GLOBAL  WEBINAR

# Digital Twins: Myths vs. Reality

Wednesday, September 11, 2019

# Speakers

**Will Hastings**  
PLM Analyst at ARC Advisor

**Enrique Herrera**  
Industry Principal at OSIssoft

# Defining the Modern Digital Twin

# Agenda

---

- What is a Digital Twin?
- Why are we discussing Digital Twins now?
- How are Digital Twins being utilized?

# What is a Digital Twin?

# What is a Digital Twin?

“...a cross-domain digital model that accurately represents a product, production process or performance of a product or production system in operation.”

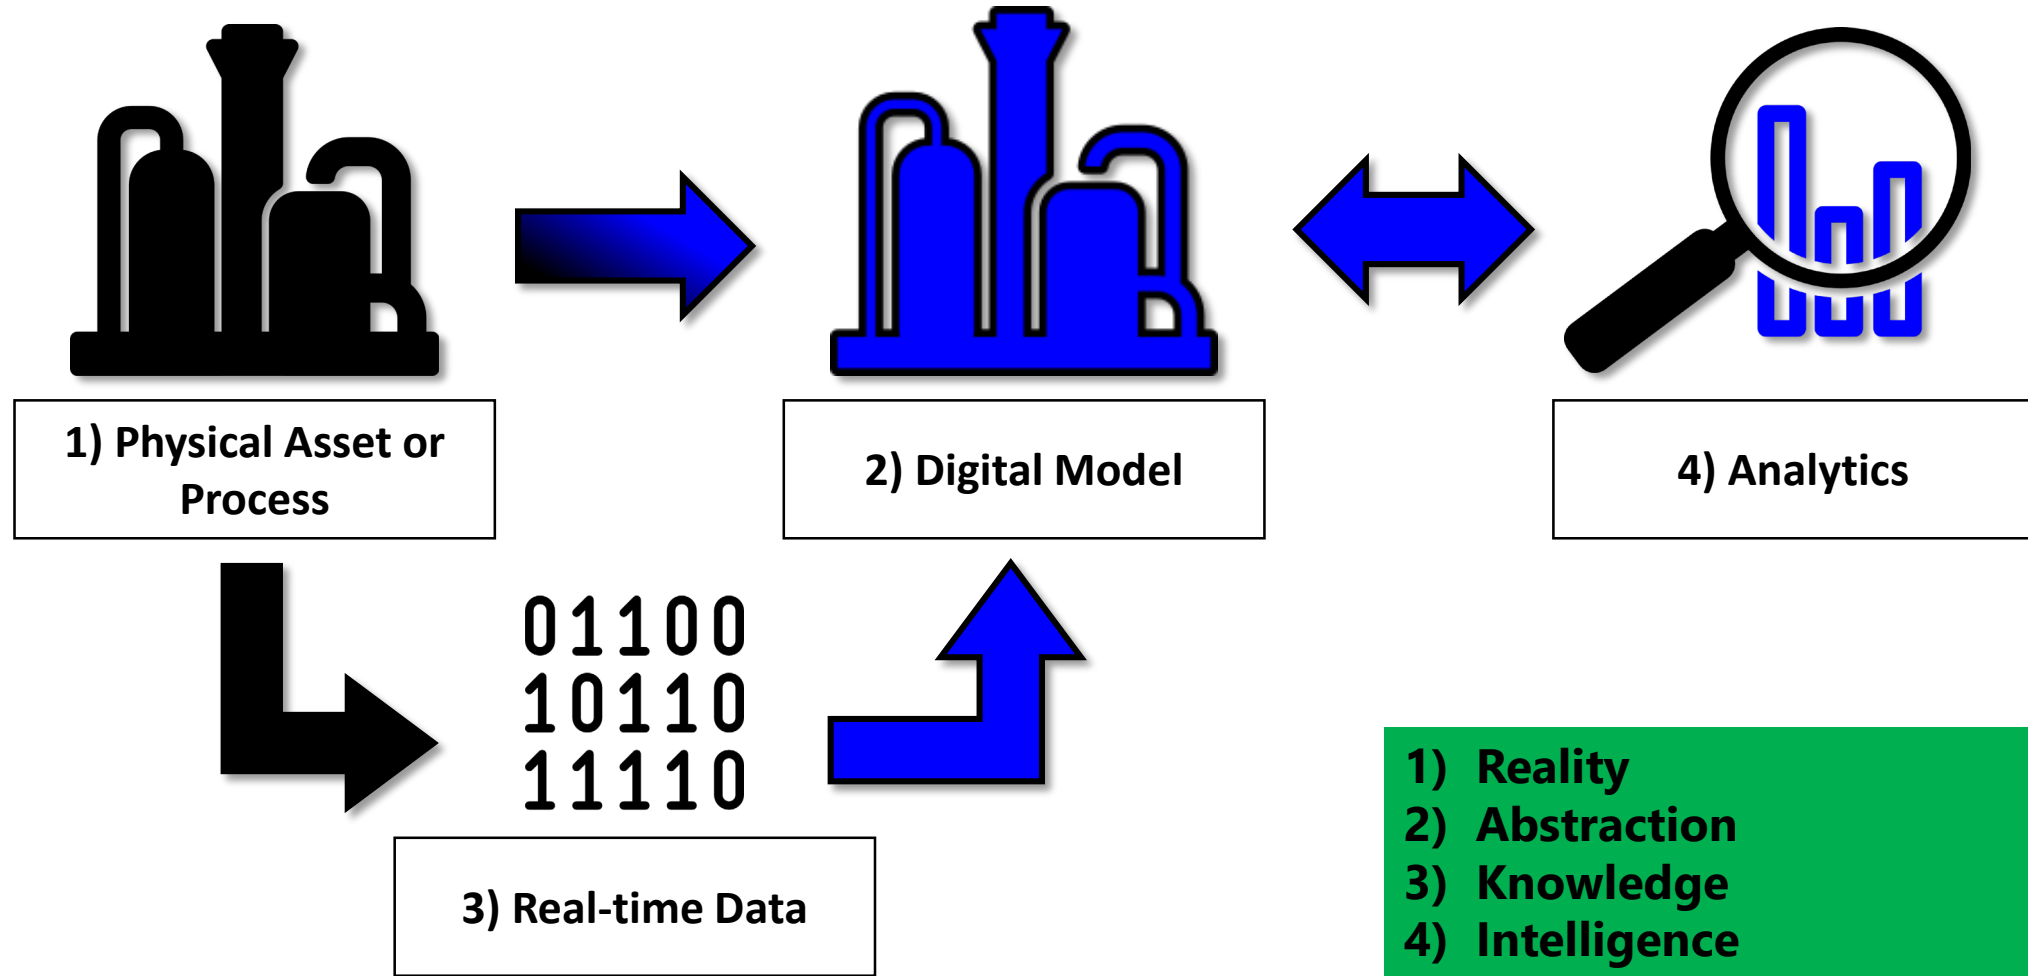

“...a near-real-time digital image of a physical object or process that helps optimize business performance.”

“...a representation of a physical asset that has a level of completeness and accuracy and includes context information that allows the user to understand its behavior and performance.”

“In short, the digital twin concept combines the ideas of modeling and the Internet of Things (IoT).”

“Digital twins are virtual replicas of physical devices that data scientists and IT pros can use to run simulations before actual devices are built and deployed.”

