Panel: Connect to drive the circular economy

The future of connected communities and what it means for critical
infrastructure

Hosted by Max McKay, AVEVA

AVEVA

A photograph of a modern cable-stayed bridge at dusk. The bridge's concrete piers and cables are illuminated with warm yellow lights, which reflect on the water below. In the background, a city skyline is visible under a twilight sky with soft purple and blue hues. A dark semi-transparent rectangle is overlaid on the center of the image, containing white text.

We are exploring the future of connected communities and what that means for critical infrastructure. With connectivity being a focal point of conversations within the industry, we will dive into what “connectivity” truly means and the value that comes from technology adoptions throughout your infrastructure organization's digital journey.

Connected infrastructure

The power of the connected industrial economy

Gary Wong, Global Industry Principal of Infrastructure & Water, AVEVA

AVEVA

We are connected

Visibility and multi-org collaboration enabled through agnostic **connectivity, visualization, and sharing**

Addressing the challenges

- Data silos hampering coordinated response
- Supporting multiple entities and stakeholders
- Integrating disparate systems
- Optimizing workflows and efficiencies

Addressing business imperatives

- Agility and resiliency
- Operational efficiency
- Transformation of work
- Asset reliability and safety
- Sustainability and net zero

Savings with data-driven decisions at Pimpri-Chinchwad, India

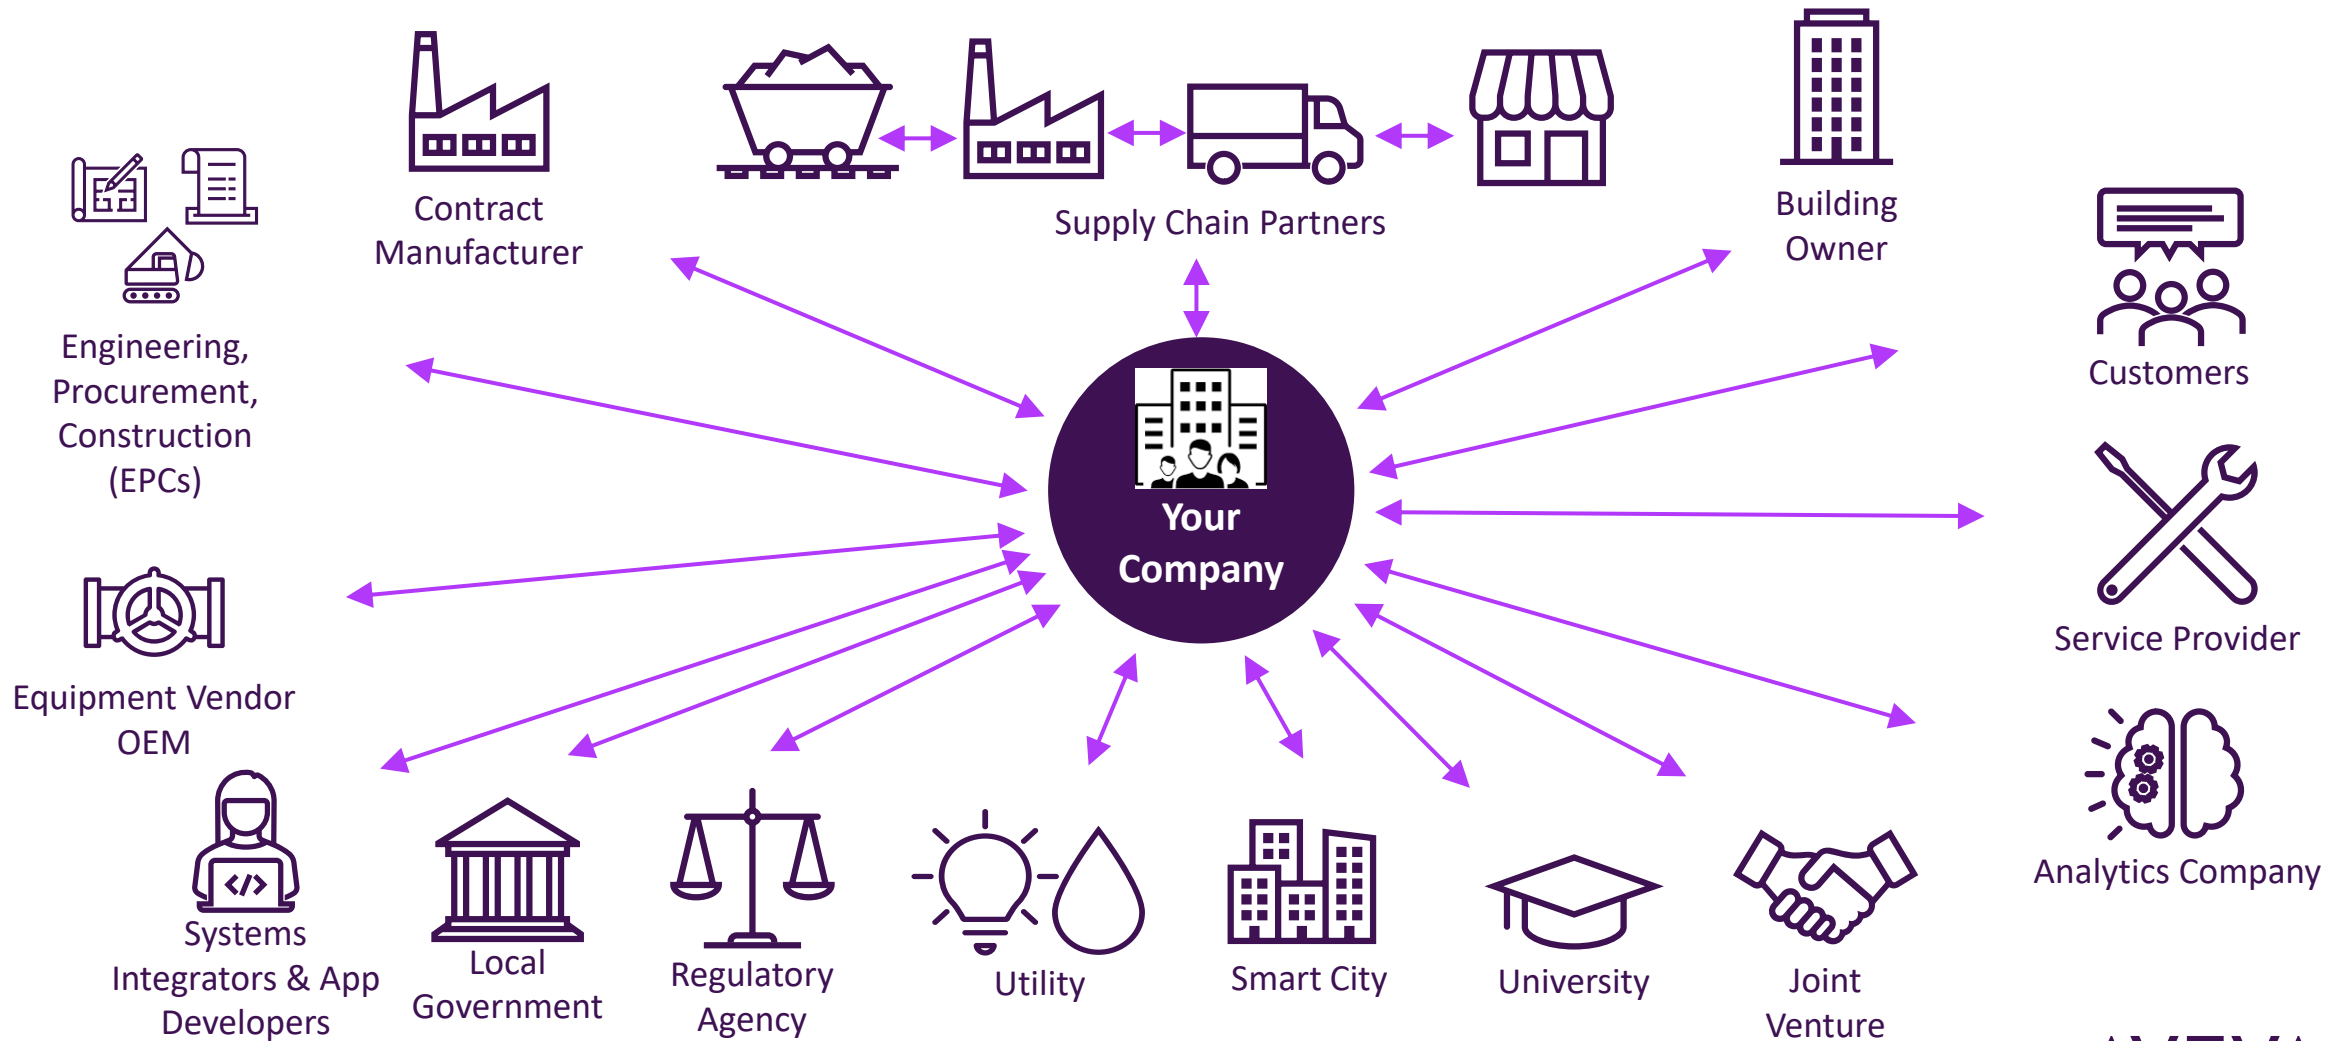

- 2 million people in Western India
- 4,600 individual municipal systems and applications – traffic to water

