

Using PI Vision to Optimize Wastewater Treatment

Josh Goldman-Torres and Johnny Tran

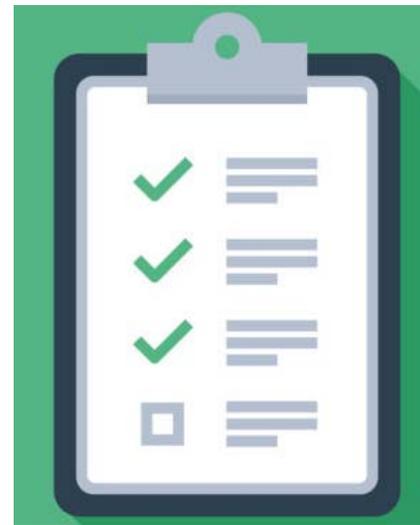

**METRO WASTEWATER
RECLAMATION DISTRICT**

Denver, CO

Agenda

- About Metro Wastewater Reclamation District
- Data Usage Challenge
- PI Vision Use Cases
 - Permit Tracking
 - Power Tracking
 - Process Area Detail
- Business Impact
- New Initiatives
- Conclusion

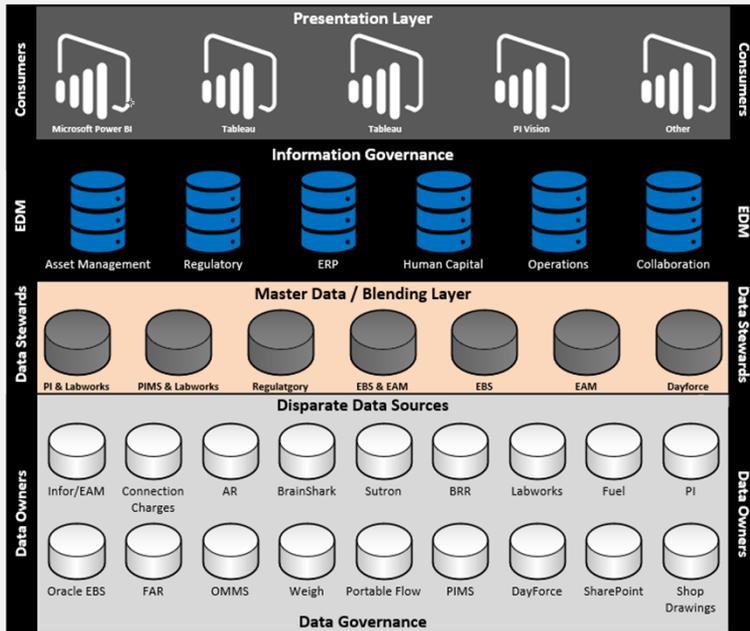

- Large public wastewater utility serving Denver and surrounding suburbs (2M population)
- Average daily flow is 130 mgd
- Secondary treatment with biological nitrogen and phosphorus removal
- Large on-site laboratory
- More than 400 employees
- PI serves as historical and analytical data archiving service
- PI system components
 - PI Archive servers: over 30K tags
 - PI Software: AF, Analysis, Notifications, PI Vision, Datalink, Processbook, Manual Logger
- PI AF developed as an analytical repository
 - Operational data, lab data, financial data

Metro Wastewater Reclamation District

How PI Vision fits into Metro's world

Data Sources and Organization

- Metro Data Store concept
 - How do we evolve from a system of disparate data silos throughout the plant?
 - Common repository of data for all users to access
 - Don't need to know how to access different systems anymore
 - Master data layer extracted from different sources

The Problem

Operational Culture

Operations staff
reliance on
weekly updated
spreadsheet
calculations

Knowledge Gap

It's hard to ask for
changes when
you don't know
what's possible.

Disparate Systems

Many data
sources that
weren't
integrated.

Expertise

Who has the right skill
set to determine the
best use of data and
to develop solutions?