# Digital Twin: A Sum of Constituent Parts

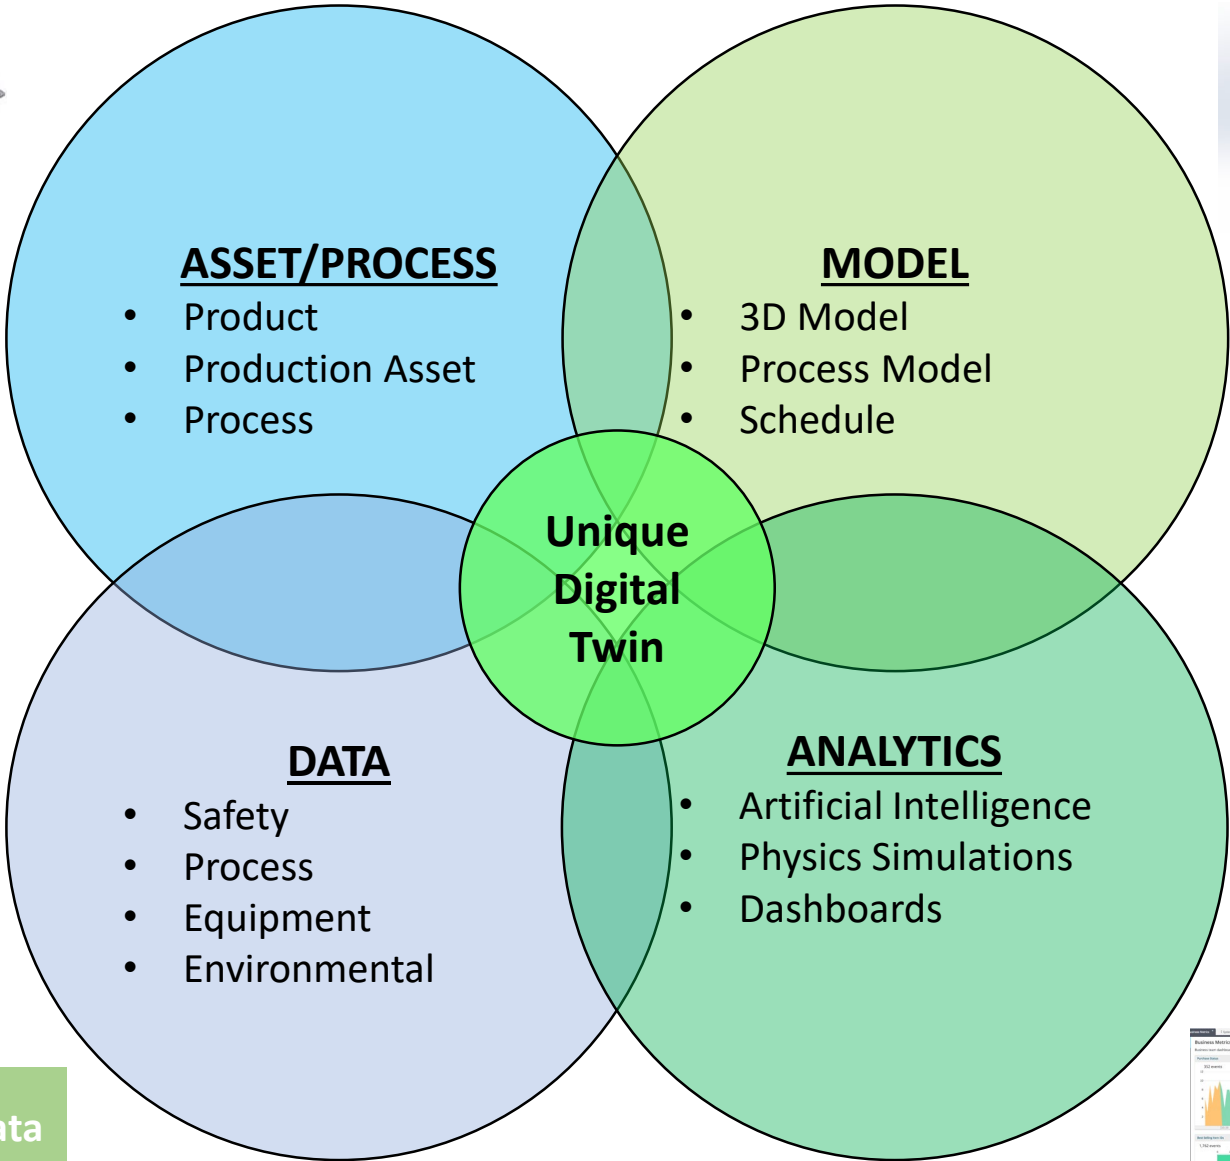

# Digital Twin Variations

Machine Health

Environmental Data

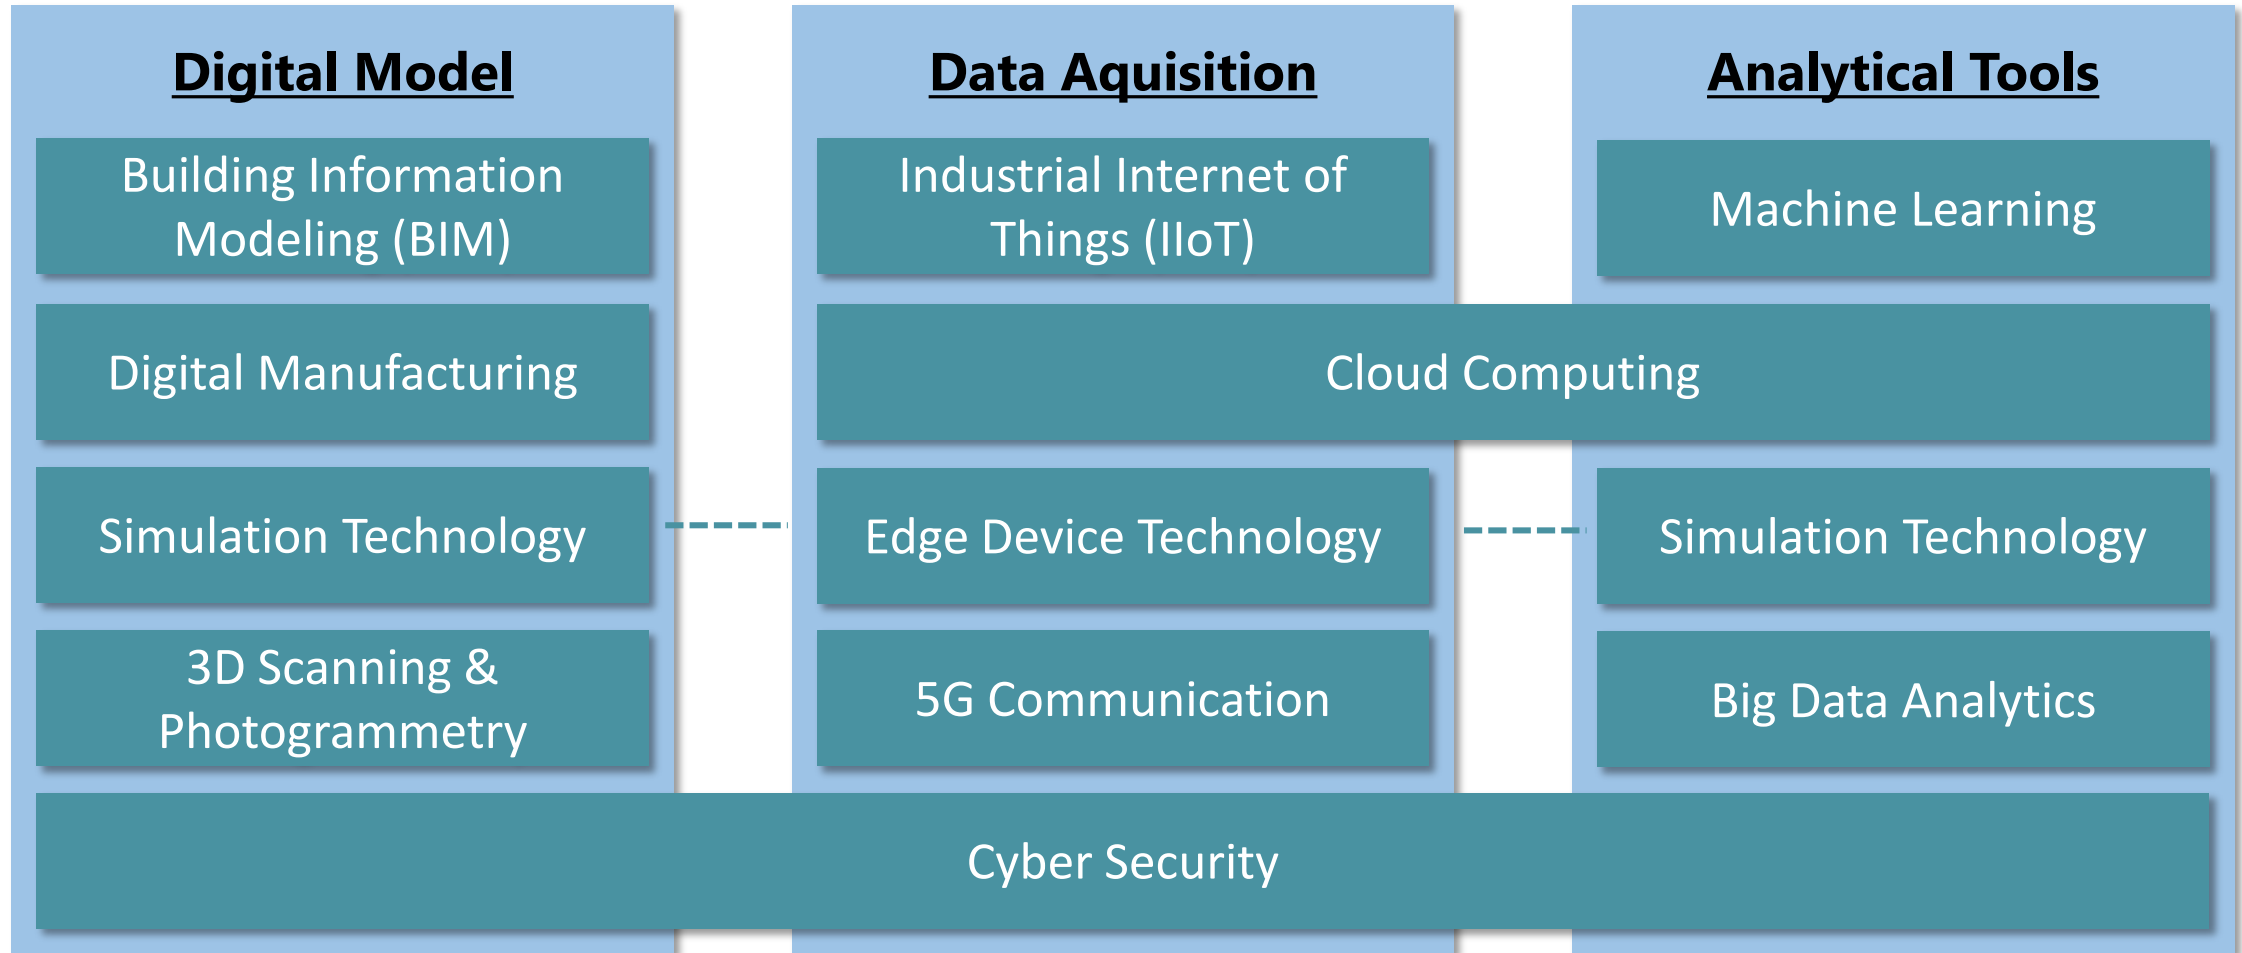

Process Data

# Why Are We Discussing Digital Twins Now?