IMPACT

- Reduced energy use by >15%
- Cut water losses by 18%
- Cut traffic congestion by >20%

- *Full video:*
<https://www.youtube.com/watch?v=BNJSS4nDln4>

Many stakeholders connecting the value chain

WHA Thailand turns industrial properties into smart facilities

- Comprehensive deployment covers environmental and CCTV monitoring
 - Water and air quality
 - Rainfall
 - Water & wastewater production
 - CCTVs for infrastructure, road, utilities
 - Solar, and more
- Supporting predictive maintenance and energy optimization
- **IMPACT: Reduced 75 tons of CO2 GHG emissions / year**
- Full write up: <https://www.wha-group.com/en/sustainability/our-campaigns/governance-economic/1207/unified-operation-center-uoc>

AVEVA is helping transform the world's infrastructure

Enables energy-efficient travel for 8,000 daily commuters

On track to be carbon neutral by 2025 with estimated savings of \$197M over 60 years

COSATRON

Utilizes the cloud to deliver remote air quality monitoring services in real time

Increased efficiency and cost control, scalability and standardization

Increased customer satisfaction and reduced water shortages from 14% to 5%

Reduced energy consumption by 45% with savings of 80,000 euros per month

Centralized all infrastructure systems to enable seamless management in real time

Improved safety and saved more than \$1.4 million per year

HELEN SÄHKÖVERKKO
Improved data management saves time and money, making power distribution more efficient

Improved efficiency and saved \$3 million a year in one plant alone

Shanghai Laogang Project

Digital design of 9000 kWh waste-to-energy plant

Connects 260 global engineering teams driving 20% better collaboration

Real-time insight and management of critical infrastructure systems across the city

Reduced response times by up to 13 hours to protect ecologically sensitive environments

NORTHWEST STORM SYSTEM - PFD

NORTHWEST STORM SYSTEM – PI VISION

NORTHWEST STORM SYSTEM – ALERTS

EPCOR uses real-time data to drive situational awareness and improve resiliency

Challenge

- Increased risk of large rainfall events necessitated a new approach to prevent and reduce the impact of stormwater and urban flooding in the City of Edmonton
- Distinct and isolated systems prevented a real-time view of system performance
- Needed to create secure access to centralized data for user groups and business applications to access actionable information for monitoring, reporting and analysis

Solution

- Implemented AVEVA™ PI System™ to predict and manage the movement of stormwater through smart sensors and technologies that integrate into the collection system

Results

- **Unlocked data and made it accessible to users and applications**
- **Developed system allows people to discover process interdependencies, improving operational performance and cutting response times from days to minutes**
- **Enabled dynamic management of stormwater systems during flood events, ensuring public safety, avoiding environmental releases and saving thousands in regulatory fines**

O2 digitally generated report

GREAT LAKES PILOTAGE REGION DISTRICTS TRANSIT SUMMARY	
(C)-Cornwall (Saint-Lambert to Snell)	0
(1)-District 1 (Snell to Cape Vincent)	0
(LO)-Lake Ontario (Cape Vincent to Port Weller)	3
(2)-District 2 (Port Weller to Huron Cut Buoy 11&12)	11
(3)-District 3 (Navigable waters above Huron Cut Buoy 11&12)	0

2- Expanding with Context

Vessel data is enriched with voyage, geofencing, traffic, compliance, weather, and user inputs

Voyage (IMOS)

Traffic

Geofencing (ESRI)

Weather

Compliance

3- Advisory and Analytics

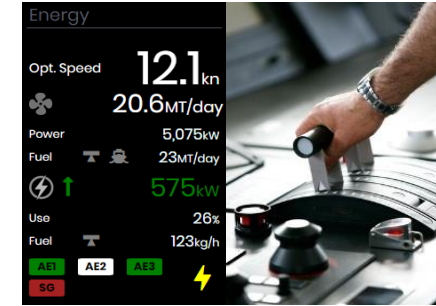

Produces decisional Advisory Dashboards and Analytics Reports using algorithms and third-party plugins. Helps crew and office make better-informed decisions.

