# Where Digitalization comes to life

BASF Antwerp / Batenburg Magion

Presented by: Luc van Lakwijk, Petra Roefs, Oscar van Duijn

**AVEVA**

**No. 1**  
in chemistry

**361**  
production sites

**111,047**  
employees

**78.6**  
billion euro  
turnover

**7,8**  
billion euro  
Operational profit

2021

## BASF AROUND THE WORLD

# BASF PORTFOLIO

## Chemicals

Petrochemicals  
Intermediates

## Materials

Performance Materials  
Monomers

## Industrial Solutions

Dispersions & Pigments  
Performance Chemicals

## Surface Technologies

Catalysts  
Coatings

## Nutrition & Care

Care Chemicals  
Nutrition & Health

## Agricultural Solutions

# A HEALTHY COMPANY

BASF ANTWERP

7.3

billion euro turnover

948.4

million euro operating profit

2021

# Innovations for a sustainable future

## Challenge

- Digitalization is a corporate strategy of BASF, it's a key differentiator to position us as leading chemical supplier for our customers, new technologies are introduced, requirements for our real-time data platform are increasing

## Solution

- Implemented a state-of-the-art AVEVA PI System landscape, applied extensive change management to achieve successful onboarding of the users to the new platform

## Benefits

- Enables us to implement new use cases like batch/lot registration with event frames, product stock calculations and reporting, daily reports on production and consumption, dashboards for utility usage
- Towards the future strategy we fit for purpose