# Emerging Generation of Digital Twin Enabling Technologies

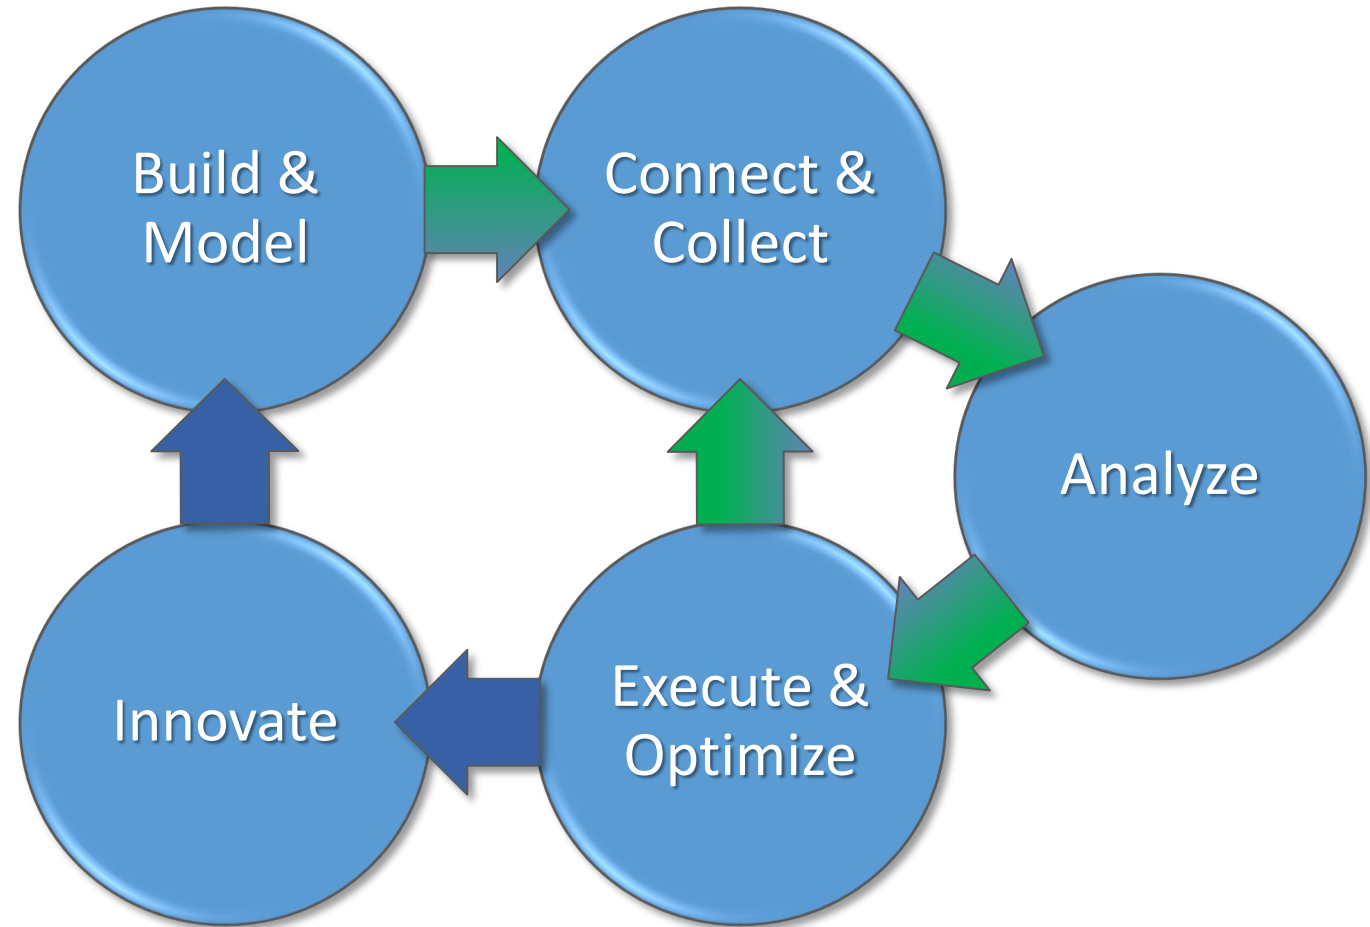

# Enabling an Information Value Cycle

## Project Digital Twin

- Accelerate Program Timing
- Increase Product Fitness
- Provide Performance Baseline
- Close the Engineering Loop

