Supercharging the Operational Digital Twin

Zev Arnold

Accenture Industry X - Principal Director

AVEVA

**Zev Arnold**  
Principal Director  
zev.arnold@accenture.com

Zev Arnold is a technology practitioner in Accenture Industry X with a focus in digital manufacturing and operations. In his career, he has helped manufacturing clients make improvements in performance and reliability, and helped secure their license to operate.

He has specialized in IT/OT data infrastructure and analytics, working with integrated operations and digital engineering initiatives across Industry 4.0 enterprises, including utilities, oil & gas, life sciences, mining, and consumer goods. His responsibilities have included digital program delivery, IIoT strategy, and value realization.

He has provided thought leadership on the use of OT data to drive business value and change through industry conference presentations, communities of practice, and project engagements. Within Accenture, Zev is the global lead for the AVEVA Operations Information Management capability.

## Gartner: Operational Technology (OT)

Operational technology (OT) is hardware and software that detects or causes a change, through the direct monitoring and/or control of industrial equipment, assets, processes and events.

<b>Improved Reliability</b>		<b>Safe Operations</b>	
<b>Increased Process Performance</b>		<b>Sustainable and Compliant</b>	

### Machine Intelligence Leaders achieve:

**10-15%** efficiency improvement

**8-14%** cost reduction

**10%** reduction in environment impact

# ACCENTURE & AVEVA strategic alliance

Accenture and AVEVA have collaborated as strategic alliance partner for over 10 years, working together across multiple industries and jointly investing to develop and deliver industry leading solution across the asset and operations lifecycle from engineering through to operations and control.

**600+**

**AVEVA Practitioners**

across the globe

**2 \$M investment annually**

to grow the AVEVA Industry X Practice

**250+ AVEVA projects**

successfully delivered

**Dedicated**

Capability Leads for each key offering and region

**Multiple cloud platforms supported,**

including Azure and AWS

**Dedicated Centre of Excellence, Assets & Accelerators**

spanning AVEVA key product suites

## Key Alliance Campaigns:

- ❖ Integrated Project Execution
- ❖ Project Control Tower
- ❖ Manufacturing Excellence
- ❖ Data Intelligence Platform
- ❖ Intelligent Asset Management

\* No. of AVEVA skills per country

## Callisto, E80, Oasys, Eclipse, T.A.Cook, Anser & Flutura Acquisitions

to accelerate our industry penetration in food and beverages, chemicals, utilities, mining and other process and discrete based manufacturing industries