Energy Management with custom AVEVA™ PI Vision™ widgets

Speed Optimization Trial Results

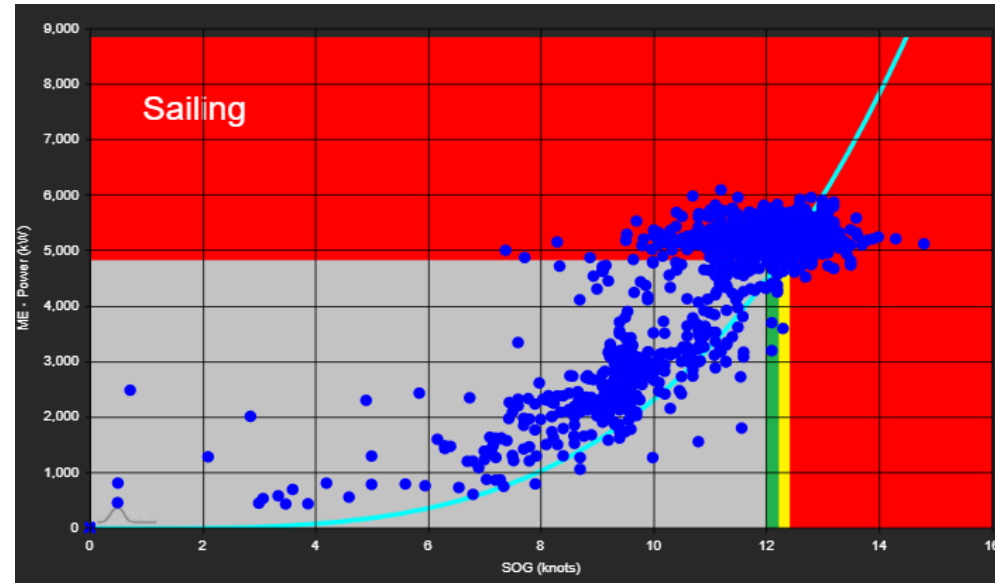

In 2022, 8 Canadian vessels trialed and sailed **219 days** in open water
299 MT of fuel was saved, equivalent to **956 MT** of CO₂ reduction
No negative side impact on the business due to fuel savings

Speed Optimization

No Speed Optimization

MARINE | CANADA & WORLDWIDE

CSL reduces fuel consumption by ~3-5% per trial vessel per year and achieves asset failure avoidance goals

Challenge

- Improving operations has always been a primary drive of CSLers, and remains a key business priority
- Regulations not always easy to follow (there are no street signs on waterways)
- Lots of manual entries and paperwork
- Distributed fleet worldwide

Solution

- Deployed AVEVA™ PI System™ to streamline data collection, access, analysis, and reporting

Results

- **Estimated 3-5% fuel saved per vessel per year – validated with trial on 8 vessels**
- **Estimated ~120 MT CO₂ saved per vessel per year – validated with trial on 8 vessels**
- **Potential failure avoidance by applying ~80+ preventive repairs thus far**

Schneider Electric

The Impact of Water

Average water use in the U.S. is **~82 gal per person per day**, which means that **~10M gal** is equivalent to the **daily consumption of 1 small city** (pop. 122k)

2% of the U.S. energy usage is being accounted to the water industry = **45 million tons of GHG per year**

Global water use has increased **6x** over the past 100 years and continues to grow steadily at a rate of **about 1% per year**.

Global warming is accelerating the access to water issue. **By 2030**, we will only have **60%** of the water supply we need.

Challenges of **water resource conservation** (water basin, desalination, water leakage); **sustainability commitments** (energy efficiency, carbon footprint); aging workforce; aging infrastructure; increasing regulations; extreme weather events; **lack of data strategy**

Energies & Chemicals

3x - 5x barrels of water needed for every barrel of oil.

6.6T gal of water is needed for green hydrogen production by 2050.

Semiconductors

8.5 gal of water is needed to make a single chip for a laptop or smartphone.

3.1M gal of ultra-pure water is needed per day to extensively clean the silicon wafers.

≈Tens of millions gal per day at one plant

Mining, Minerals & Metals

Water is ~15% of total mining spend.

132B gal of water is required for copper production in Chile.

Consumer Packaged Goods

6,600 gal of water is needed to grow and produce a day's supply of food for a family of four.