## Performance Digital Twin

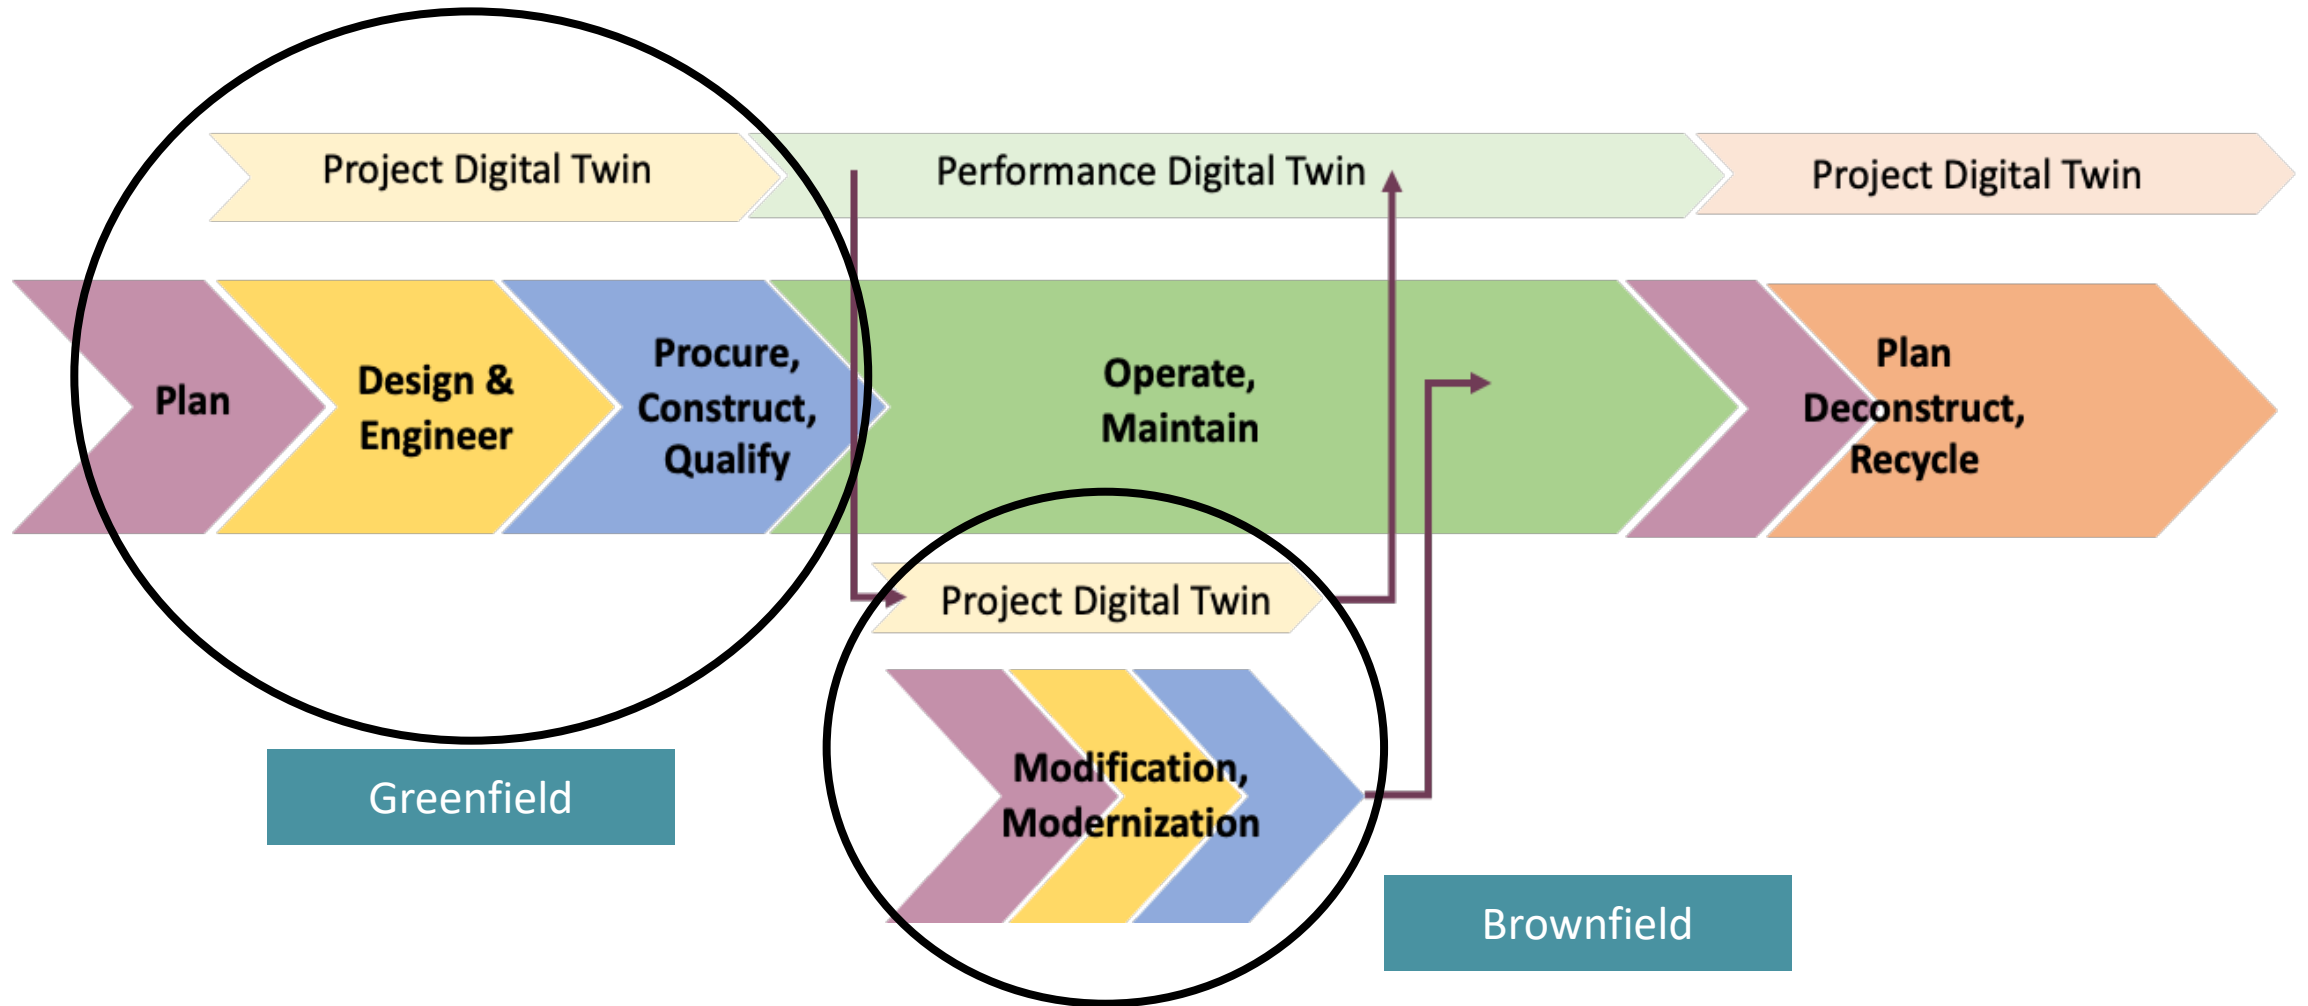

- Optimize Operating Performance
- Create & Optimize Services
- Drive Project Decisions