# IT/OT/ET

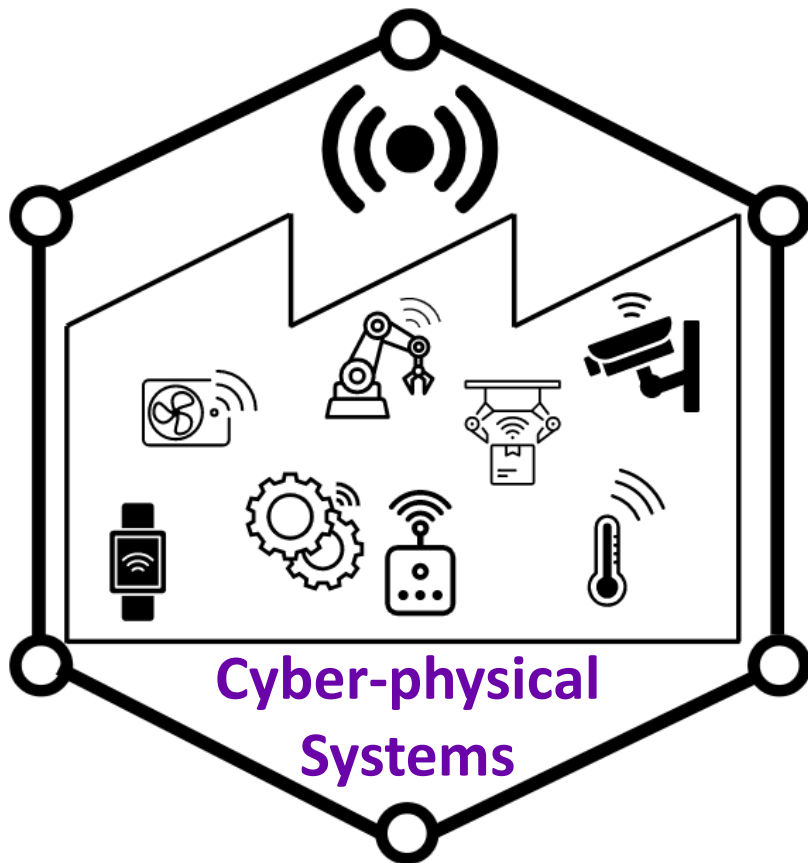

# Twin of Twins

# Industry 4.0

## The Internet Of Things

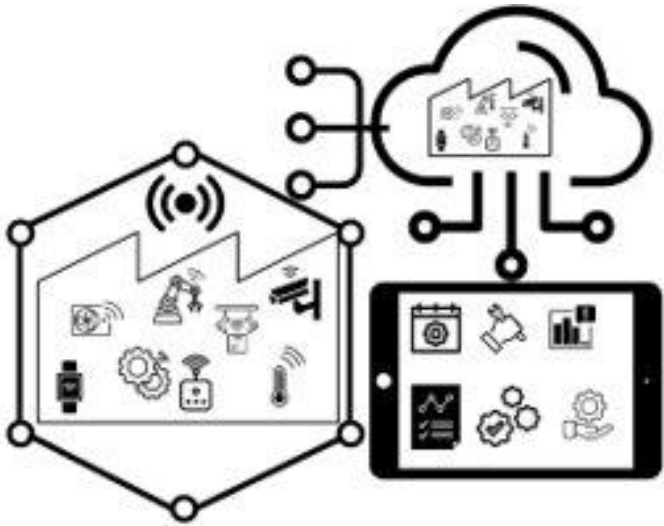

## Smart Factory (Digital Twin)

## The Internet Of Services

# Operational Digital Twin

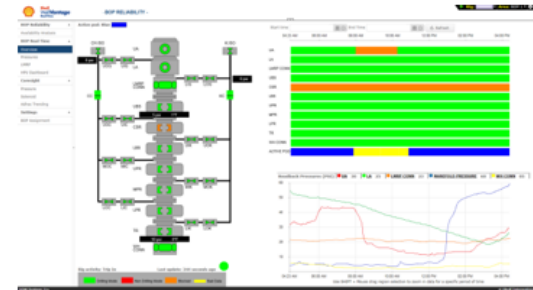

...coordinates **cyber-physical systems**, over the **Internet of Things**, to enable an **Internet of Services** that **assists** people and machines in the **execution** of their tasks.

# Case Study : Digital Twin vs “Just another plant app”

## Digital BOP

### COMPANY and GOAL

provides well delivery support and wanted to improve the **reliability of blowout preventers** in their drilling contractor fleet.

### CHALLENGE

Manual data reporting provided an incomplete understanding of BOP health and usage.

- Pressures and Temperatures available only via daily readings.
- Usage information limited to best-guess based on time.
- Failures not detected until they exhibited functional symptoms.

### SOLUTION

Using the PI System as a data engineering toolkit, Shell implemented a BOP monitoring application.

- Three custom dashboards
- PI Coresight™ screens for ad-hoc trending
- Significant data processing to derive information from data

### RESULTS

First instance of onshore detection of a control fluid leak in the industry.

- Onshore monitoring of regulatory testing
- Collection of previously unavailable usage information
- Organizational awareness of BOP health

SAN FRANCISCO 2022

## Barriers to Digital Twin Adoption

The diagram illustrates three barriers to digital twin adoption:

- Use Case Identification:** Represented by three overlapping circles labeled Outcome, Action, and Insight.
- Data Mega Silos:** Represented by a 3D cube with icons for IT, OT, and data silos.
- Data Culture:** Represented by an icon of a person running towards a data visualization.