160B gal/year of water is used by five global F&B manufacturers

The Digital Transformation Journey

It all starts with the right strategy, partners... and data.

Digitally Evolved

Digital Transformation

Enterprise management

Integrated system-of-systems

- Business integration and optimization
- Closed-loop process optimization
- End-to-end visibility
- Cybersecure hybrid networks (cloud)
- Digital twin
- IT/OT Convergence

Advanced management

Connected systems

- Real-time, aggregated data contextualization
- Advanced automated control
- Asset & Predictive maintenance
- Energy management
- Empowered workforce, increased bandwidth
- IT/OT Collaboration

Digitalization

Siloed management

Basic connectivity

- Smart, IoT devices
- Cybersecure, reliable network
- Basic automation & control
- Use of software tools & data

41% of water utilities are collecting data but not leveraging effectively
32% of water utilities are collecting some data

Life Is On

Schneider Electric

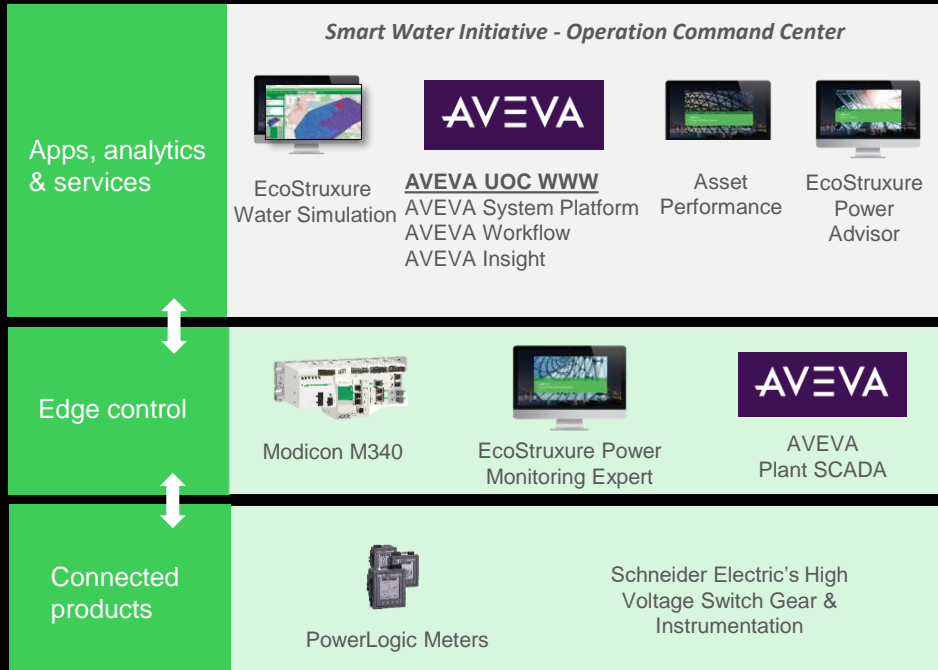

Largest supplier of raw water (250 miles of pipeline) in the Eastern region of Thailand to industrial estates, municipalities & households <https://www.eastwater.com/en/MediaCenter/CorporateNewsDetails/27>

“Smart water initiative” – **AVEVA’s Unified Operation Center** with **Schneider Electric’s EcoStruxure Solutions** established EastWater as Thailand’s most advanced, efficient & ‘smart’ water supplier.

Project reduced water loss by **17%**, reduced energy cost up to **3%**, & increased overall operation efficiency up to **30%**.

for Water & Wastewater
Water Resources & Networks

SCADA Operation Command Center

Moreover, East Water is able to reduce energy consumption by 2-3 percent a year.

ABOUT AVEVA

AVEVA is a world leader in industrial software, providing engineering and operational solutions across multiple industries, including oil and gas, chemical, pharmaceutical, power and utilities, marine, renewables, and food and beverage. Our agnostic and open architecture helps organizations design, build, operate, maintain and optimize the complete lifecycle of complex industrial assets, from production plants and offshore platforms to manufactured consumer goods.

Over 20,000 enterprises in over 100 countries rely on AVEVA to help them deliver life's essentials: safe and reliable energy, food, medicines, infrastructure and more. By connecting people with trusted information and AI-enriched insights, AVEVA enables teams to engineer efficiently and optimize operations, driving growth and sustainability.

Named as one of the world's most innovative companies, AVEVA supports customers with open solutions and the expertise of more than 6,400 employees, 5,000 partners and 5,700 certified developers. The company is headquartered in Cambridge, UK.
