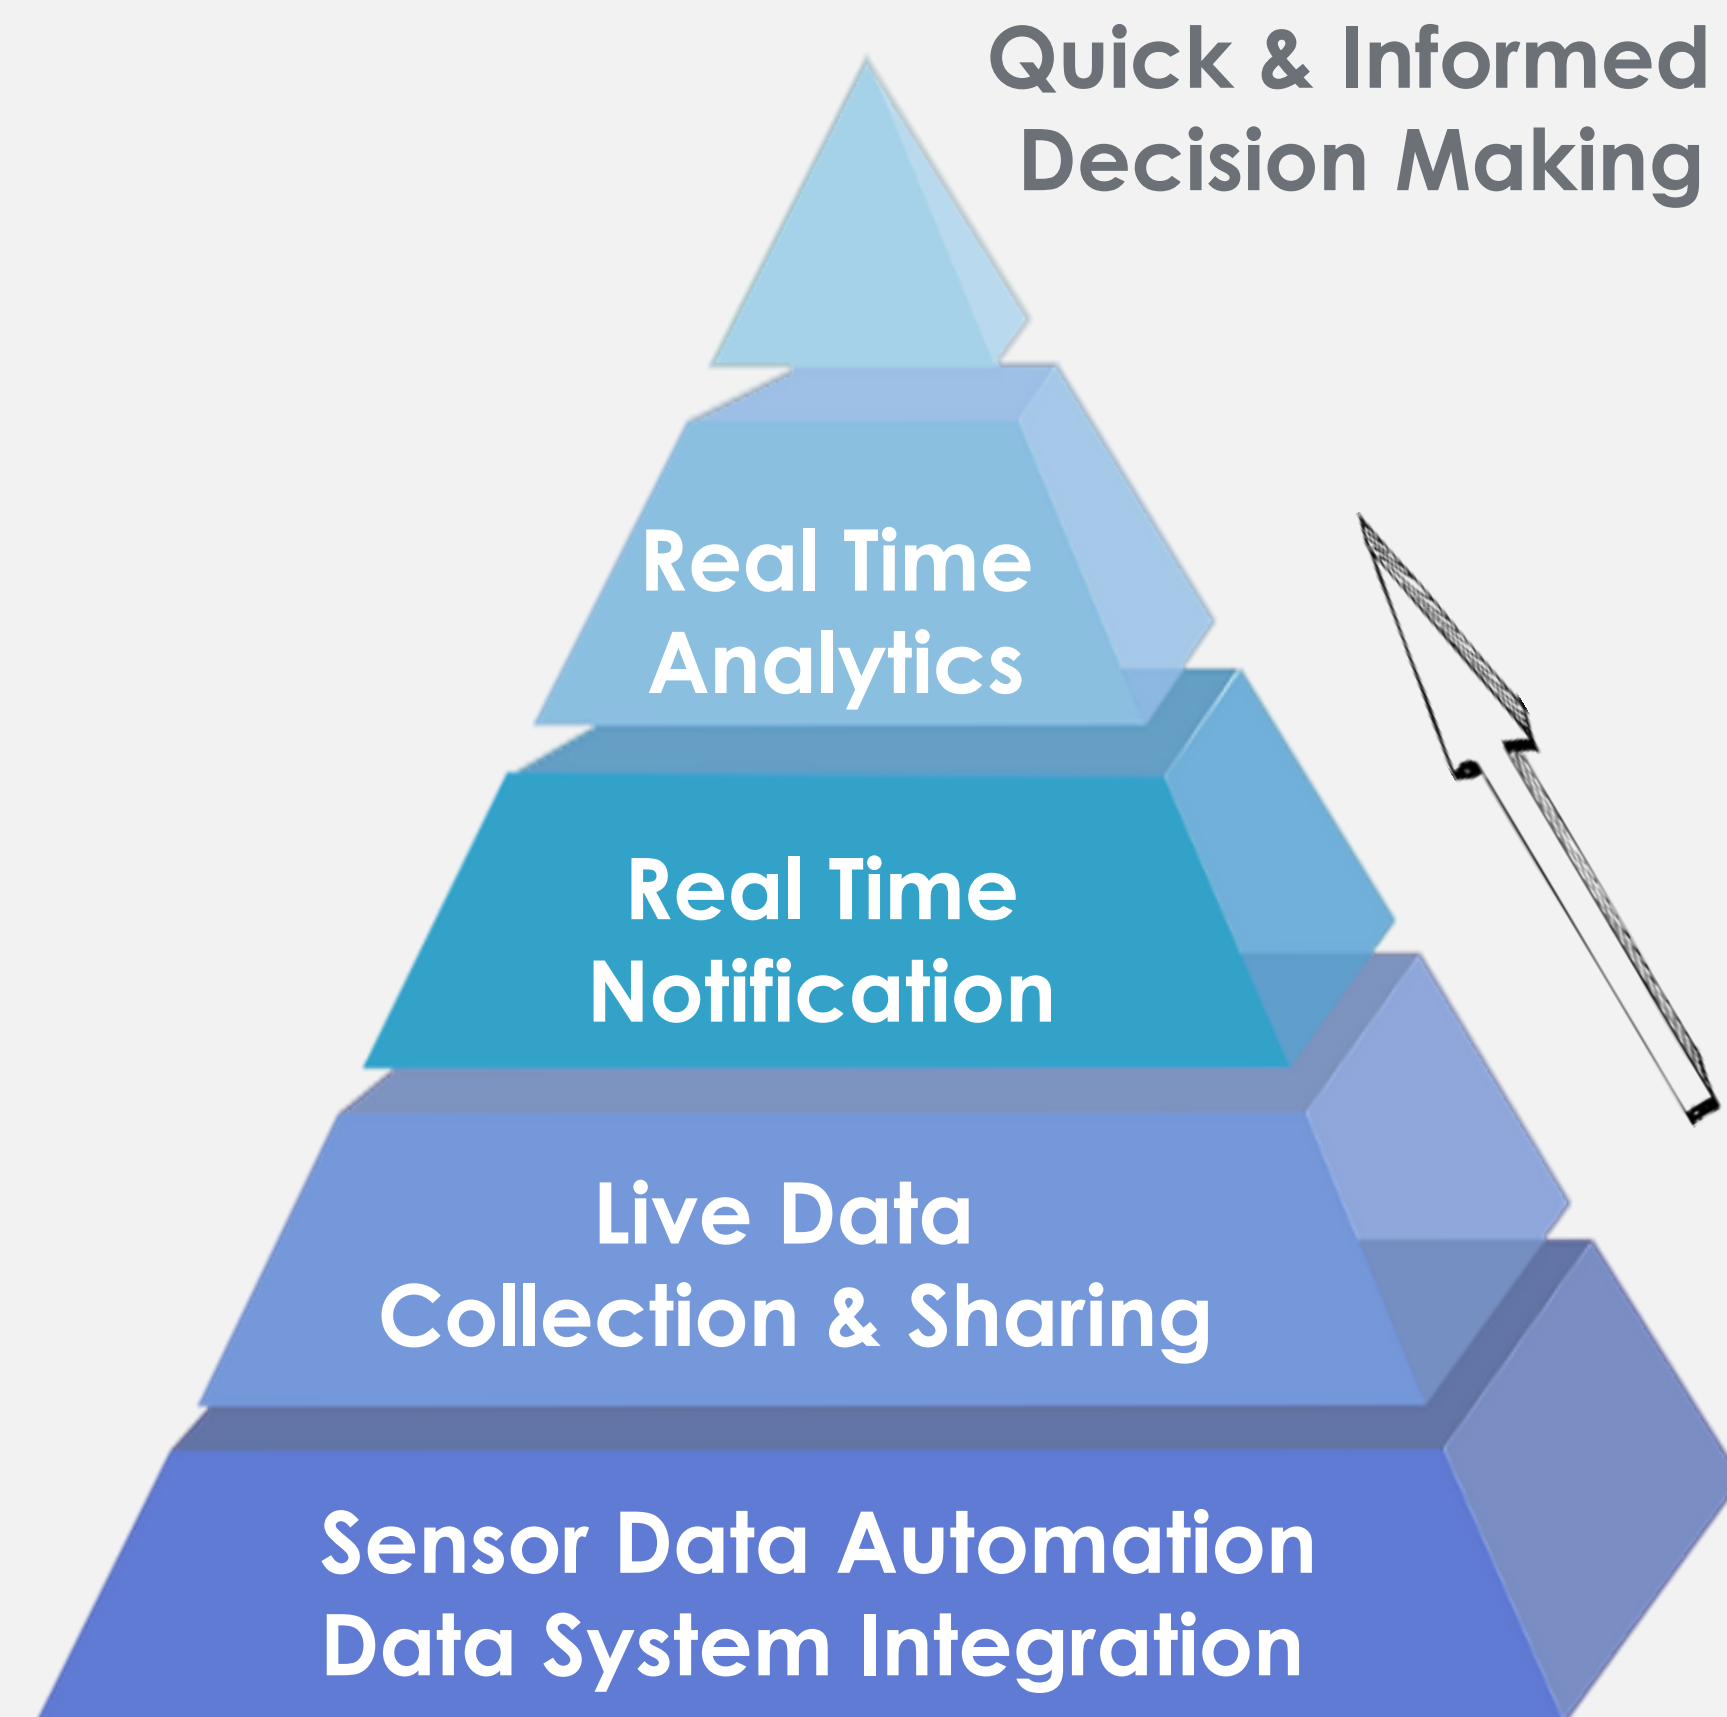

# Intelligent Water Utility

Solution to Water System Challenges – The Data Component

## HOW?

## Identified LADWP Water System Technology Goals

- Automated online monitoring and data collection
- Innovative methods to capture knowledge
- Improved communication with customers on leaks and conservation
- Analytical decision support tools for data driven decision-making

**Water Information Network (WIN) Project is an important component to achieve the goals.**

# WATER SYSTEM CURRENT DATA SYSTEMS

- ❖ Best of Breed
- ❖ Both New Tech & Legacy
- ❖ Both In-House & Vendor Customizations
- ❖ Both On-Premise & Cloud
- ❖ Not Fully Integrated

### Time Series Data

#### SCADA

- Control Functions
- Critical
- Operational
- High Security

#### PI Historian

- Non Control Functions
- Critical & Non Critical
- Operational
- Low Security

### Relational Data

#### CMMS

- Work Order Tracking
- Asset Management
- High Security

#### Customer Billing System

### Spatial Data

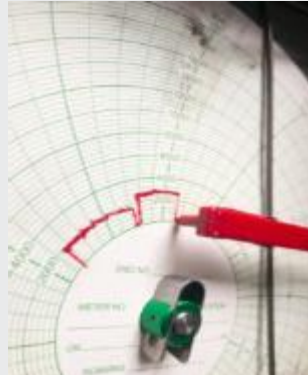

#### Spatial Data

- Maps & Locations

### File Data

#### Any Type of Applications

Reports, Logs, Paper Charts