# Business Challenge

## Reliability

A fast, reliable,  
high available &  
scalable system

## Data Quality

100% data  
integrity,  
reliable data

## Context

Meaningful and  
understandable  
data

## Connectivity

Easy data  
provisioning to  
data consumers

# Business Challenge

## Reliability

Redundancy on  
Server level

## Data Quality

Redundancy on  
Interfacing level

## Context

PI AF  
Seeq

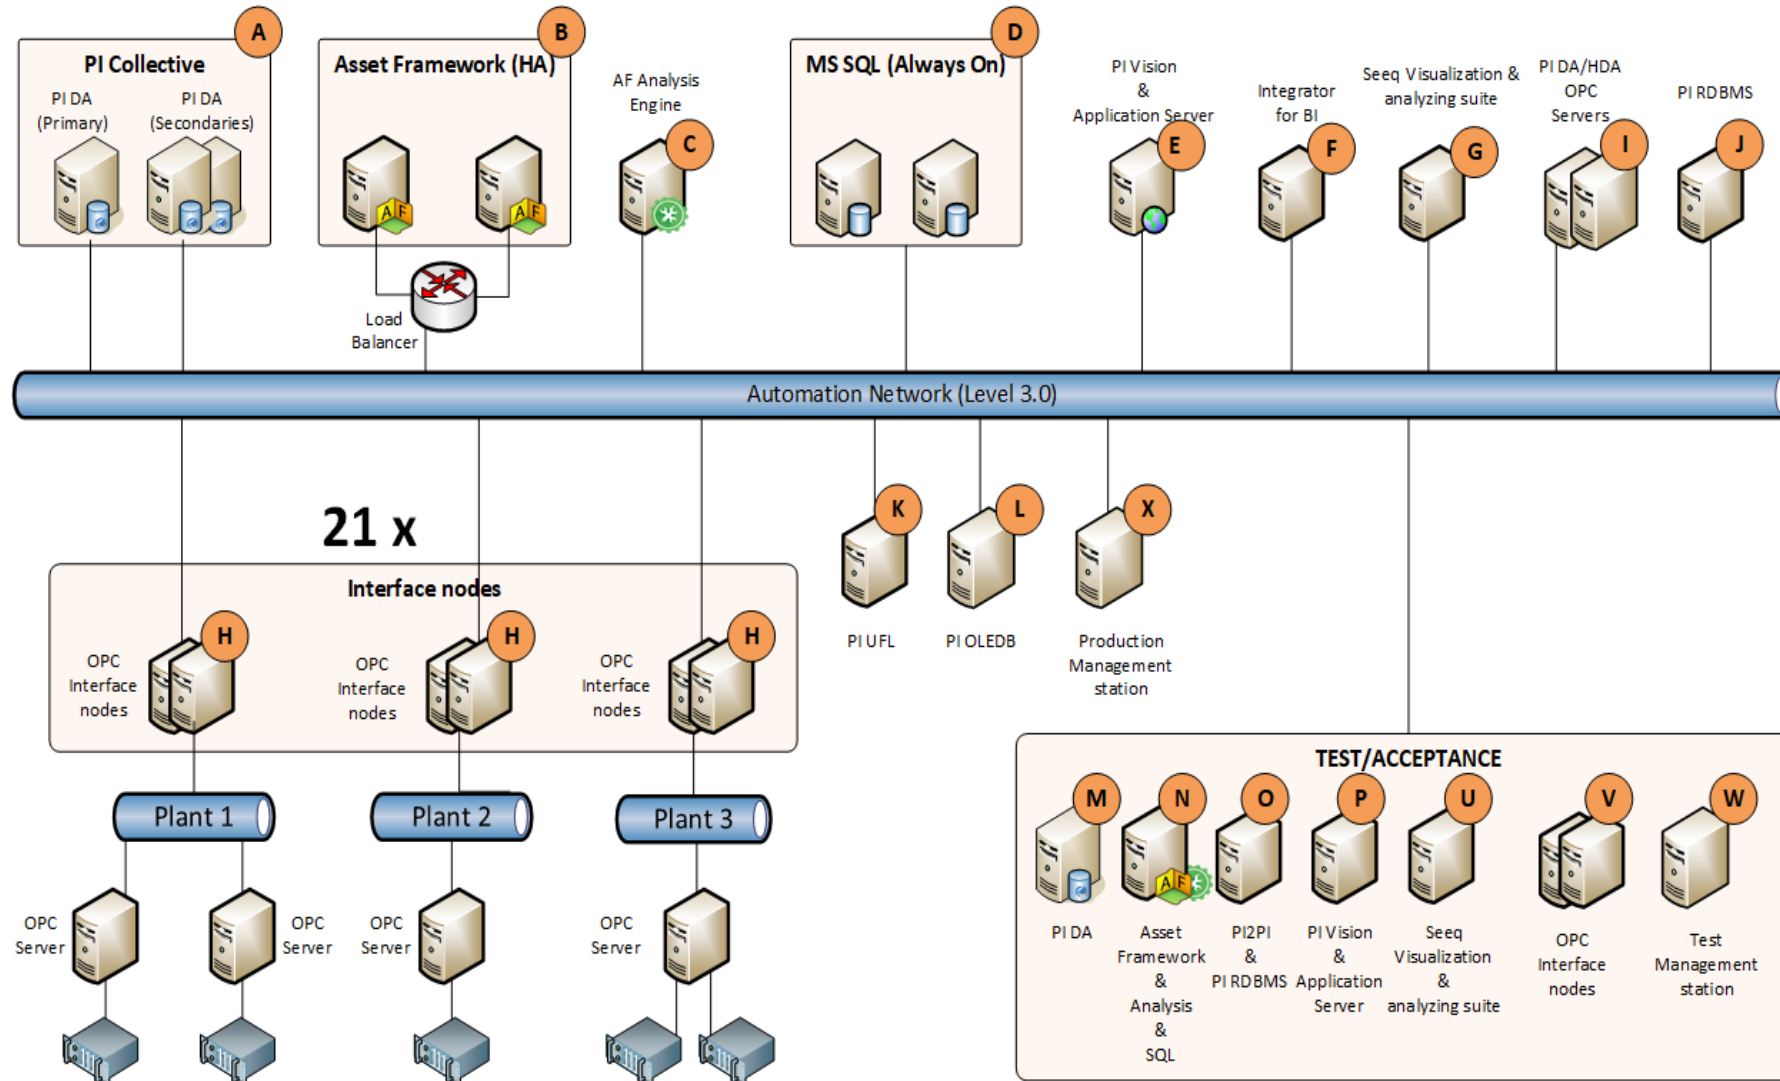

## Connectivity

BI, WebAPI,  
OLEDB,...