Buy-In

How to convince
incorporate new
visualizations into
our process?

Current Procedures

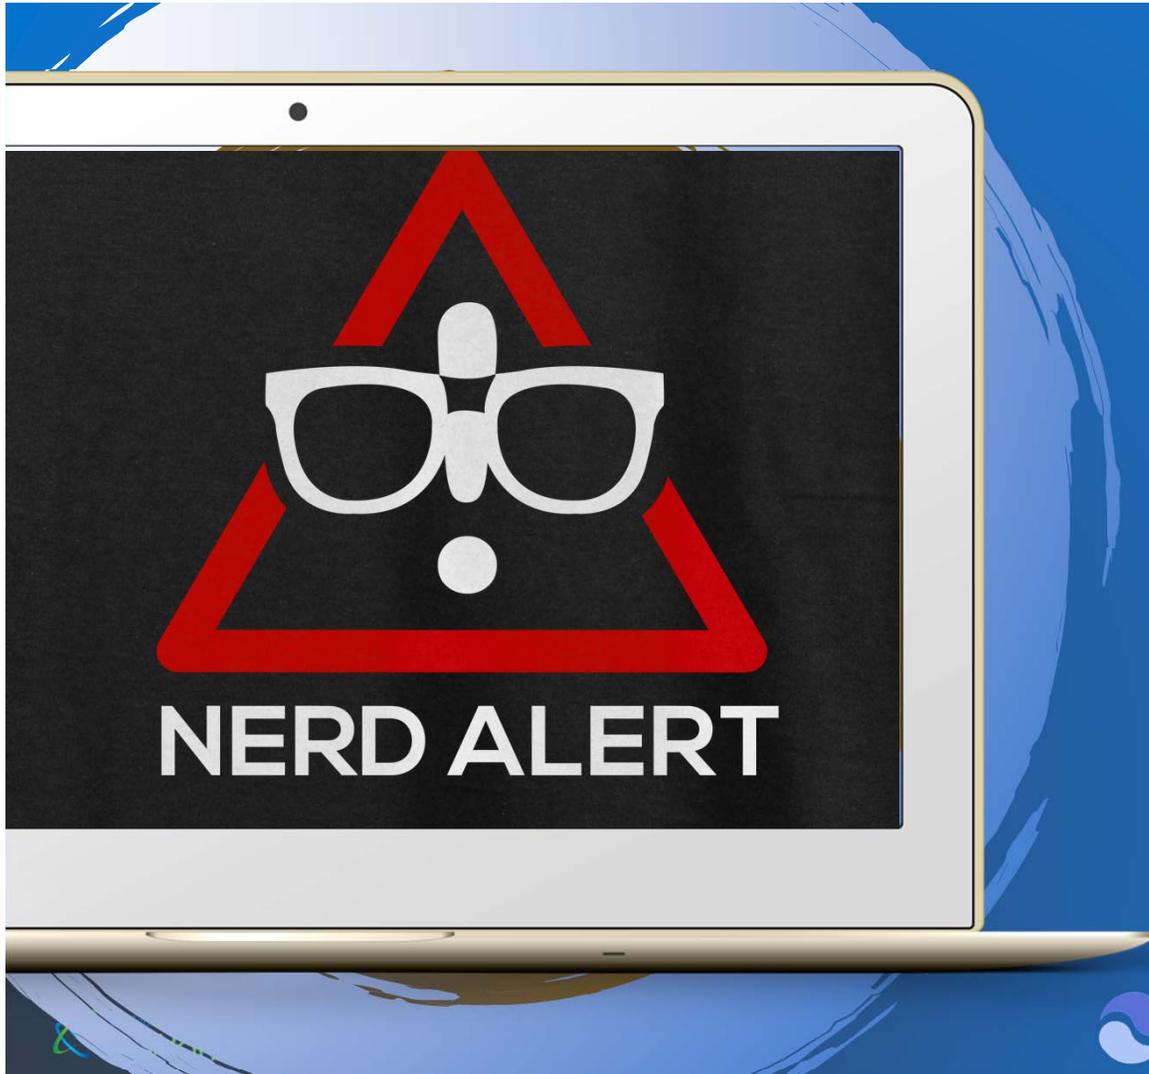

Several steps, increased chance of errors, limited data availability

Weekly Target Data Gathering

- Legacy system text-based reporting (cut and paste)
- Process books
- Excel calculations
- Print and post