#### In-House Development

## Data Type

## Data Collecting System

### Scenario: Equipment Repair

1. SCADA or Historians detect sensor reading anomalies
2. Analytics are performed to determine equipment needs repairing
3. SCADA or Historian then trigger Maximo work order
4. Crew is dispatched to inspect and repair the damage, and is able to access records and drawings of the equipment as well as to navigate and log findings using GIS Apps
5. Work is done and closed out in real time, all field and office data is logged onto system

# Water Information Network (WIN) Project

**GOALS – Centralize All Water System Data, Remove Data Silos, Collect New Edge Data, and Integrate Systems**

## Deliverables (June 2020)

USER REQUIREMENT STUDY & GROWN PLAN

INTELLIGENT WATER UTILITY ROAD MAP

ESTABLISH A PI SYSTEM

5 + PILOTS FOR FIVE DIVISIONS

## As of Now

120+ Use Cases identified, started growth estimates

Initiated research and internal investigations

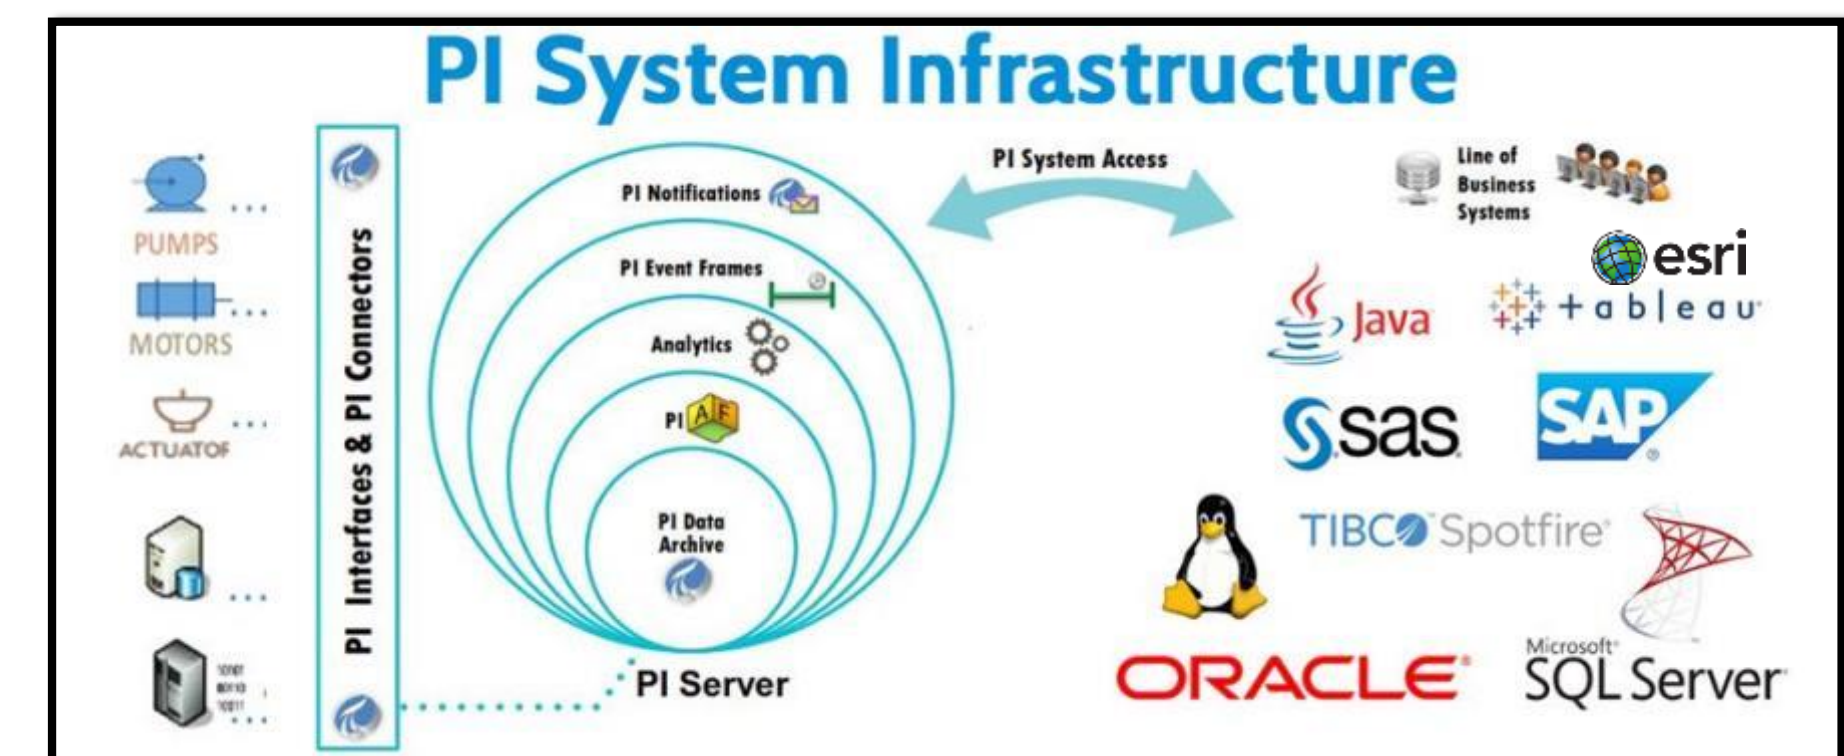

Built PI system with 30,000 data points

Initiated 3 Pilot Use Cases

## Discoveries

DISCOVERIES

- Internal and external talents, many technology projects are already on-going
- Multiple stakeholders and complex work flows
- Needs both creativity & technology governance
- System integration is still in its infancy