# Technical overview

# Infrastructure on-premise

## Setup

- ❖ Local infrastructure hosted by external partner
- ❖ High Available (DHCI), HP Nimble
- ❖ Integrated in the BASF domain and compliant with the BASF security guidelines
- ❖ Each Rack in different physical location

## Points of attention

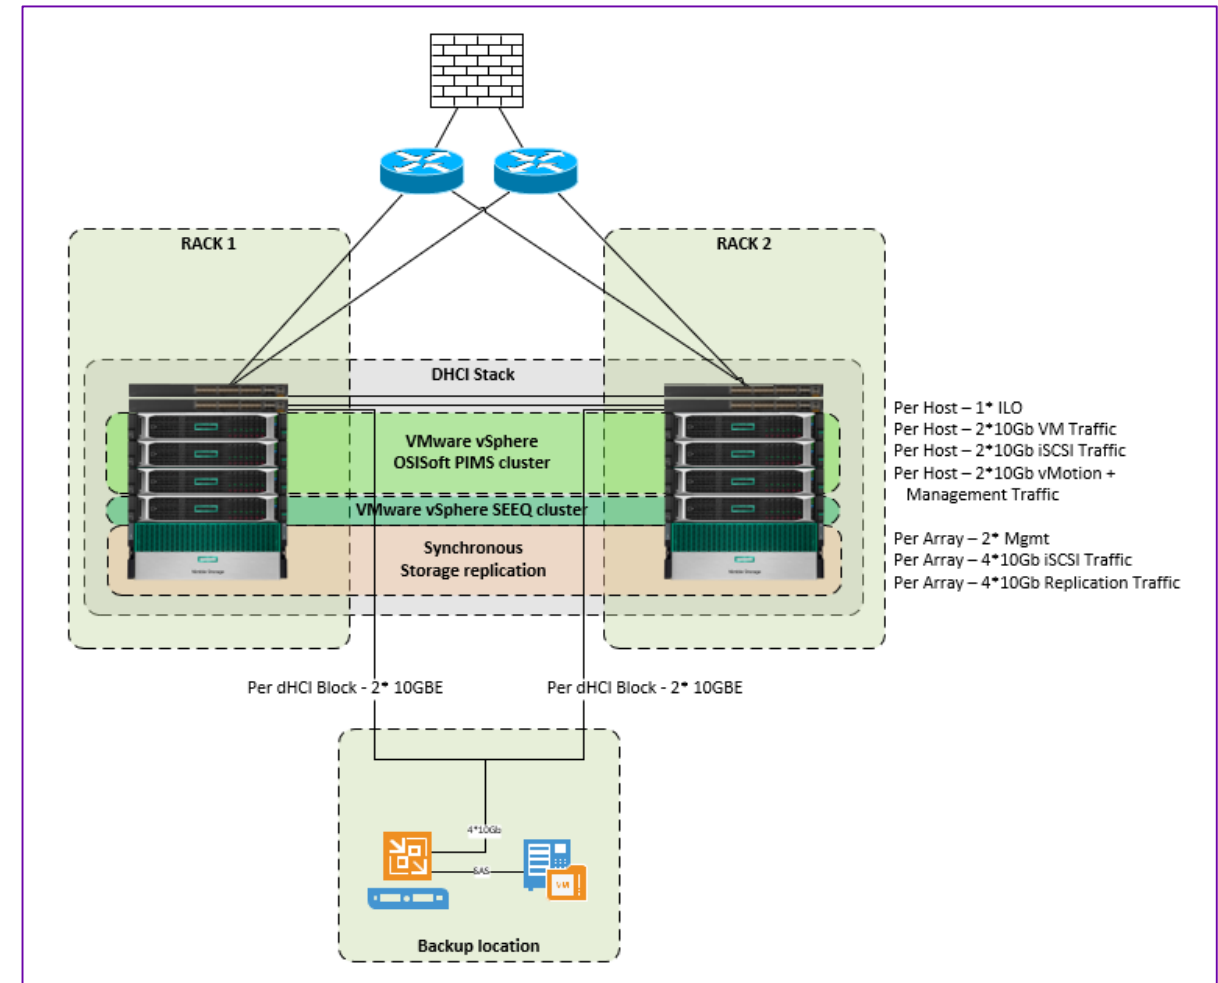

- ❖ Need good procedures between BASF and partner
  - ❖ Regarding Patching
  - ❖ How to react on problems
  - ❖ Who's responsible for which topics

## Benefits

- ❖ Flexible adjustments of RAM, CPU, new server
- ❖ On premise infrastructure is more stable solution