# How Are Digital Twins Being Implemented?

# Project vs. Performance Digital Twin

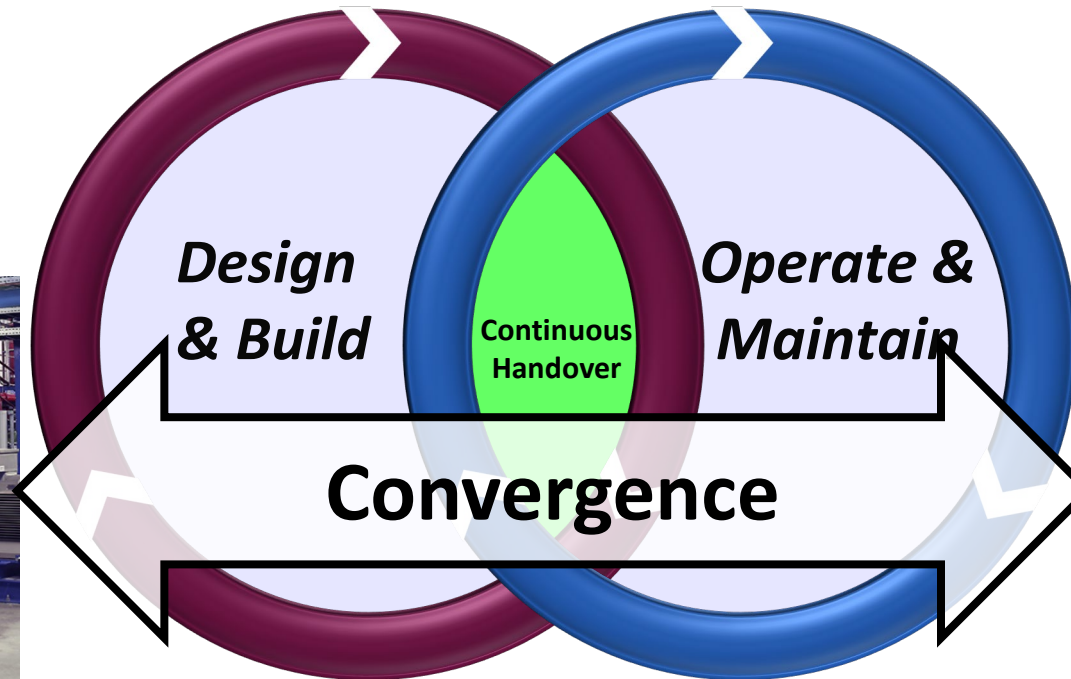

# Digital Twins Throughout Asset Lifecycle

Modeling & Simulation  
Construction Sequence  
Virtual Commissioning

- As-Designed
- As-Built
- As-Maintained

- Increase throughput
- Improve product quality/yield
- Simulate what-if scenarios for new processes/parameters
- Model demand-supply requirements
- Minimize energy costs

Predictive Maintenance  
Process Optimization  
Energy Management

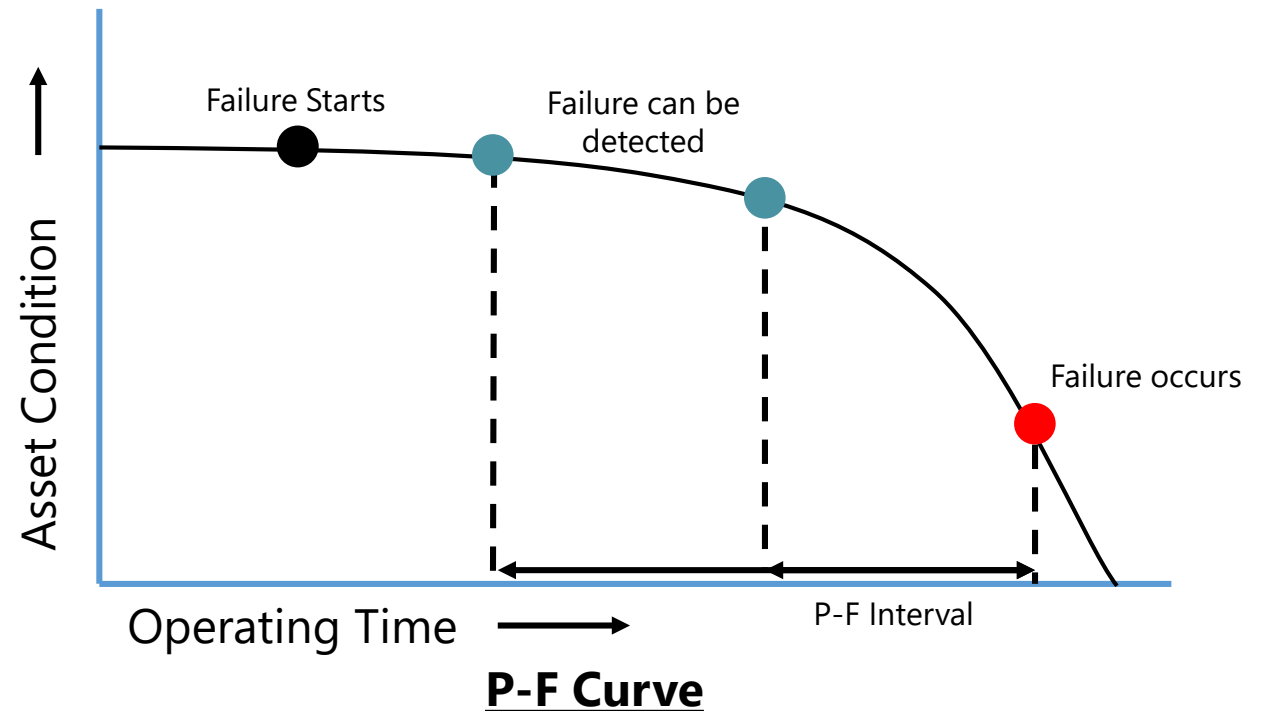

- Real-time IoT data
- Analytics
- Alerts

# Digital Twin for Maintenance

Strategy	Description
<b>Prescriptive</b>	Model and knowledgebase* identifies an issue and what to do for repair.
<b>Predictive (PdM)</b>	Equipment specific algorithms* or machine learning*. Multi-variate.
<b>Condition Based (CBM)</b>	Alerts for bad trends or other rules-based logic using a single data value.
<b>Preventive</b>	Service in a fixed time or cycle interval
<b>Reactive</b>	Run to failure, and then repair