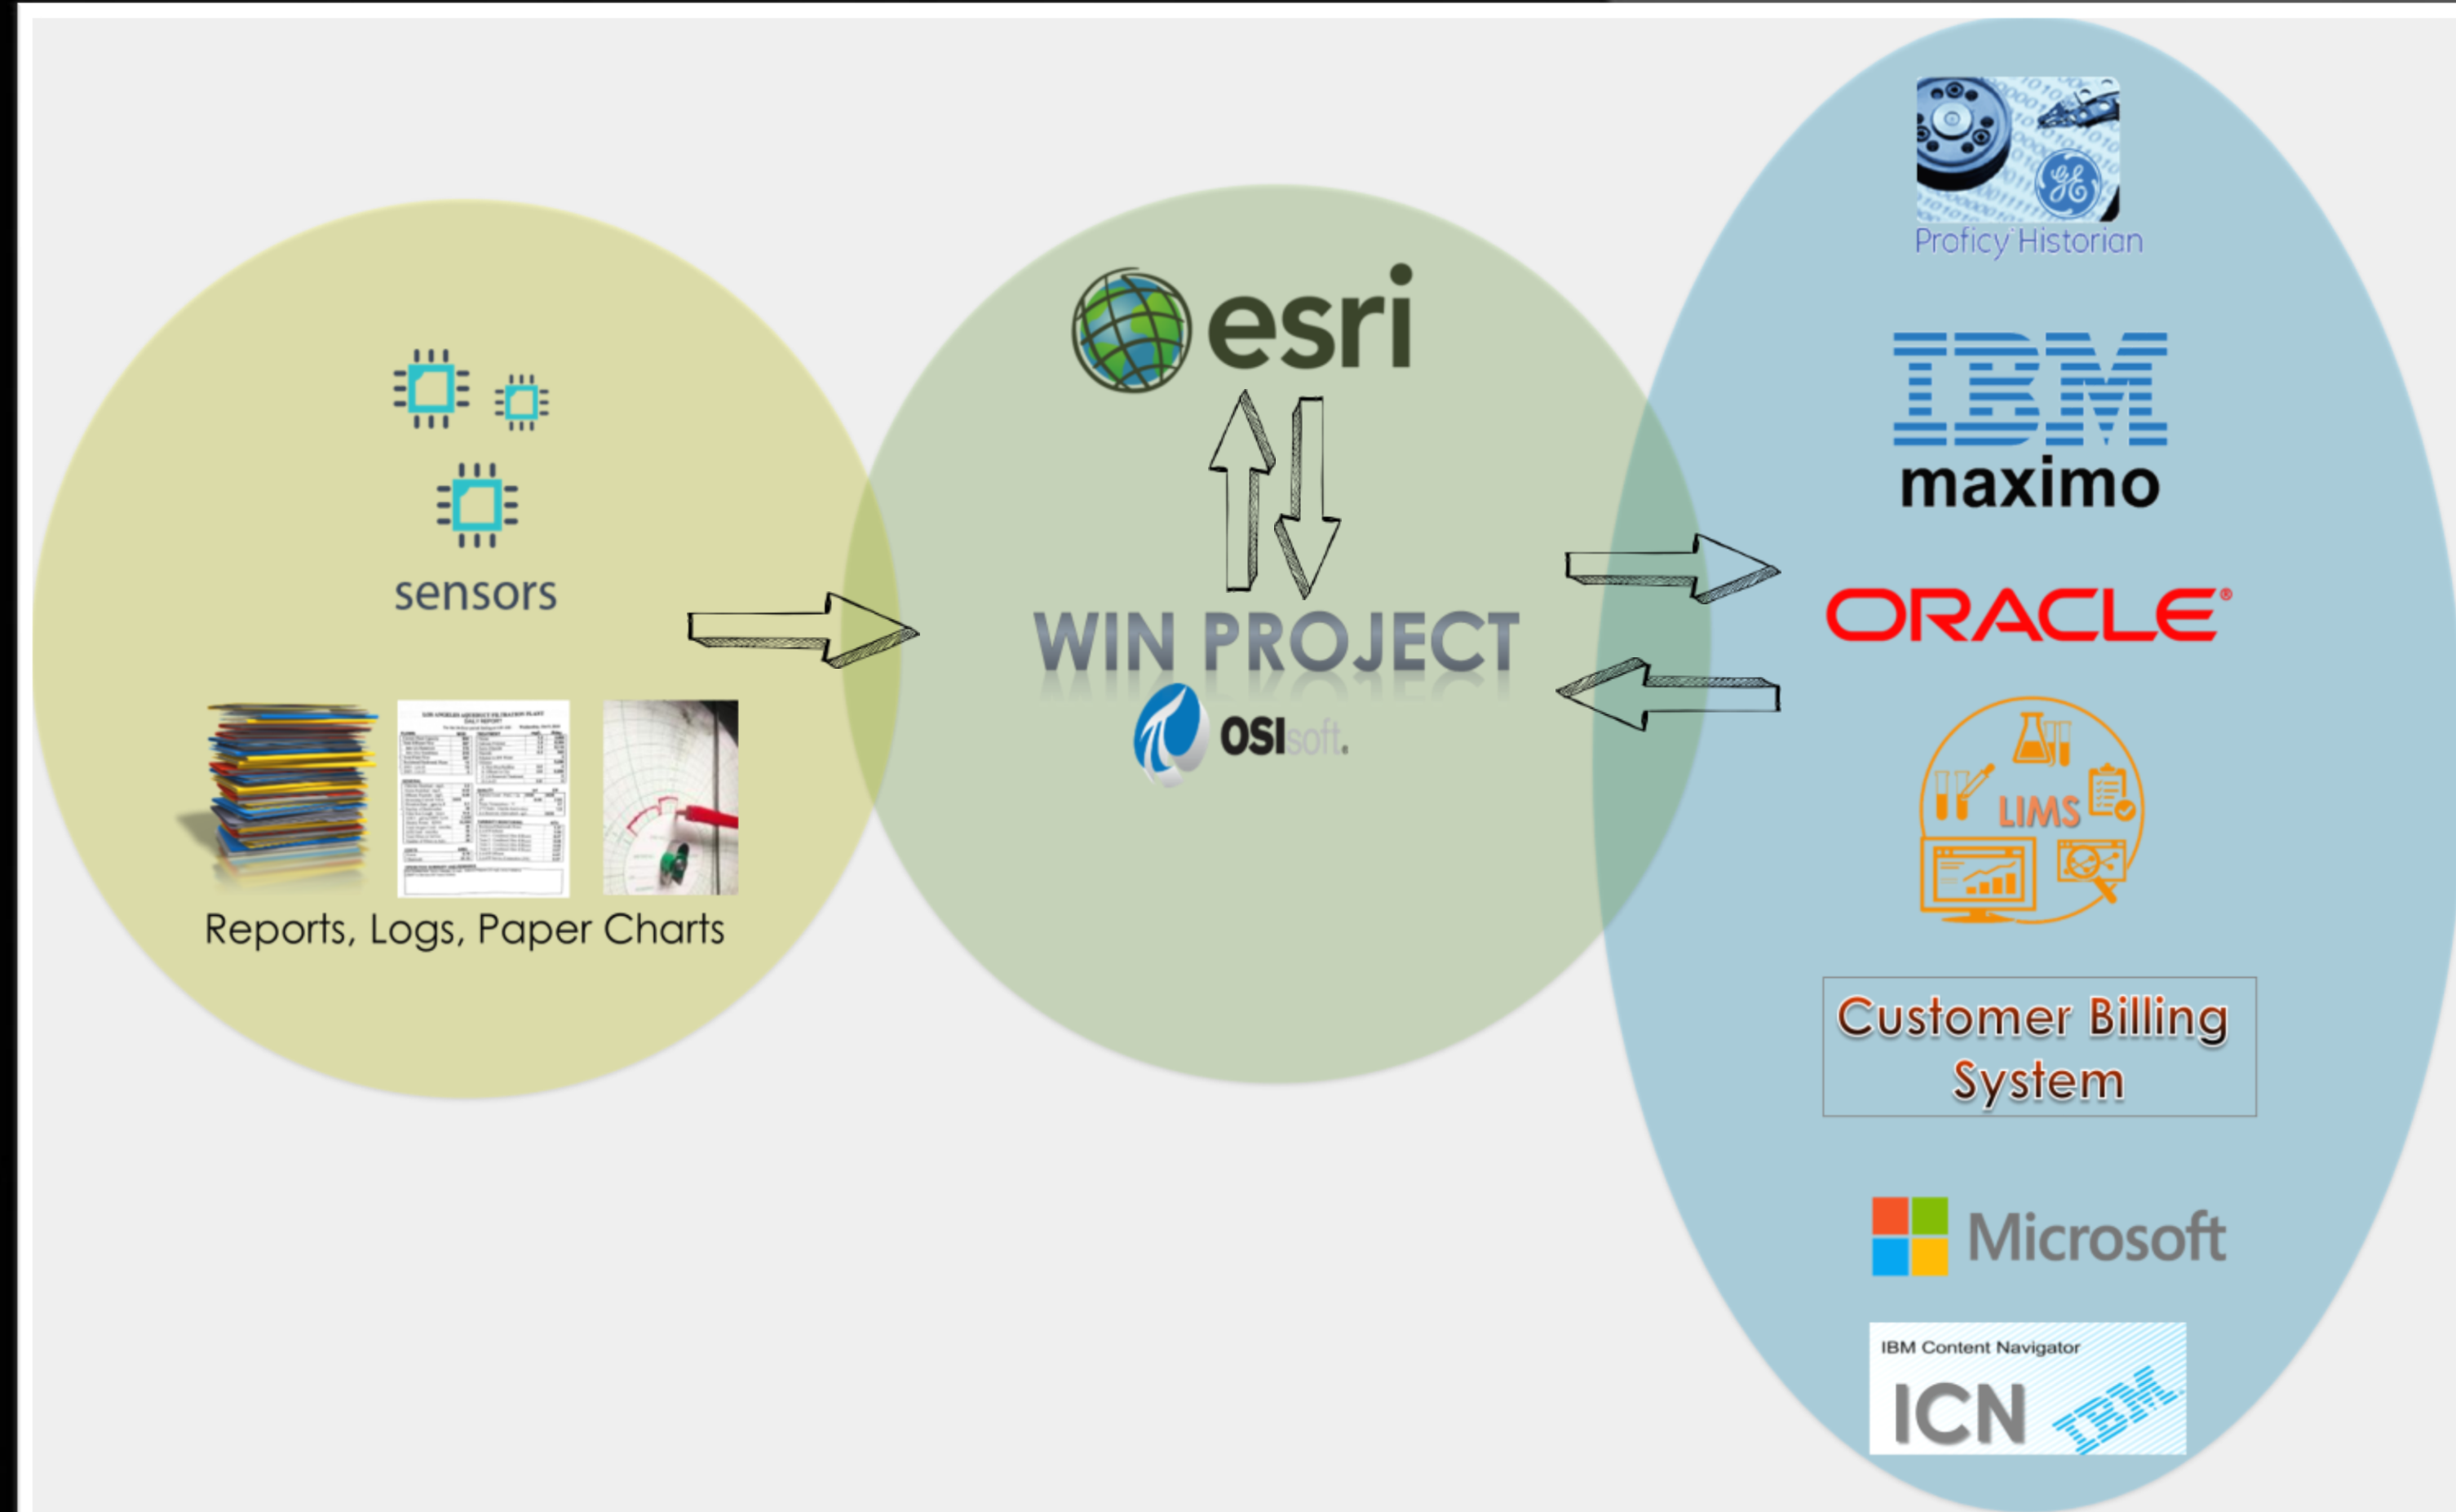

# WIN Project

## Demo

WHY WHAT WHO HOW

## Connect Data Systems

# WIN Project

LADWP INTELLIGENT UTILITY IMPLEMENTATION ROADMAP IS UNDER DEVELOPMENT

# THE WAY FORWARD

# LADWP Intelligent Water Utility Implementation

# Thank You!

# Digital Transformation: Using Data to Drive Operational Efficiency @ Riverside Public Utilities

Robin Glenney, Water Quality Administrator

Brando Crozier, Project Coordinator

# Riverside Public Utilities

23

- Population - 324,000 residents
- Southern California - 60 miles east of Los Angeles
- Established in 1895
- Consumer-owned water & electric utility
- 81 square mile service territory
- 112,000 electric meters
- 65,000 water meters