Targets for:		Dec 1 - Dec 8										December 2, 2019	
Area	Parameter	Data Source	Permit Limit 30 day	Permit Limit 7 day	Daily Max	Target	Do Not Exceed - DNE	7 day Avg	Month to Date	% of Permit	Baseline	Action	
NPDES TSS, CBOD, E.coli, NH ₃ , NO ₃ , TIN	TSS, mg/L	NSFEQ	30	45		16.5	30	14.8	15.2	50.7%		DAILY - Monitor NSFEQ ODS Report: daily & week-to-date averages	
	CBOD, mg/L	NSFEQ	17	25		10	17	4.8	4.8	28.2%			
	E coli	NSFEQ	126	252		50	80	60.2	60.2	47.8%			
	Ammonia	NSFEQ	5.10			1.0		0.76	0.86	16.3%	30D: <89% of Target - Month to Date		
	Ammonia Daily Max, mg/L	NSFEQ				9.20		0.94	0.94	10.2%		December 2019: Combined NH3 Effluent Limit: 30D: 5.10 mg/L; Daily Max 9.20 mg/L	
	Nitrate + nitrite, mg/L	NSFEQ				9.80	6.94	4.60	4.60	46.9%	Max Daily 7d & Max Daily MTD	December 2019: Combined NO5 Effluent Limit: Daily Max 9.8 mg/L	
TIN	NSFEQ						5.20	5.20					
NH ₃	NSEC NH3, mg/L	NIT				<1.0		0.50	0.70				
	NSEC NH3 Daily Max, mol	NFEQ						1.27	1.28				
	SSEC NH3, mg/L	SFEQ				<1.0		0.42	0.46				
	SSEC NH3 Daily Max, mol	SFEQ						0.62	0.62				

Collaboration:
Technology and
Innovation
IT
Operations

Optimization Improvement Example 1 – Permit Tracking

Must meet permitted discharge limits of several water quality parameters

Legacy Process

- Legacy system text based reporting (cut and paste)
- Cut/Paste
- Excel calculations
- Print and post

Targets for:	Dec 1 - Dec 8										December 2, 2019	
Area	Parameter	Data Source	Permit Limit 30 day	Permit Limit 7 day	Dailey Max	Target	Do Not Exceed - DNE	7 day Avg	Month to Date	% of Permit	Baseline	Action
NPDES TSS, CBOD, E.coli, NH ₃ , NO ₅ , TIN	TSS, mg/L	NSFEQ	30	45		16.5	30	14.8	15.2	50.7%		DAILY - Monitor NSFEQ ODS Report: daily & week-to-date averages
	CBOD, mg/L	NSFEQ	17	25		10	17	4.8	4.8	28.2%		
	E coli	NSFEQ	126	252		50	80	60.2	60.2	47.8%		
	Ammonia, mg/L	NSFEQ	5.10			1.0		0.76	0.86	16.9%	30D: <89% of Target - Month to Date	
	Ammonia Dailey Max, mg/L	NSFEQ			9.20			0.94	0.94	10.2%		December 2019: Combined NH3 Effluent Limit: 30D: 5.10 mg/L; Daily Max 9.20 mg/L
	Nitrate + nitrite, mg/L	NSFEQ			9.80	6.94		4.60	4.60	46.9%	Max Daily 7d & Max Daily MTD	December 2019: Combined NO5 Effluent Limit: Daily Max 9.8 mg/L
	TIN	NSFEQ						5.20	5.20			
NH ₃	NSEC NH3, mg/L	NIT				<1.0		0.50	0.70			
	NSEC NH3 Daily Max, mg/L	NFEQ						1.27	1.28			
	SSEC NH3, mg/L	SFEQ				<1.0		0.42	0.46			
	SSEC NH3 Daily Max, mg/L	SFEQ						0.62	0.62			