# Navigation vs. Solution Hierarchy

## The Two Use Cases for OT Conceptual Modeling

Use Case Identification

Data Mega Silos

Data Culture

### Navigation Use Case

- Top Down Approach
- Solve for Browsability
- Improvement on Tag naming Convention
- “Most users can find Most data Most of the time”

### Solution Use Case

- Addresses a Specific Use Case
- “Fit-for-purpose”
- Foundation for expansion & scale
- Enables Analytics & data transparency

# Breaching the OT Mega Silo

## PI Asset Framework – Delivering OT Conceptual Models at Scale

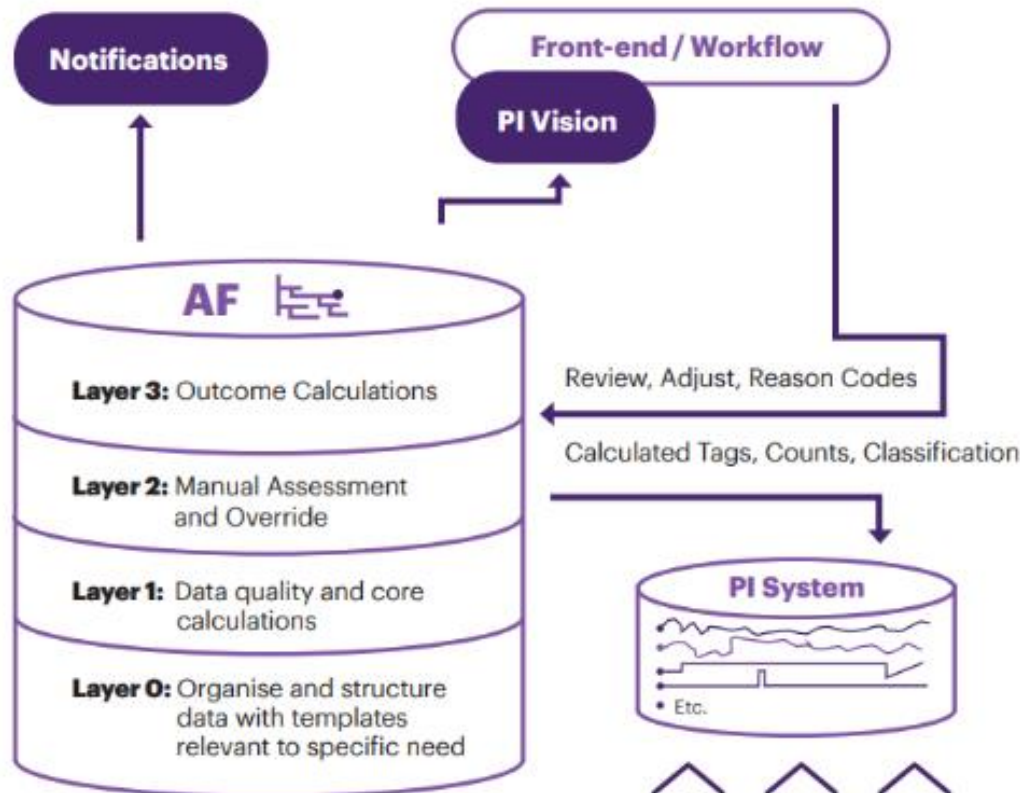

Use Case  
Identification

Data Mega Silos

Data Culture

## KEY BENEFITS

- ✓ **Functionality encapsulated in layers**
- ✓ **Easy to expand**
- ✓ **Traceable data in steps**
- ✓ **Data into insights via layers of calculations**
- ✓ **Manual overrides built into layers for flexibility**

# Self-service Solution Development

Let your users find their own use cases

## *FY24 PI System/ OT Data Experiments*

### AIOps for IIoT

#### Key Takeaways:

- Built on top of AVEVA DataHub
- Use Case: Monitor PI System and identify data real-time
- Microsoft Teams integrated AI Chatbot

### Next-gen Notifications

#### Key Takeaways:

- Extend the AIOps for IIoT framework for a general use case
- Relevant to all PI users
- Microsoft Teams Chatbot becomes the preferred PI interface

### Generated Hierarchies

#### Key Takeaways:

- Use AI to map tagnames to equipment definitions
- AI to map engineering diagrams to hierarchies

### Generated Data

#### Key Takeaways:

- Use AI to outperform previously difficult to simulate OT data
- Automate KPI creation