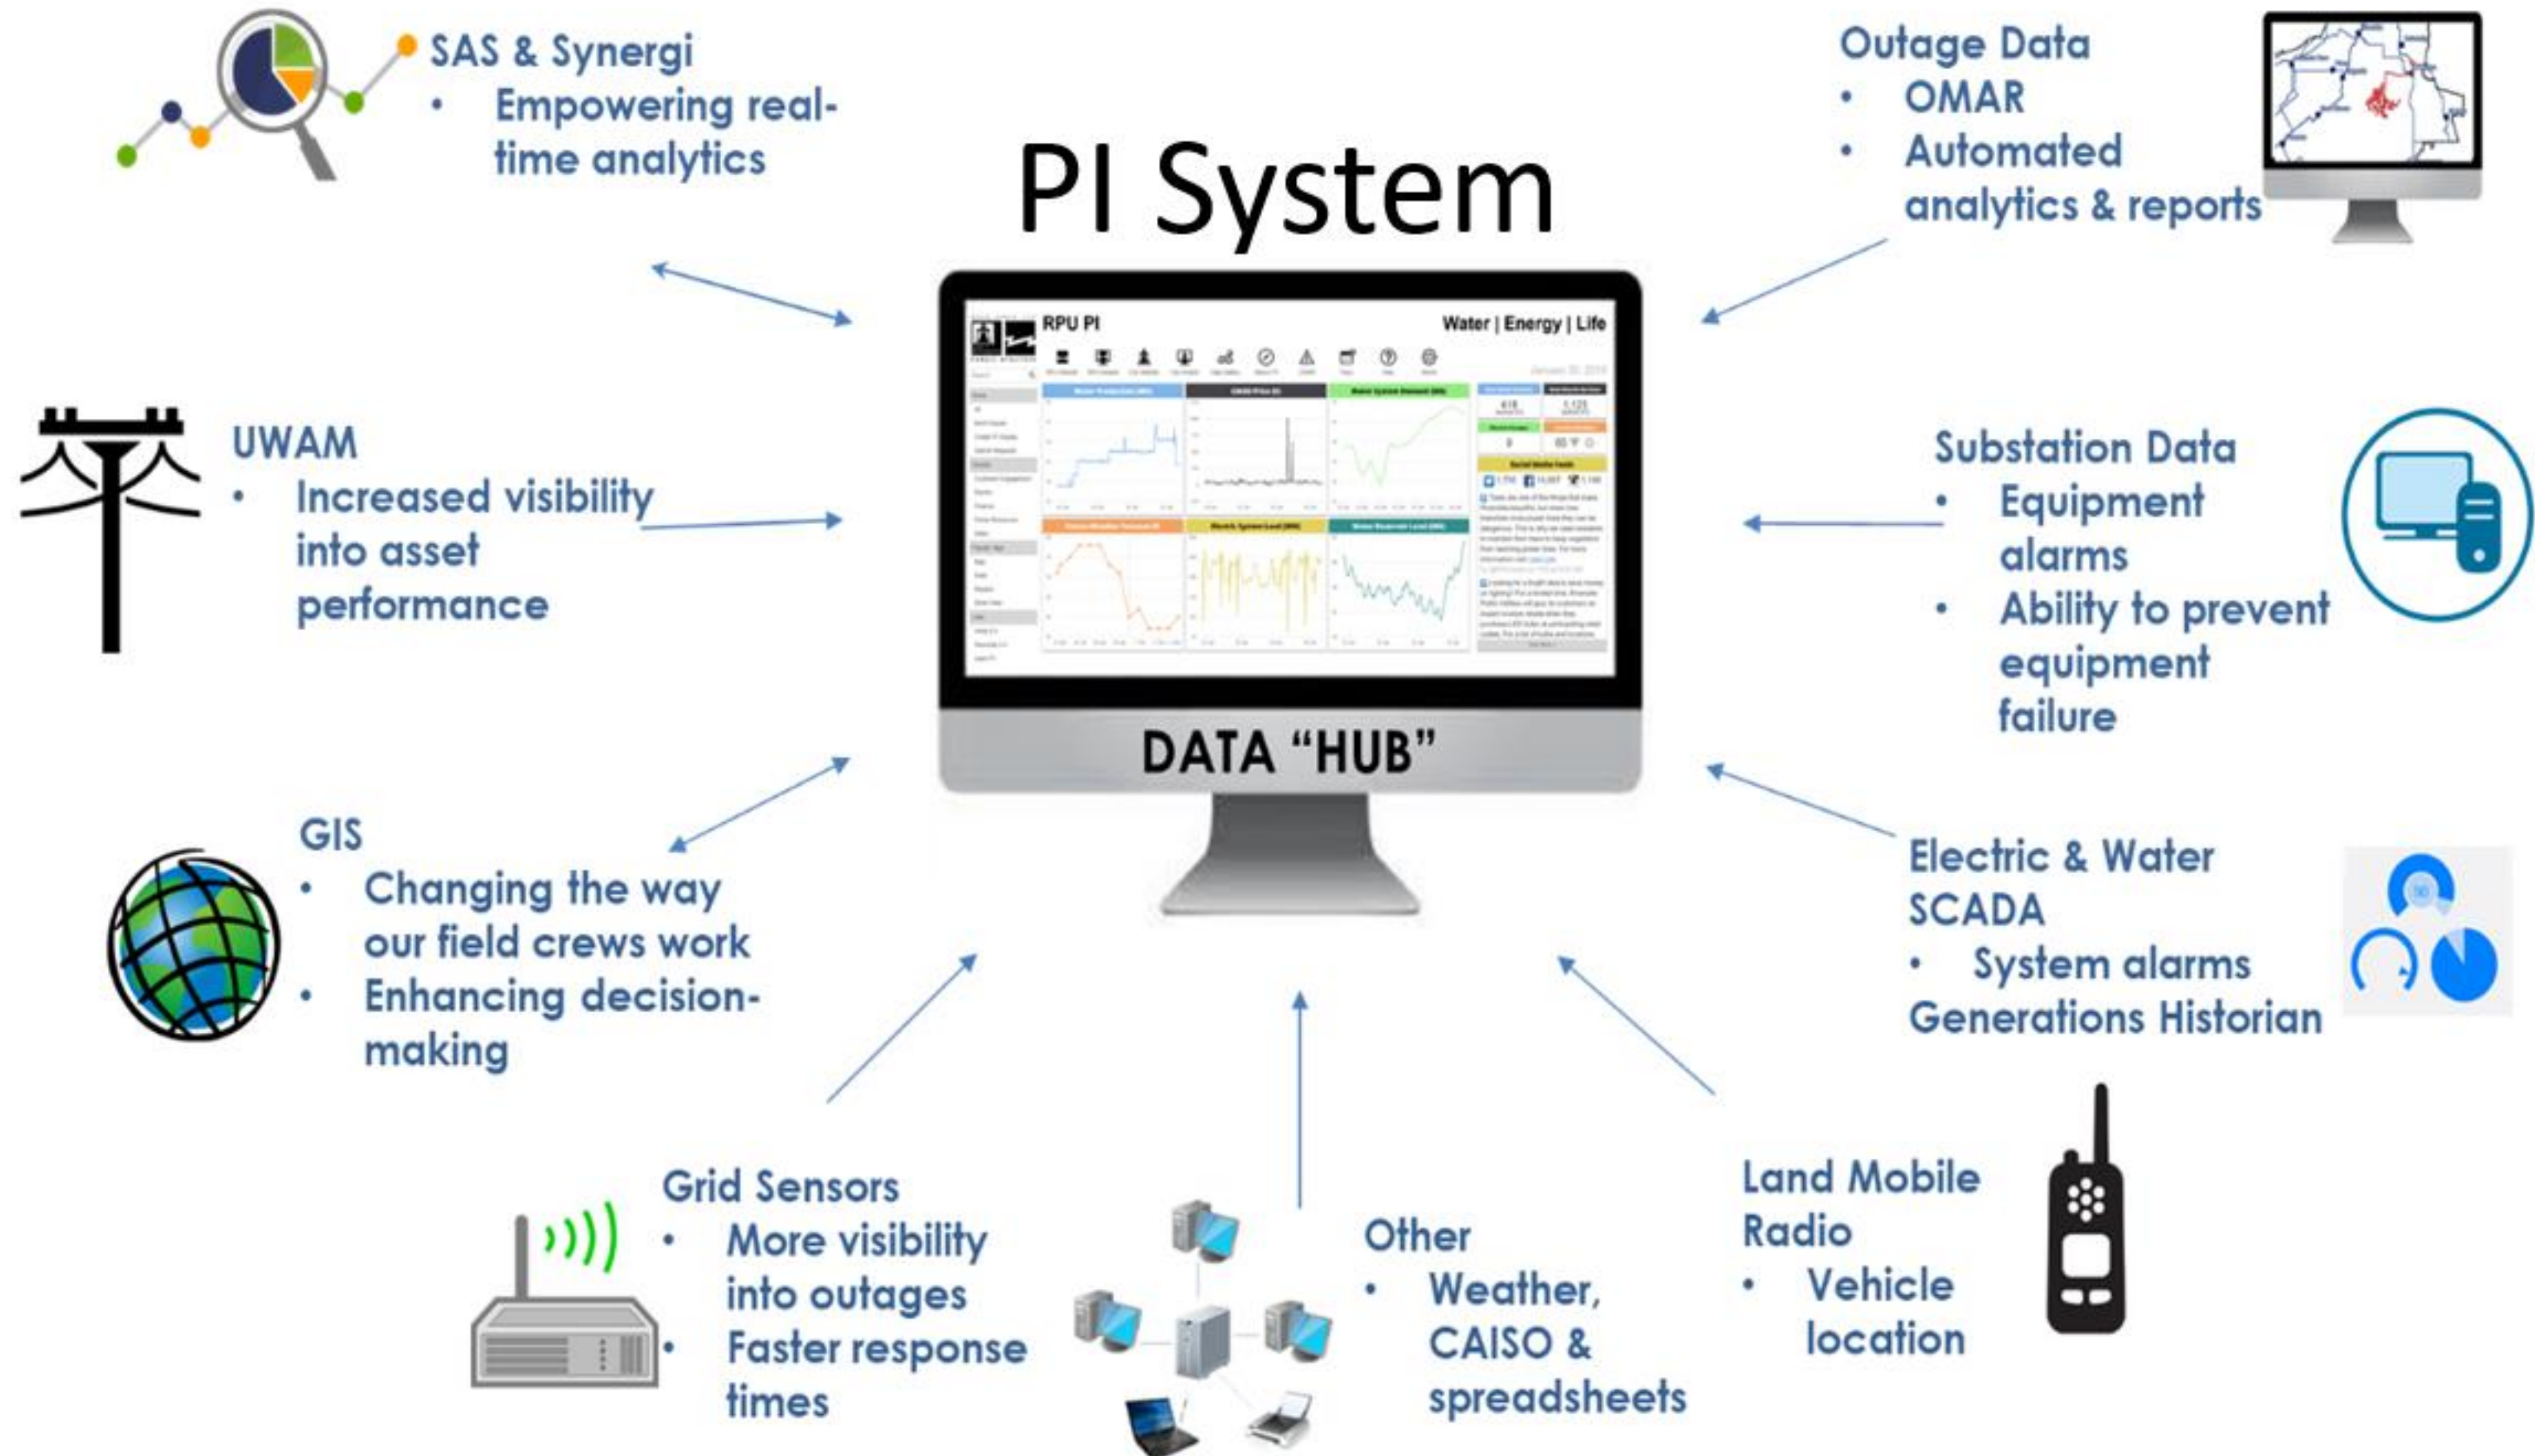

# Background

- All divisions within RPU rely on data to make operational and fiscal decisions
- Hundreds of Thousands of data points are collected daily
- RPU recognized the need to move away from storing data in various formats and disparate systems
- In response to this need, RPU implemented OSIsoft PI System in 2016