Add a new variable		
Name	Expression	Output Attribute
endTime	<code>TimeStamp(TagVal('Ecoli Daily','*'))</code>	Map
startTime7d	<code>bod(endTime)-(Weekday(endTime)-1)*86400</code>	Map
dataArray7d	<code>RecordedValues('Ecoli Daily',startTime7d,endTime)</code>	Map
product7d	<code>Exp(Total(MapData(dataArray7d,Log(\$val))))</code>	Map
geomean7d	<code>// ln(a) + ln(b) +... = ln(a*b*...) // e^(ln(a*b*...)) = a*b*... if (ArrayLength(dataArray7d) = 0) then NoOutput() else product7d^(1/ArrayLength(dataArray7d))</code>	Ecoli 7d Week-To-Date
startTime30d	<code>Bom(endTime)</code>	Map
dataArray30d	<code>RecordedValues('Ecoli Daily',startTime30d,endTime)</code>	Map
product30d	<code>Exp(Total(MapData(dataArray30d,Log(\$val))))</code>	Map
geomean30d	<code>if (ArrayLength(dataArray30d) = 0) then NoOutput() else product30d^(1/ArrayLength(dataArray30d))</code>	Ecoli 30d Month-To-Date

Optimization Improvement Example 1 – Permit Tracking

Must meet permitted discharge limits of several water quality parameters

Legacy Process

- Legacy system text-based reporting (cut and paste)
- Cut/Paste
- Excel calculations
- Print and post

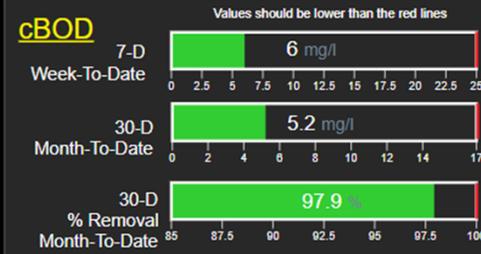

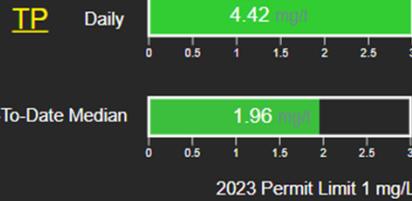

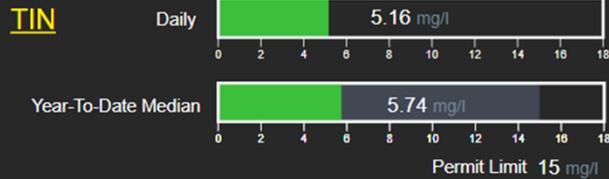

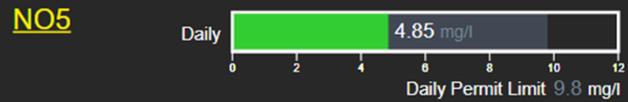

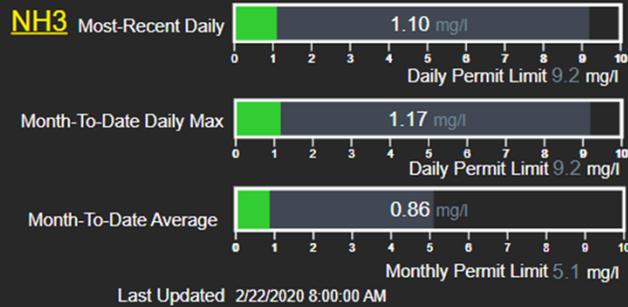

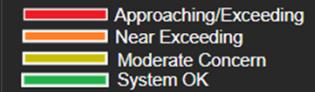

Development

- Technology and innovation worked closely with operations to determine **what data** is most useful and in **what format**
- Creation of **real-time** visualizations to convey information in **more intuitive format**
 - Required use of lab data and online instrumentation data
 - Analyses developed in PI System Explorer
 - Visualization developed in PI Vision