- ❖ Risiko mitigation in case of fire in datacenter => 2 physical locations for our redundant setup

# Batch/lot registration with event frames

## Usecase

- ❖ Batch data collected in different excels per reactor
- ❖ Manual input and correction for defining a batch => Time consuming
- ❖ No standard in the Excels => high maintenance

## Solution

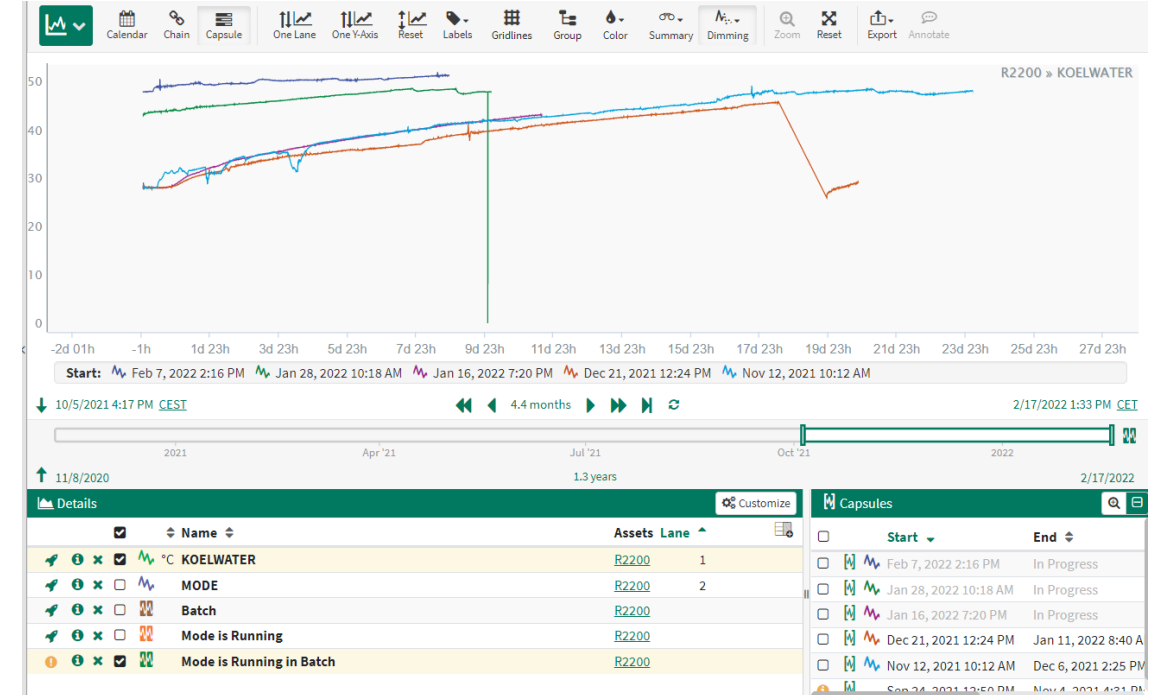

- ❖ Generate an Event Frame in AF for each batch based on collected status tags
- ❖ Calculating for each eventframe = batch the production total, the used raw materials and create a unique EventID
- ❖ Display the events in Reporting Tool Seeq