# OSIsoft PI System – Data Hub

25

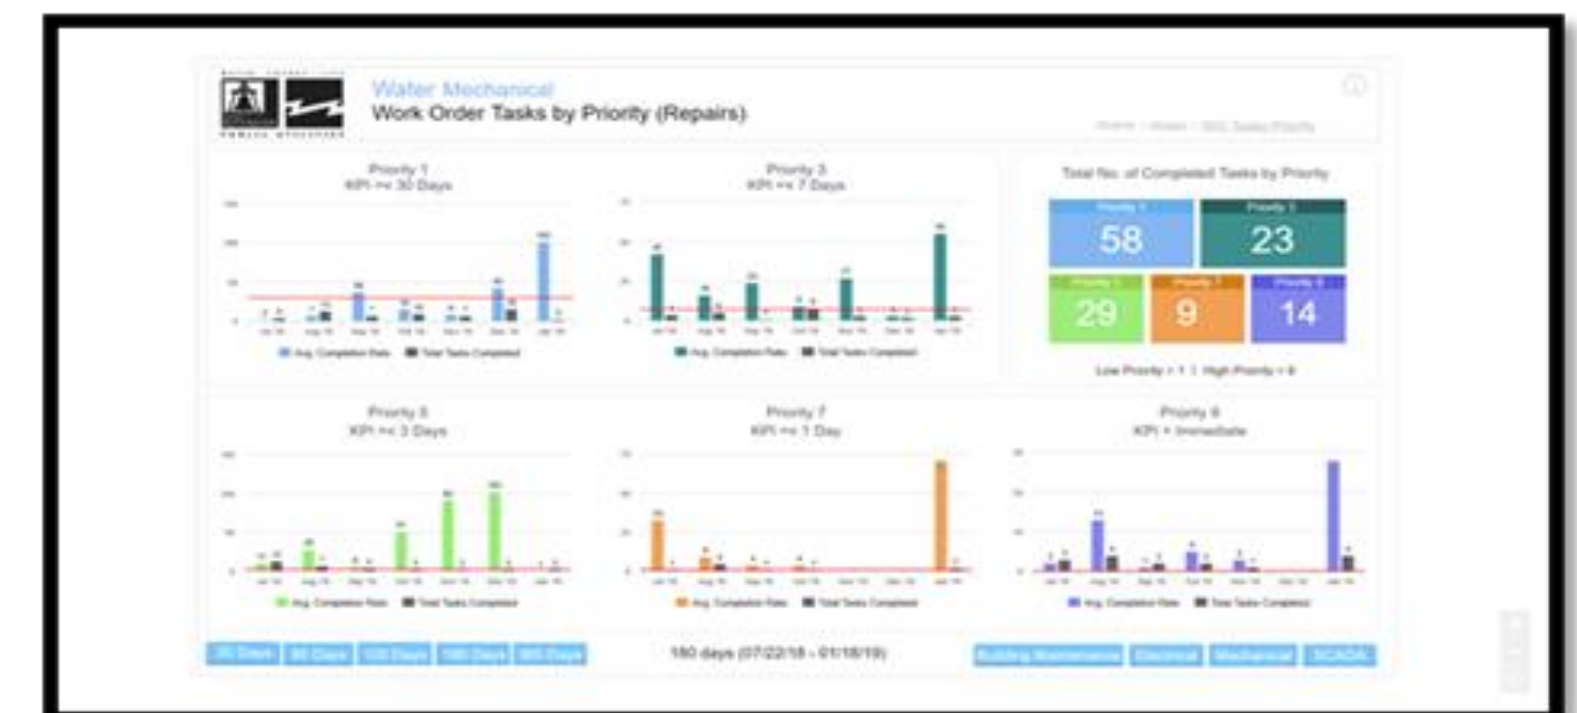

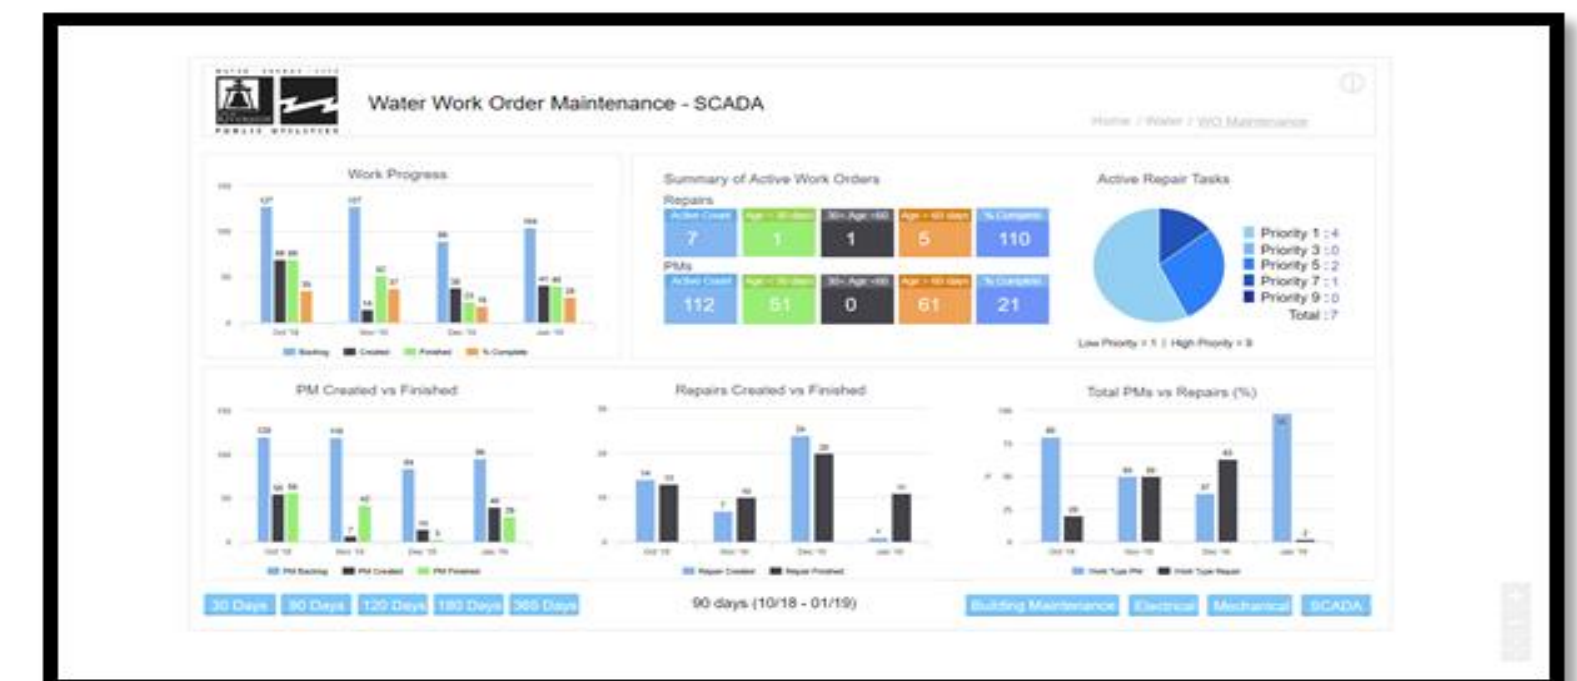

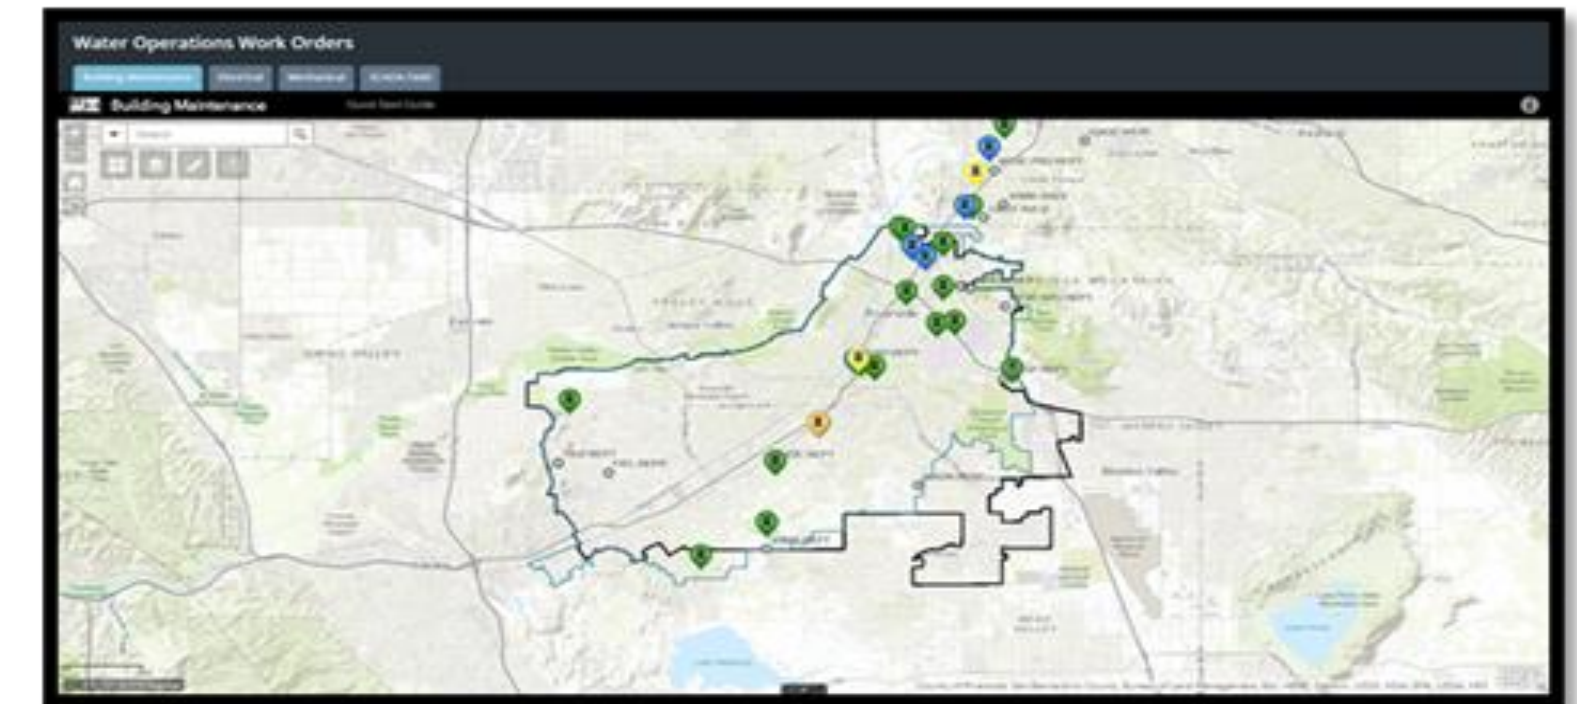

# Examples of PI System Benefits

26

- Improved operational efficiencies
- Reduced staff time by automating processes
- Increased visibility into systems and assets
- Improved system reliability
- Reduced operating costs
- Advanced methods for monitoring CAISO market activity

# Status of PI Implementation

27

- Currently in 4<sup>th</sup> year of 5-year Enterprise Agreement with OSIsoft
- PI team supports entire Utility (Water, Electric, Generation)

- 2 full-time PI Consultants

- 1 Analyst (50% time)
- 1 Database Developer (50%)
- Sr. GIS Analyst (supports GIS integration)
- Training / developing Super Users
  - Intro, Advanced, Advanced 2.0, and customized on-site courses
  - OSIsoft self-paced on-line courses
- 30 integrated systems
- Many operating dashboards, display and alerts

# Return on Investment (ROI)

- Since implementing PI, RPU has achieved a return on investment of over \$820,000 per year
- This far surpasses the annual enterprise service cost of the OSIsoft PI system
- Additionally, a significant amount of new development is currently underway that will continue to increase ROI

# RPU'S STORY

## CHALLENGES

- Lots of data in disparate systems
- Time intensive manual reporting
- Limited access to real time operational data

## SOLUTION

- PI as a Data Hub
- Near real time PI Vision displays
- Automated PI DataLink Reports

## BENEFITS

- Easy access to previously difficult to reach data
- Four hours a day saved from day late reporting