Previous Month

RWHTF Permit Tracking

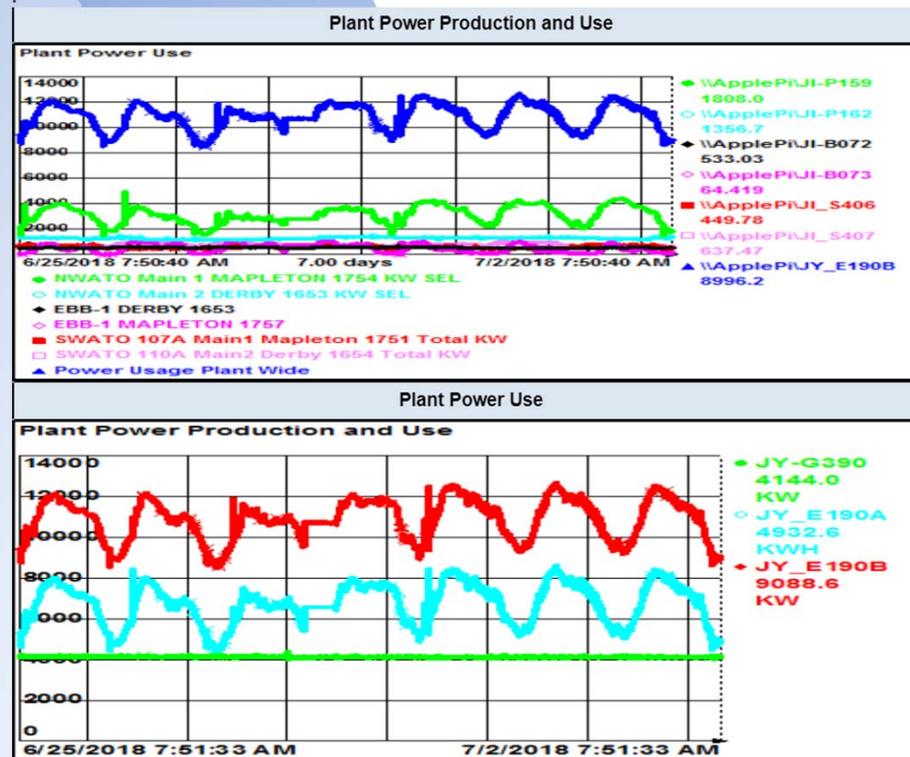

Optimization Improvement Example 1 – Power Tracking

Power usage data can be used to reduce overall power costs

Legacy Process

- PI Process Book
- Screen Shot

Hite Energy and Power Overview

[Power by Process Area](#)
[Electricity Costs Page](#)
[How does the electricity bill work?](#)
[What is Energy?](#)
[What is Demand?](#)

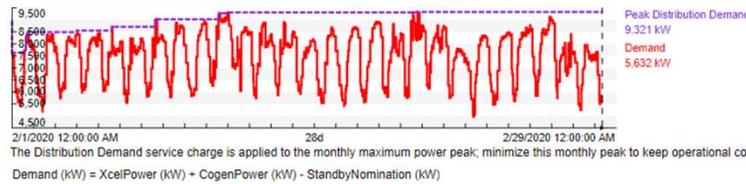

Total Power Usage (Kilowatts)

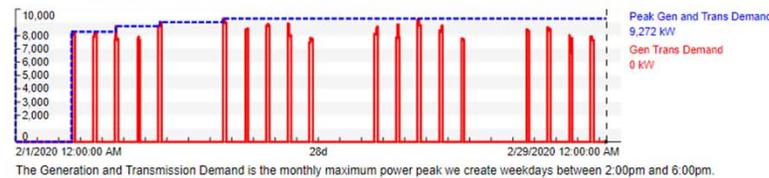

Energy Use (Kilowatt-Hours)

Peak Power - Distribution

Peak Power - Generation and Transmission

Gap: Demand to Peak
3,688 kW

Ok to start?