## Benefits

- ❖ Accurate start and stop time of batch; Realtime follow up
- ❖ No manual action required in Excel => worktime saved, no mistakes
- ❖ More specific calculations can be visualized during the batch eventframe => increased understanding of the process

➤ Example: Temperature profile of cooling water during batch

➤ Other example: Pressure drop during batch

# Reporting of Accurate Product stock

## Usecase

- ❖ A Product can be stored in multiple tanks; tank can be used for several products (not at once)
- ❖ Everytime another product is produced in a tank, the product Planning in Excel needs to be manually adjusted => delay and no accurate planning
- ❖ Production and logistics are not working with the same stock levels
- ❖ ERP has no accurate product stock data available => decrease sales

## Solution

- ❖ Make 'virtual' product tanks in AF and calculate the stock levels per product regardless in which physical tank the product is stored
- ❖ Use this 'virtual' product level in the Product Planning Excel and visualized in PI Vision
- ❖ Automated Product stock feed to ERP

## Benefits

- ❖ Everyone is looking at the same product stock levels
- ❖ Realtime and Accurate product planning can be done without knowing the physical location of the product
- ❖ Accurate stock planning in ERP => increased sales

Tank	Product	%	Ton

# Utility usage vs production

## Usecase

- ❖ Create a Utilities cockpit per installation
- ❖ Get more insight of the usage of utilities during production
- ❖ Generate a report where the correlation between usage of utilities vs production is visible