**Mature Digital Twin**

- First Time Fix Rate
- Mean Time to Repair
- Mean Time Between Failures
- Reduced Losses
- Optimized Equipment Lifecycles and Spare Parts Usage

**Asset Management Maturity Model**

# Considerations For Your Digital Twin Initiative

## Economy of Data

- Volume
- Fidelity
- Application

## Collaboration

- Build
- Maintain
- Utilize

## Data Governance

- Integrity
- Availability
- Security

## Scalability

- More Data
- More Analytics
- More Uses

## Thank You.

# Operational Digital Twins in Action

*Enrique Herrera - Industry Principal, Manufacturing*

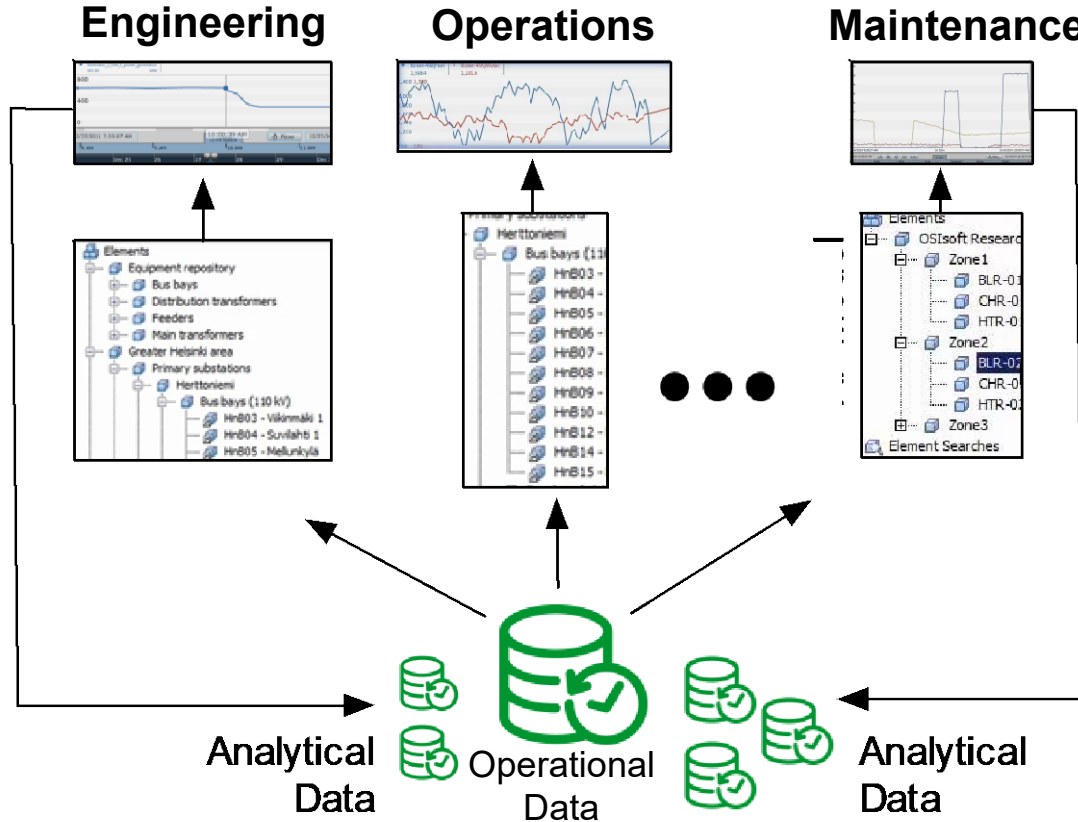

*September 11, 2019*

# Operational Digital Twins in Action

- Organize operational for multiple users
- Visualize modeled results with actual measurements
- Train employees with actual operational data
- Optimize after service with advanced analytics

# Organize Data for Specific audience and goals

- Create asset-centric models:
- Target audiences and goals
- Implement models in operational analytics
- Re-use models across multiple sites

Source: <https://www.osisoft.com/pi-system/pi-capabilities/pi-server/>

# OSIsoft Asset Framework

## Analyses

- Efficiency analysis
- Key Performance Indicators (KPI)

## Events

- Downtime
- Startup
- Failure

## Notifications

- High speed
- Rotor failure
- Low pressure

## Time-series

- In-Flow
- Pressure
- Vibration data

## Asset details

- Name
- Model
- Manufacturer

## External data

- Performance curves
- Last maintenance date
- Design documents
- Best operating procedures

# Organize and Synthesize Operations Data before Analyzing

Enterprise Operations Infrastructure

# Visualize Actual with Desired / Predicted

## Cooler D/C Heat Exchanger Temperature Forecasting-5mins

# Best Practices in the Integration of Modeling Software with the PI System

Seth Tate - IT Business Analyst

&

Joe Rose - SW Regional Manager

# About Phillips 66

## Midstream

- Moves crude oil, refined products, natural gas and NGL
- Gathering and processing, pipelines, fractionation, storage, and export facilities
- General partner of Phillips 66 Partners LP
- 50% interest in NGL and natural gas processor, DCP Midstream, LLC

## Chemicals

- 50% interest in Chevron Phillips Chemical Company LLC
- Manufactures olefins, polyolefins, aromatics, alpha olefins, styrenics and specialty chemicals globally
- Advantaged ethane feedstock