- North West Blower 1,100 kW
- North East Blower 1,900 kW
- South Blower 1,500 kW
- Primary Effluent Pump 336 kW
- Centrifuge 300 kW

Green means go!

Peak Demand Tracking

	Distribution	Gen. and Trans
Time of Peak	2/19/2020 6:45:01 PM	2/10/2020 2:15:01 PM
Days Since Peak	9 d	18 d
Current Peak	9,321 kW	9,272 kW
November Peak	8,957 kW	8,621 kW

This is a % of last month's peak. Keep it negative to save money!

What's the difference between the two Power Peaks?

Gen and Trans: Very Expensive, up to 4x Distribution

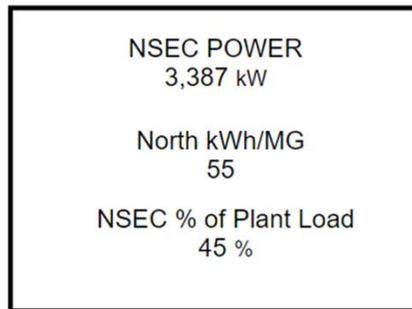

Distribution Price: 3.77 \$/kW
 Transmission Price: 12.64 \$/kW

To save \$, avoid starting machinery on weekdays between 2-6pm when possible!

Solids Metrics

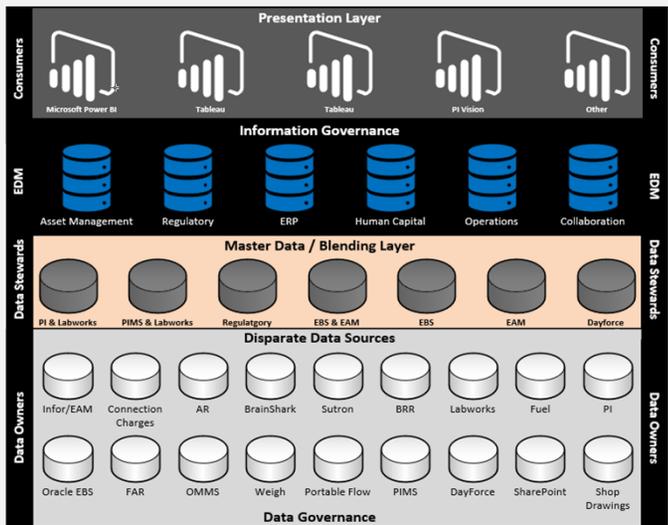

Business Impact

Smarter operations

- **Time Savings**
 - Several hours per week required to generate and physically post Weekly Target spreadsheets
 - Time required to digest information and make decisions
- **Cost Savings**
 - Still being quantified
 - Working on real-time quantification of cost savings
- **Intangibles**
 - All staff gain better understanding of how data analytics can be used to optimize processes
 - Bridge the gap between operators and plant data

New Initiatives

- Advanced analytics for prediction of performance
- Pull data from AF through PI Web API using Alteryx, R
- Run statistical models, neural network models
- Write predictive data back to PI AF through PI Web API using Alteryx and R

Conclusions

- **MWRD invested in data optimization**
 - Created Technology and Innovation Division
 - Purchased PI Vision
- **Collaboration between teams**
 - TID, IT, Operations
- **Conversion of Weekly Target Process**
- **Advanced Data Analytics**
- **Benefits**
 - Time
 - Money
 - Intangibles