## Solution

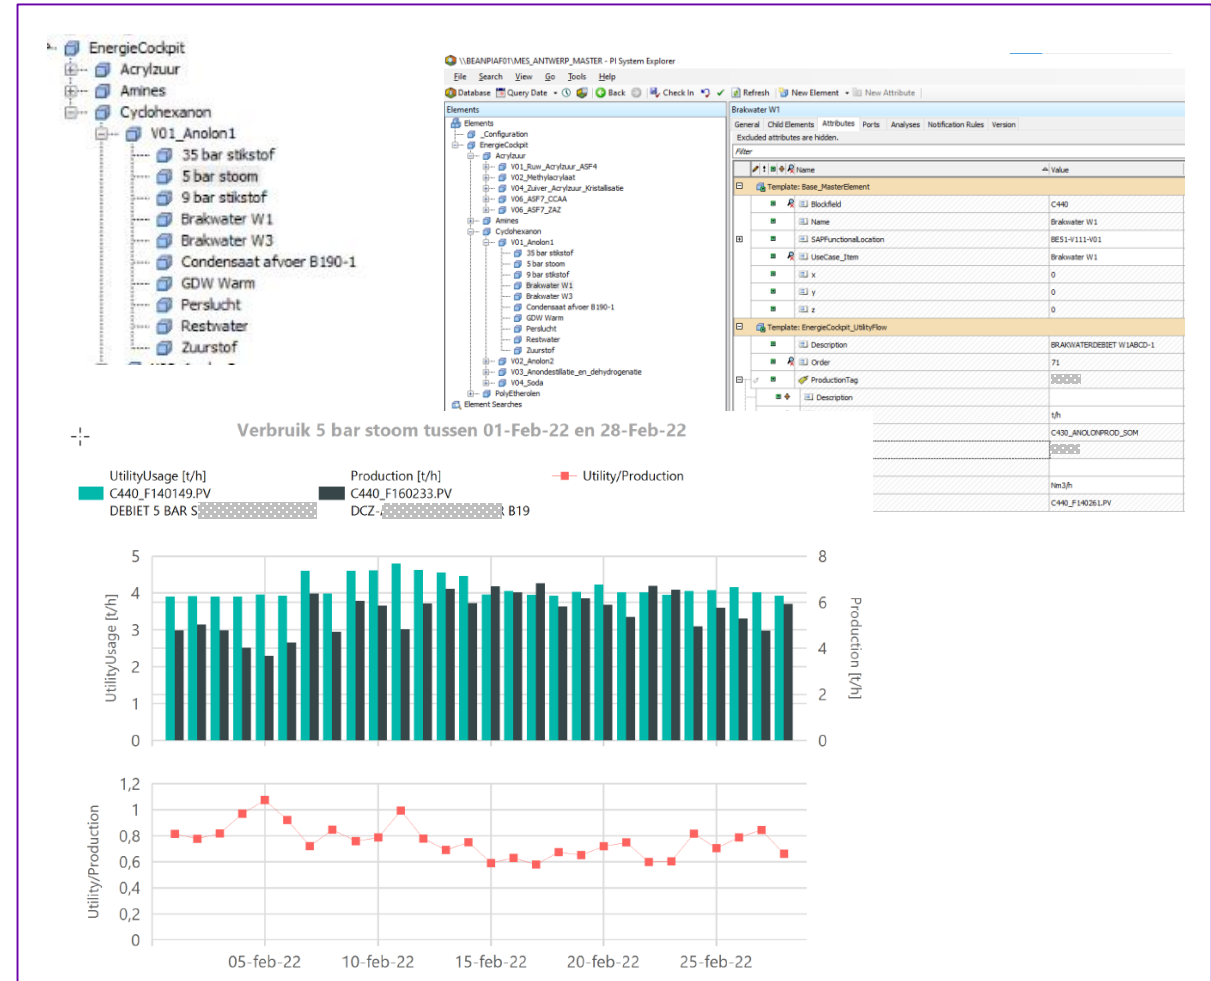

- ❖ Define in PI AF per Installation the utilities
- ❖ Make the correct calculation for each utility per installation
- ❖ Generate a report where the correlation between usage of utilities vs production is visible