## Refining

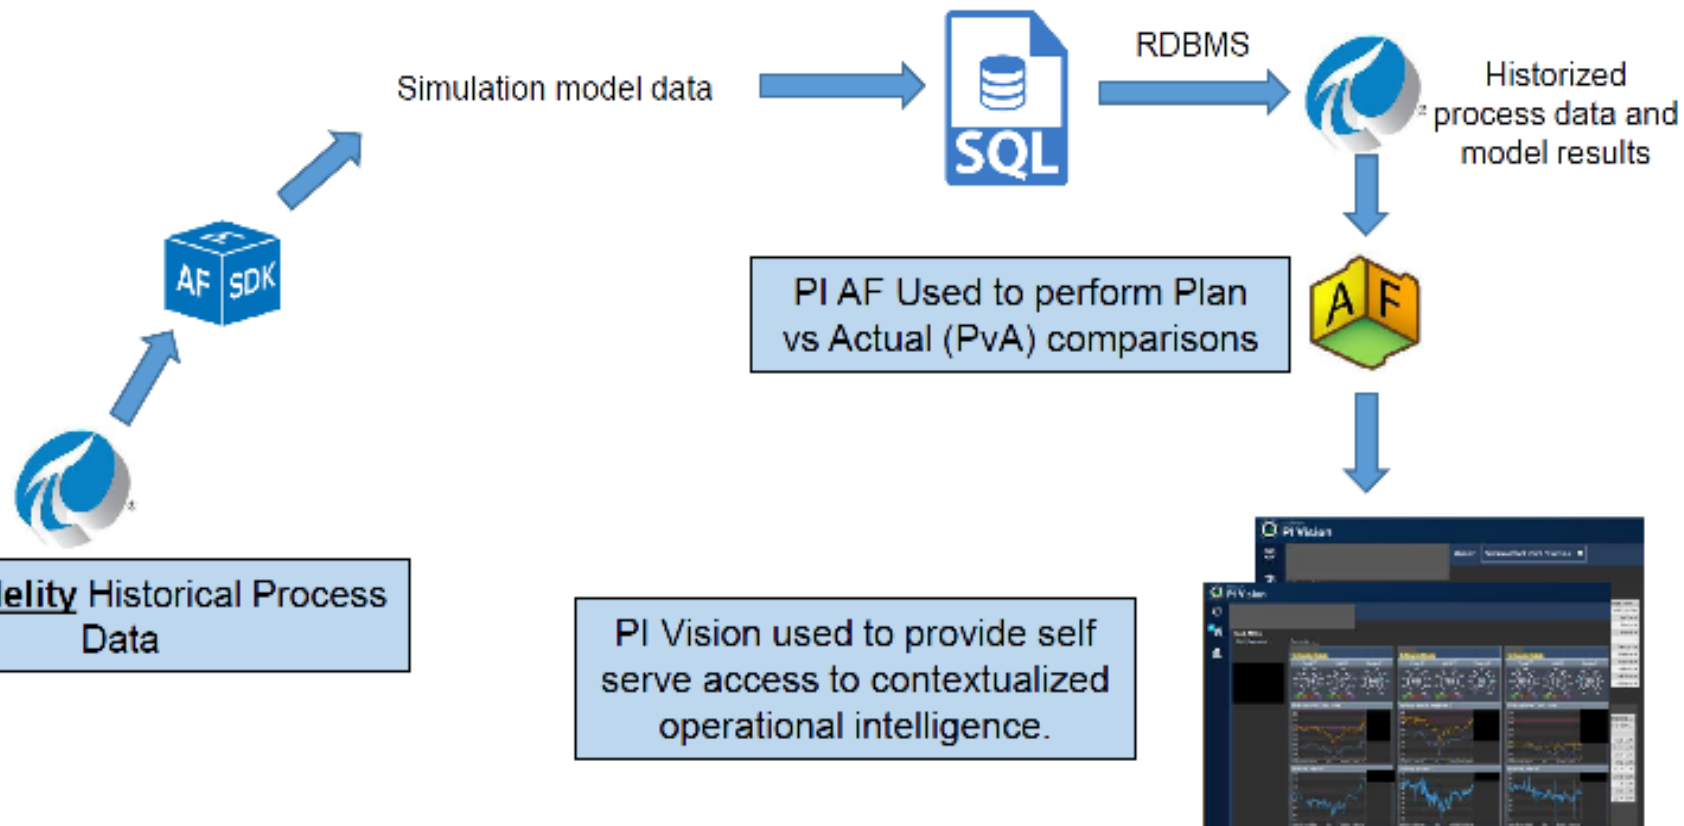

- Refines crude oil and other feedstocks at 13 refineries in the U.S. and Europe into products (mainly gasoline, diesel and aviation fuel)
- 2.1 MMBD in global refining capacity
- Large, complex refineries with integrated supply and distribution networks

## Marketing & Specialties

- Markets refined petroleum products (gasolines, distillates and aviation fuels) mainly in the U.S. and Europe
- 7,550 U.S. branded sites
- 1,630 European retail sites
- Finished lubricants and Excel Paralubes base oil joint venture

# Data Flow

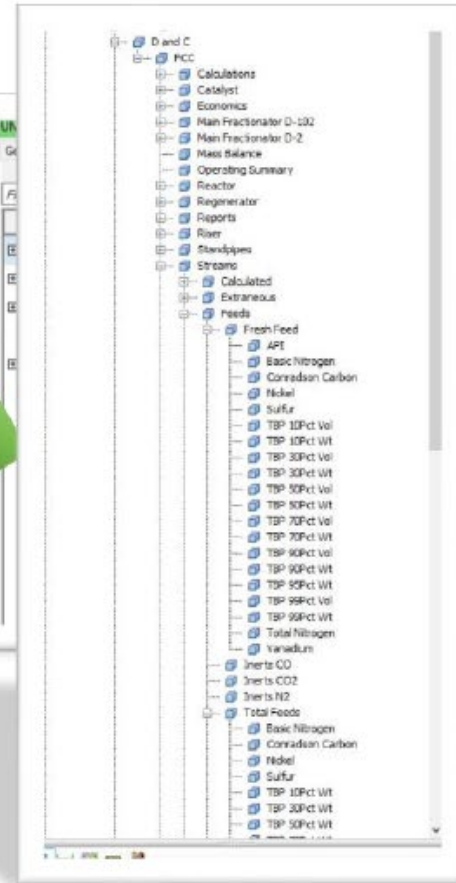

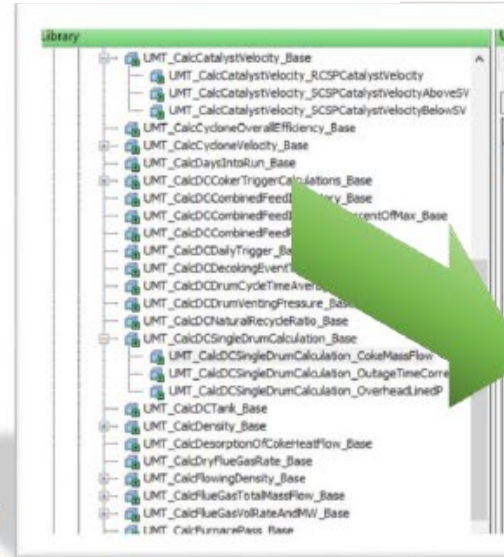

High Fidelity Historical Process Data

PI Vision used to provide self serve access to contextualized operational intelligence.

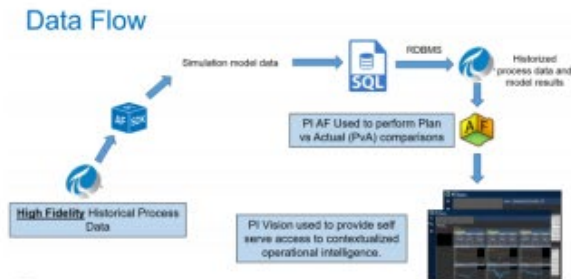

# PI AF Template-based Solution

- **Leveraging the power of PI AF Templates of many flavors:**  
Elements, Analyses, Event Frames
  - Many commonalities across unit types
  - Unit-to-unit variations captured
- **Not just *physical* assets**
  - Product Streams, Yields, etc.
- **Dynamic and centrally managed design**
  - Standardized design library for deployment
  - Adaptable design, can evolve with business needs
  - Iterative approach to continuously improve the solution

# Best Practices in Integration of Modeling Software with PI AF

## CHALLENGE

Integrating PI System data with model data and comparing to actuals

- Different tools/spreadsheets with different data available
- Quality and consistency of monitoring varies
- Level of effort to maintain

## SOLUTION

Integrate modeling data with the PI System to provide high fidelity, quality, rich dataset for trending, analysis, monitoring, optimization

- PI SDK to load high fidelity data in model
- PI RDBMS: interface to bring in modeling data back into the PI System
- PI AF: templatize and standardize process data, calculations, and analytics
- PI Vision: standard KPI, economic, summary displays

## RESULTS

Improved KPI monitoring, optimization, and model usage resulting in improved economic performance

- Improved performance
- Data transparency
- Empowerment of SMEs with self serve access to model effectiveness

# Ship Builder & Solution Provider:

## Crew Training System

### COMPANY and GOAL

DELFI ILS has to support the logistics in a highly complex system delivery adopting SHIPVIEW as a single, scalable and extensible platform

### CHALLENGE

A single tool to manage all the information

- Data fragmentation & heterogeneity
- Ship automation integration
- Simulation functionalities

### SOLUTION

SHIPVIEW: 3D Localized Multi Media Asset Manager

- Visual reference to reality
- Embedded real-time data as well as data support to simulation
- Visual reference to technical docs