“

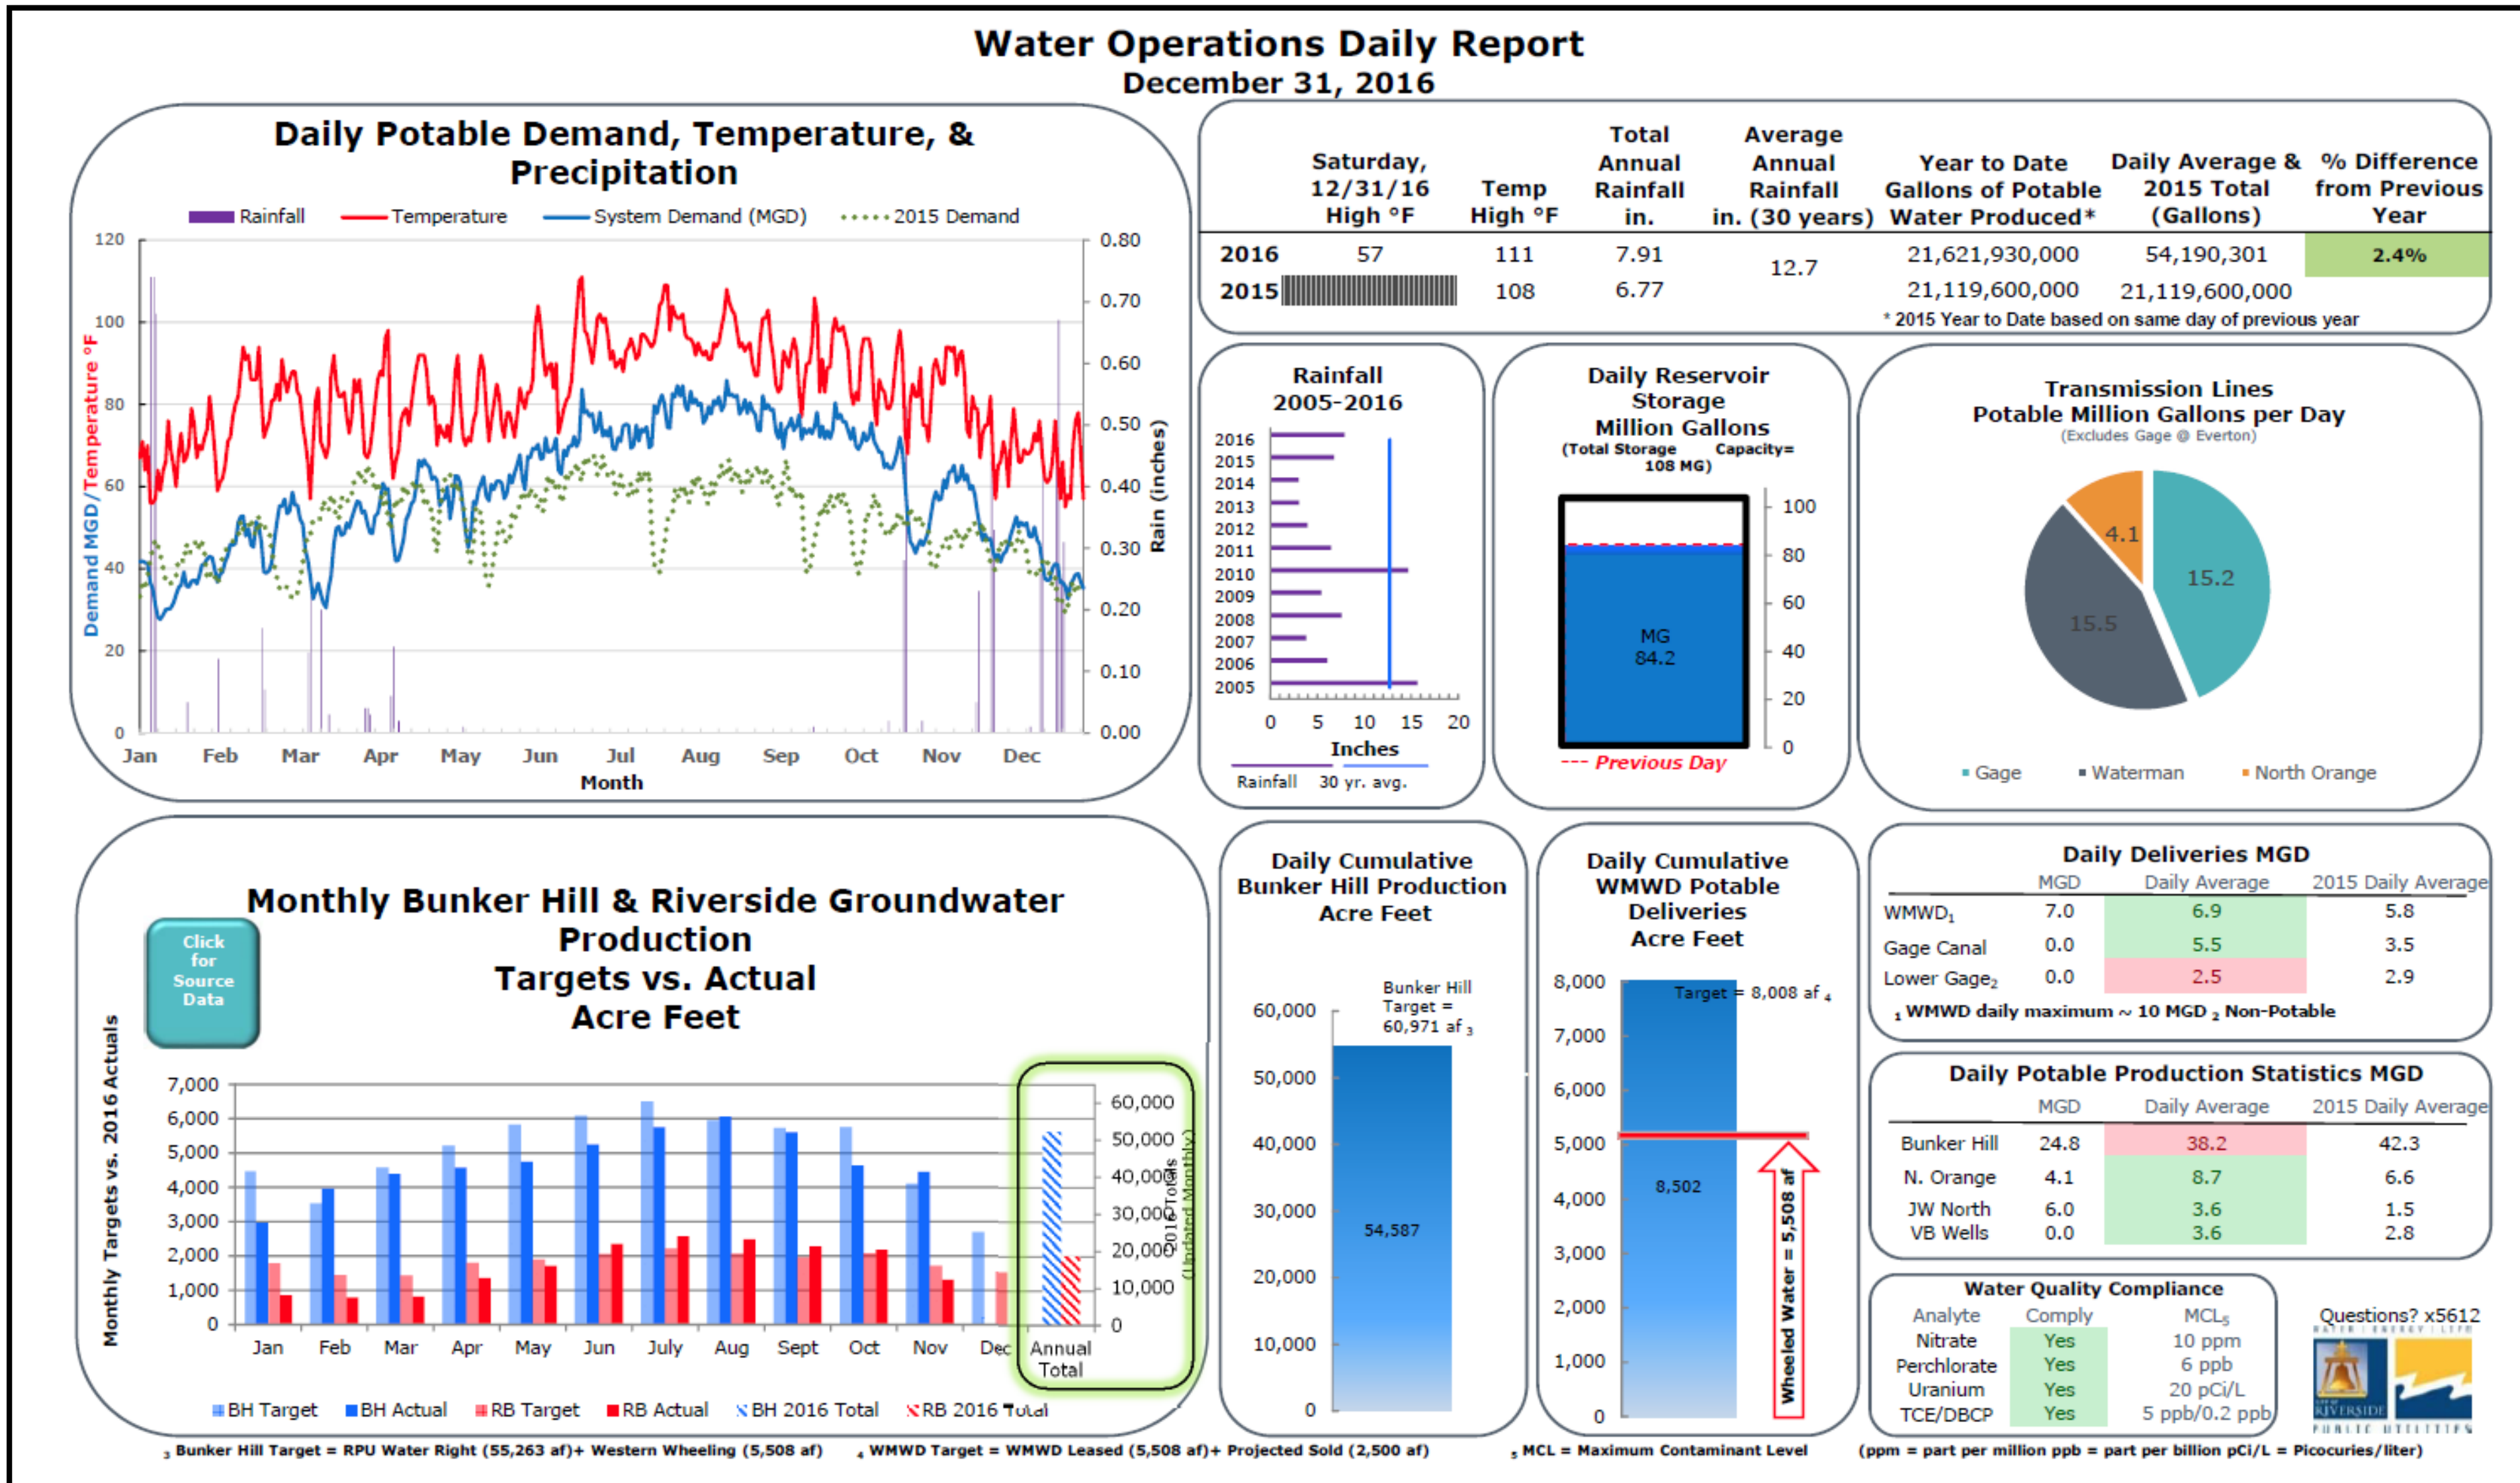

Utilizing PI provides insight into our system in real time, allowing us to make effective operational decisions.

”

<sup>1</sup> For continuous turbidity monitoring, a discrete turbidity value must be taken off the record chart at four hour intervals for S9.										
<b>Note:</b> See Directions on reporting peak recycle, raw, and settled water turbidities.										
Total Number of Samples: <b>186</b> Number of readings <= 0.1 NTU: <b>186</b>										
% Readings <= 0.1 NTU: <b>100.0%</b> Average Effluent NTU: <b>0.03</b>										
<b>Meets Standard</b> (i.e. More than 95% of readings are <= 0.1 NTU) (Y/N)? <b>Yes</b>										
Maximum discrete turbidity value: <b>0.09</b>										
Average percent reduction during the month = [(Average Raw NTU - Average Effluent NTU)/(Average Raw NTU)] x 100% = <b>74.3%</b>										
<b>Meets Standard</b> (i.e. Reduction is greater than 80%) (Y/N)? <b>NO</b>										
<b>Percentile Results:</b>										
xth Percentile NTU Value of all turbidity readings: (x% of all turbidity readings are less than these values)										
50 th = <b>0.03</b>										
90 th = <b>0.03</b>										
95 th = <b>0.04</b>										
98 th = <b>0.04</b>										
99 th = <b>0.04</b>										

# Water Operations - Tomorrow

48

- Future PI enhancements / new development
  - Mobile entry of meter reads for collecting hard read data
    - PI Manual Logger
  - Replication of SCADA screens in PI Vision for increased visibility
  - Tokay integration