## Benefits

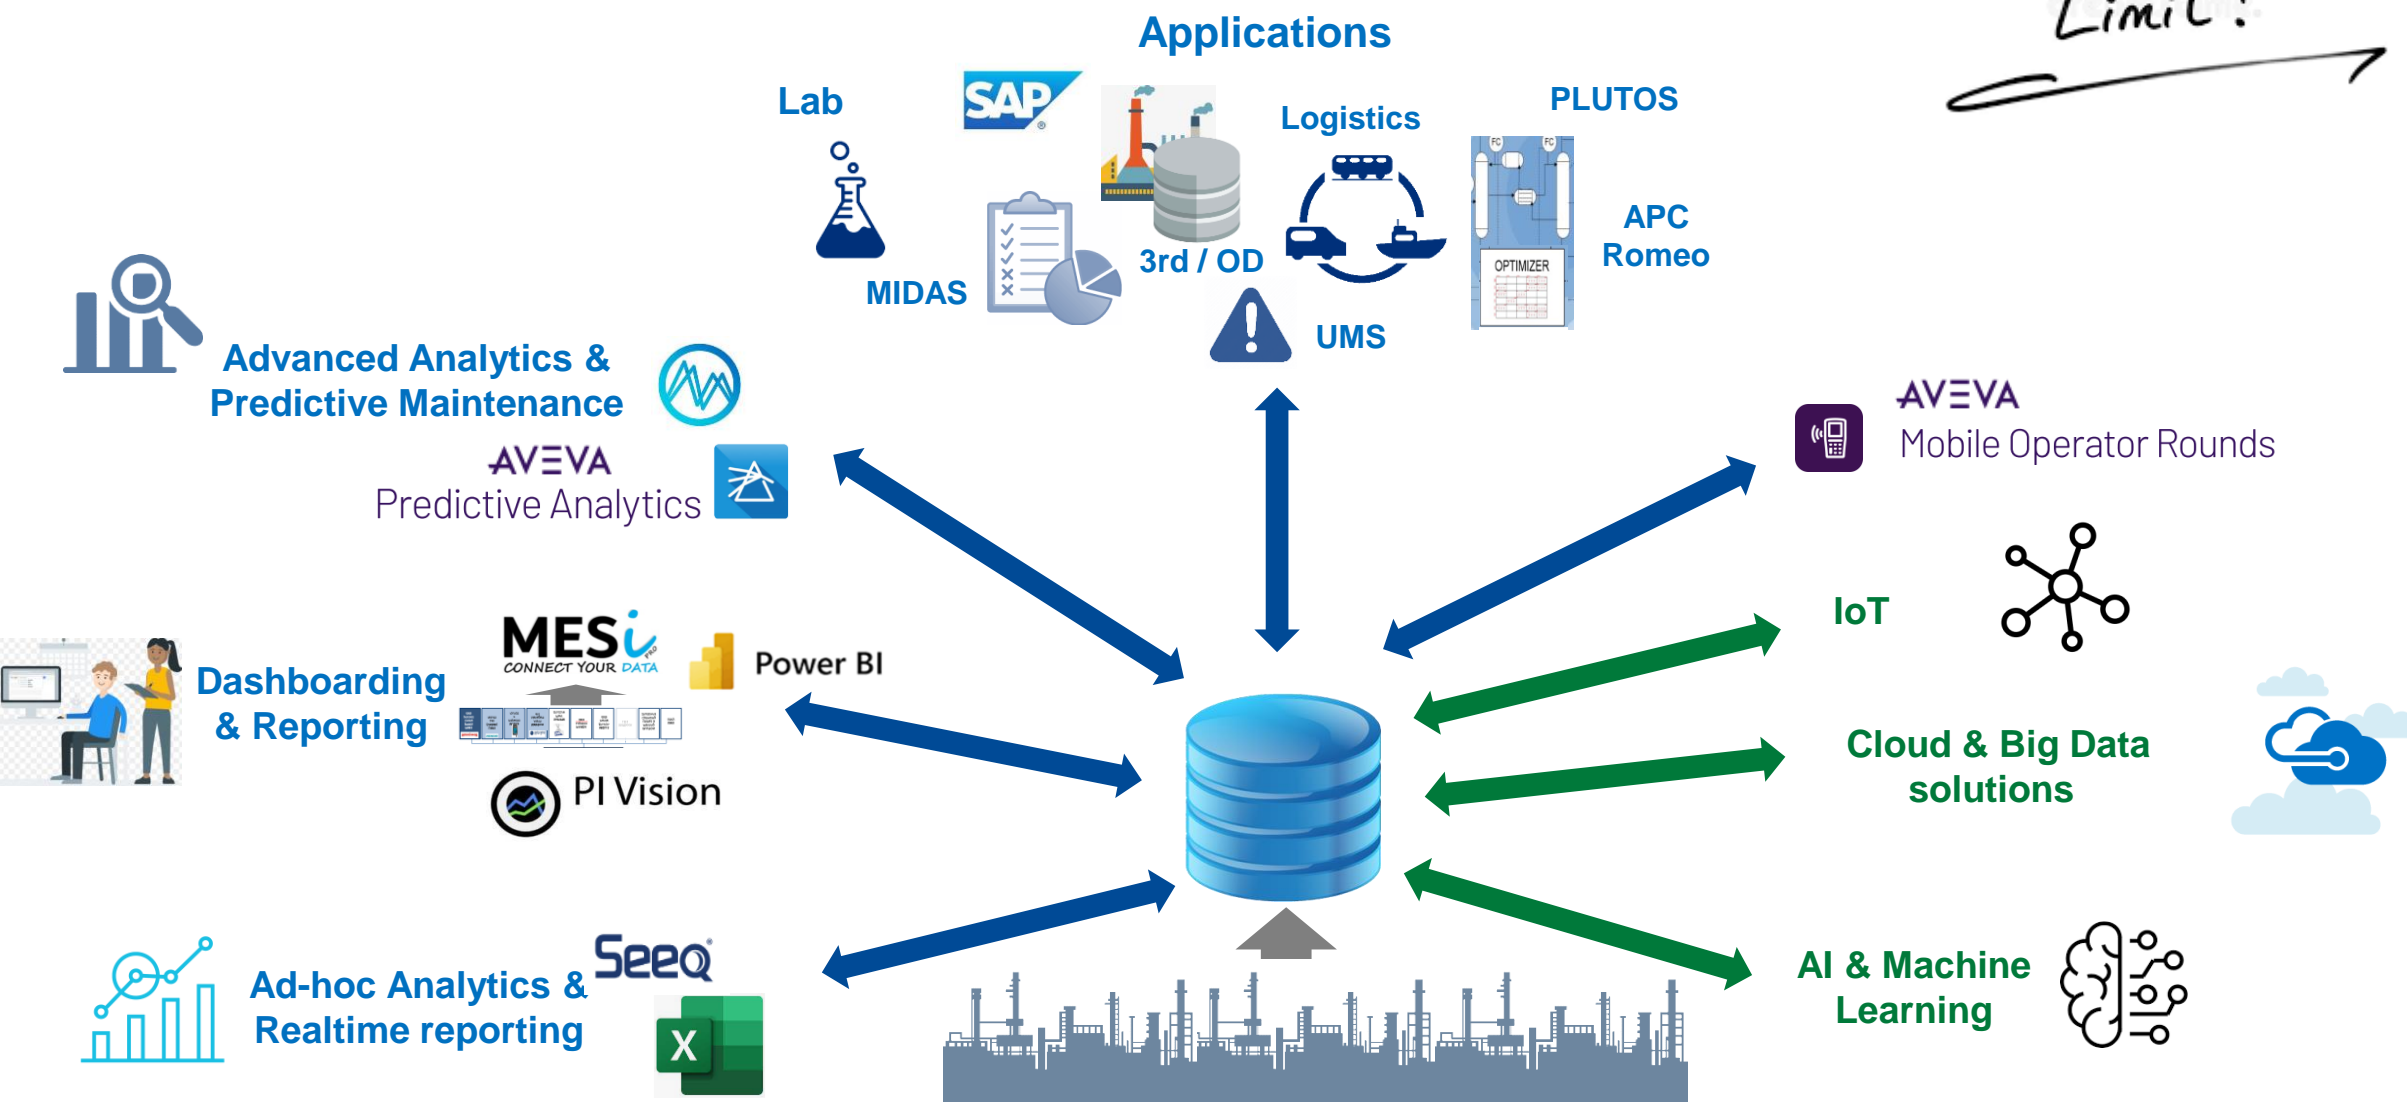

- ❖ More awareness of utility usage during production, report is discussed on a monthly base
- ❖ Possibility to detect inefficient usage of utilities and can lead to process optimisation => Saving costs

#### ABOUT AVEVA

AVEVA is a global leader in industrial software, driving digital transformation and sustainability. By connecting the power of information and artificial intelligence with human insight, AVEVA enables teams to use their data to unlock new value. We call this Performance Intelligence. AVEVA's comprehensive portfolio enables more than 20,000 industrial enterprises to engineer smarter, operate better and drive sustainable efficiency. AVEVA supports customers through a trusted ecosystem that includes 5,500 partners and 5,700 certified developers around the world. The company is headquartered in Cambridge, UK, with over 6,500 employees and 90 offices in over 40 countries.