### RESULTS

Entire ship information assets in one place ready to use

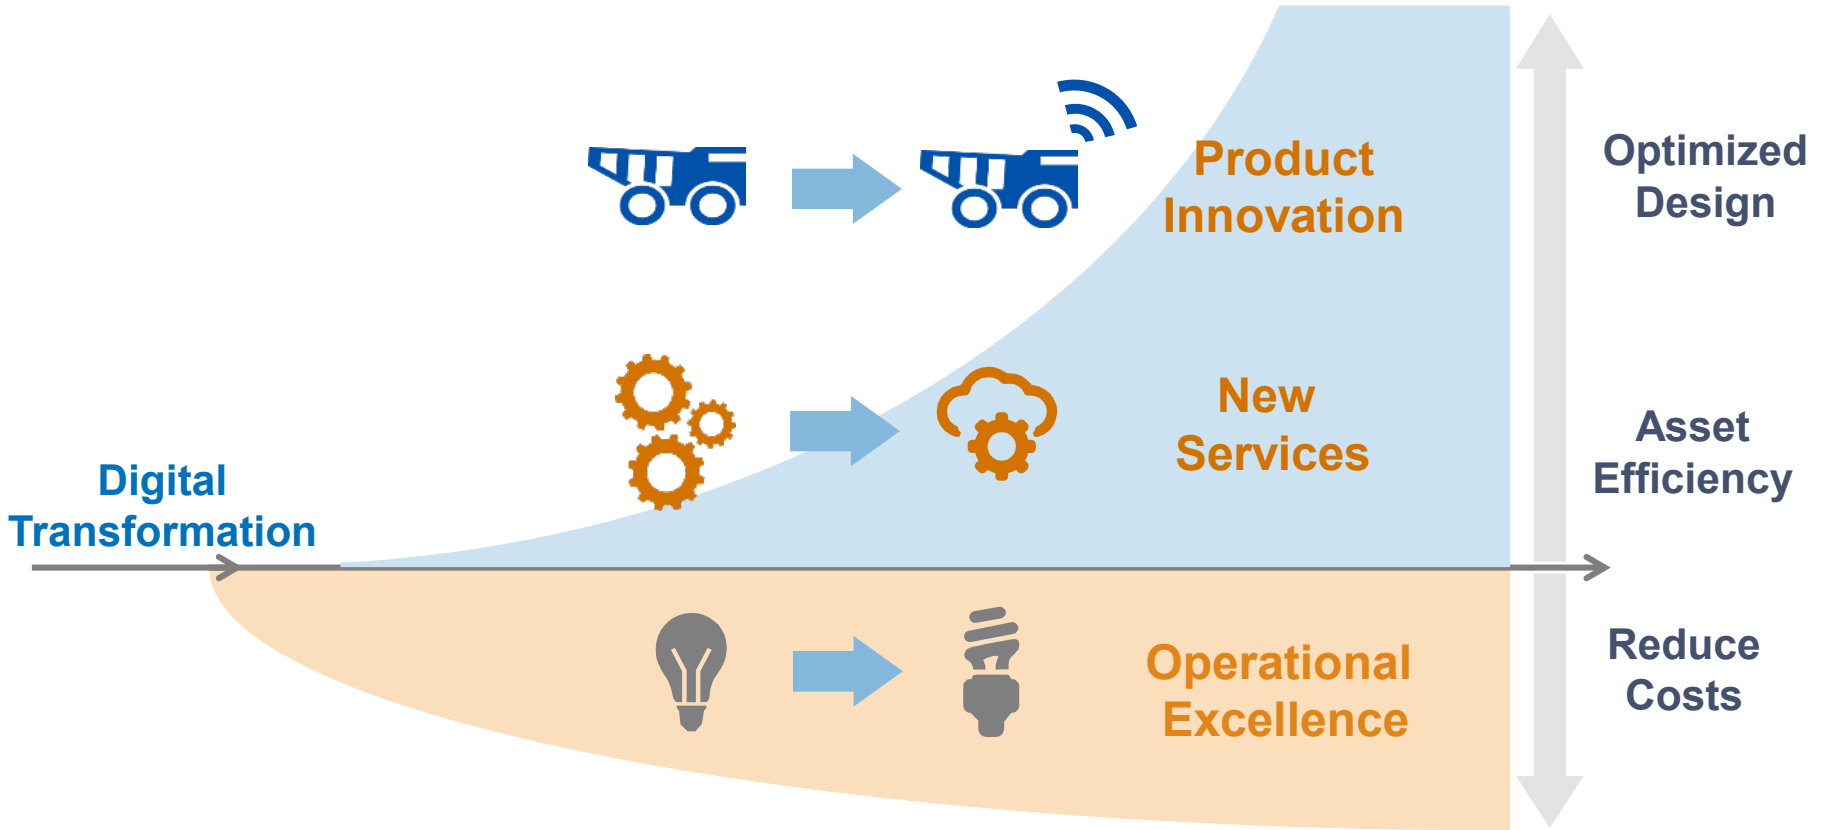

- Process data (real-time and for simulation)
- 200 operative manuals
- 40K spare parts
- 10K operative procedures video
- 6K technical drawings

CAT

Source: OSIsoft User Conference 2017 Presentation: <https://www.osisoft.com/pi-system/case-studies-and-testimonials/all-case-studies/caterpillaruc2017story/>

# CONNECTED INSIGHT: CAT<sup>®</sup> ASSET INTELLIGENCE

-  **PREDICT & AVOID FAILURES**
-  **OPTIMIZE MAINTENANCE**
-  **REDUCE FUEL & OPEX**
-  **ENSURE COMPLIANCE**
-  **CREATE TRANSPARENCY**

# CASE STUDY

## OPTIMIZE HULL CLEANING

Marine growth increases hull resistance, significant fuel cost driver

Environmentals make analysis difficult - typically practice is time based scheduling

**RoRo vessels, Fuel is 70%+ of costs**

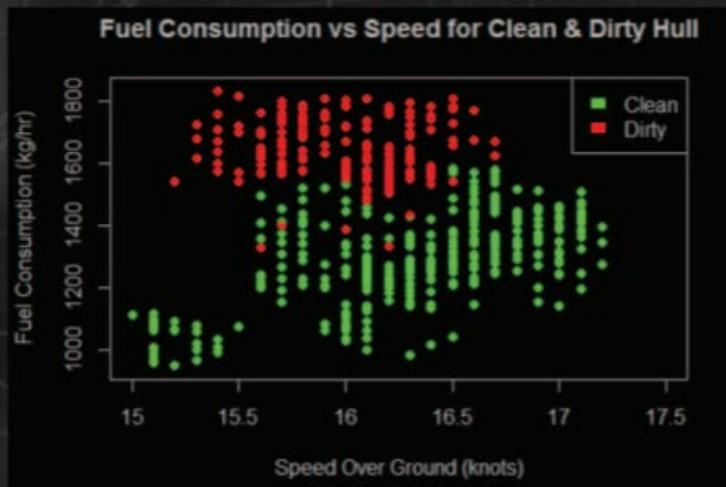

# CASE STUDY

## OPTIMIZE HULL CLEANING

Marine growth increases hull resistance, significant fuel cost driver

Environmentals make analysis difficult - typically practice is time based scheduling

Used R & weka to account isolate for hull condition impact  
Configured Asset Intelligence for continuous analysis

Using data analytics to shift to optimal / condition based cleaning:

**\$450K+**  
per vessel

# Takeaways

- *Optimize “brownfield” in parallel to “greenfield” scenarios*
- *Contextualize operational data to also serve engineering*
- *Use digital environment with operational data to train employees*
- *Optimize equipment performance with after service providers*
